

FASCO De-Ka-Go — The Liquid Skin, for pruning wounds and injuries to trees, and shrubs. Protects wounds against disease and decay. Contains powerful fungicide. Encourages growth of healing tissue. Reduces loss of moisture.

DIRECTIONS

Wipe wound surface clean and dry with clean cloth if necessary. Apply a smooth, heavy coat of De-Ka-Go, not thick enough to run. Use a small paint brush or a dauber made by wrapping string around end of a stick. Extend the treatment one-fourth inch beyond the edges of the wound. A second coating a few days later may be helpful if most of the first coat penetrates the wood.

KEEP CONTAINER CLOSED TIGHTLY WHEN NOT IN USE.

DIRECTIONS—For Thinning

If De-Ka-Go becomes too thick to apply conveniently with a brush it may be thinned by stirring into it a small amount of water. Stir diligently while the water is being added and do not add more than the smallest amount necessary to reduce to a thick paste consistency. It will be noted that merely stirring the material tends to "thin" it.

CAUTION

Harmful if Swallowed.

CONDITIONS OF SALE

All statements concerning the use of this product apply only when used as directed. The manufacturer makes no warranties, expressed or implied, concerning this product or its use, which extend beyond the description on the label. Read all directions carefully.
