CONCENTRATED STABILIZED QUICK DISSOLVING ONE-A-DAY SWIMMING
POOL CHLORINATING TABLETS

For use in feeders, skimmers or floaters. (Do not add directly into pool. Avoid metal objects. Use only in skimmer or feeder which has been thoroughly cleaned. Do not mix with other chemicals in skimmer or feeder.)

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. One-A-Day Tablets, containing 56% available chlorine, are designed to dissolve in approximately 15 minutes and to provide a source of chlorine in swimming pools. One-A-Day Tablets control growth of algae and effectively kill many bacteria thus helping to keep the pool in a sanitary condition. One-A-Day Tablets weigh approximately 2 ounces. If any chlorine residual is present, it is possible to increase the residual in pool water by approx. 1 ppm by using one tablet per 10,000 gallons of water.

For best results, place One-A-Day Tablets in the feeder following the manufacturer's directions or into a dissolving basket, floating container or the plastic leaf strainer of the surface skimmer. Do not permit tablets to contact plastic pool lining or metal objects. Do not throw tablets directly into the pool.

START UP

In a clean pool with no visible algae, bring chlorine residual to 1.0-1.5 parts per million (ppm) as follows:

1. For each 10,000 gallons of water, put three One-A-Day Tablets (approx. 6 oz.) in a plastic leaf strainer or the surface skimmer.
2. Run pump and filter until tablets are totally dissolved. An alternate method is to use Burn Away Shock Treatment for start up. Follow label directions.
3. Test for chlorine residual using a suitable test kit.
4. If chlorine residual is below 1.0 ppm, add one tablet per 10,000 gallons, wait until dissolved and check residual. Pool can be used when residual is between 1.0 and 3.0 ppm.
5. The day after the pool's chlorine residual reaches 1.0-1.5 ppm use cyanuric acid (e.g. Conditioner and Stabilizer) to stabilize your pool. Follow label directions. Adjust pH to the ideal range of 7.2-7.6. These tablets reduce the need for additional chemicals to adjust pH. Rain, make-up water, wind blown dust or heavy pool use may alter the pH of the pool.

SIDE PANEL

CONCENTRATED STABILIZED QUICK DISSOLVING ONE-A-DAY SWIMMING
POOL CHLORINATING TABLETS

An alternate procedure is to use Quick Dissolving Stabilized Granular Swimming Pool Chlorinator to achieve initial chlorine residual of 1.0-1.5 ppm. Follow label directions for start up and then follow Step 5 above.

Regular Care - Place One-A-Day Tablets in feeder following feeder manufacturer's directions. Alternately, place one tablet (approx. 2 oz.) in a skimmer or floater for each 10,000 gallons of water as needed to maintain the pool's chlorine residual from 1.0-1.5 ppm.

STORAGE AND DISPOSAL: Keep product dry in tightly closed container when not in use. Store in a cool, dry, well-ventilated area away from heat or open flame. Do not reuse empty container. Rinse empty container thoroughly with water to dissolve all material before discarding. Place in trash collection or dispose in approved landfill area or bury in a safe place. EMERGENCY HANDLING: In case of contamination or decomposition, do not reseal container. If possible, isolate container in open and well-ventilated area. Flood with large volumes of water. Dispose of contaminated material in an approved landfill area or bury in a safe place.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

DANGER: Highly corrosive. Causes skin and eye damage. May be fatal if swallowed. Do not get in eyes, on skin, or on clothing. Do not handle with bare hands. Wear goggles or face shield and use rubber gloves or only thoroughly clean, dry utensils when handling. Irritating to nose and throat. Avoid breathing dust and fumes. Remove and wash contaminated clothing before reuse.

FIRST AID: (PRACTICAL TREATMENT)

If swallowed: Feed large amounts of milk and/or water and induce vomiting. Call a physician immediately.

If on Skin: Brush off excess chemical and flush skin with cold water for at least 15 minutes. If irritation persists, get medical attention.

If in eyes: Flush with cold water for at least 15 minutes. Get immediate medical attention.

If inhaled: Remove person to fresh air. Get immediate medical attention.

CHEMICAL HAZARDS

DANGER: Strong oxidizing agent. Use only clean, dry utensils. Mix only into water. Contamination with moisture, dirt, organic matter or other chemicals (including other pool chemicals) or any other foreign matter may start a chemical reaction with generation of heat, liberation of hazardous gases and possible generation of fire and explosion. Avoid any contact with flaming or burning material, such as lighted cigarette. Do not use in any chlorinating device which has been used with any inorganic or unstabilized chlorinating compounds (e.g. calcium hypochlorite). Such may cause fire or explosion. Do not come in contact with plastic pool linings or metal objects. Do not throw directly into pool.

PETROKEM CORP., 59 SPRUCE STREET, PATERSON, N.J. 07509

SIDE PANEL

ENVIRONMENTAL HAZARD:

This product is toxic to fish. Do not discharge into lakes, streams, ponds, or public waters unless in accordance with an NPDES Permit. For guidance contact the regional office of EPA.

ADDITIONAL POOL CARE RECOMMENDATIONS:

pH - Maintaining pH in the ideal range of 7.2-7.6 is extremely important to the efficacy of your chlorine and swimming comfort. Test for pH often with a suitable test kit. Adjust pH as necessary, using products such as pH Minus or pH Plus.

SUPERCHLORINATION - Superchlorination with a calcium hypochlorite product such as Burn Away Shock Treatment and Super Chlorinator is recommended to burn out the organic material your filter can't handle and keep your water sparkling clear. Use as directed on the label, especially during excessive heat, when bathing loads are high, when water becomes dull looking or hazy, when there is a "chlorine" like smell or excessive eye irritation or after heavy rains.

SHOCK TREATMENT - If algae appear, shock treat your pool with a calcium hypochlorite product such as Burn Away Shock Treatment and Super Chlorinator. Follow label directions. An alternate method is to put 10 Tablets (approx. 20 oz.) in the skimmer for each 10,000 gallons of water. Run pump and filter until totally dissolved (approx. 15 minutes). Thoroughly clean pool by scrubbing surface of algae growth, vacuum and cycle through filter. Pool should not be used until chlorine residual is from 1.0-3.0 ppm.

TO DETERMINE POOL CAPACITY:

Rectangular Pools: Multiply length x width x average depth x 7.5 = pool capacity (U.S. gallons) Round pools: Multiply radius ($\frac{1}{2}$ diameter) x radius x average depth x 21.5 = pool capacity (U.S. gallons).
