HOW TO USE

FOR BEST RESULTS, FOLLOW THE 5 SIMPLE STEPS:

1. Apply 10 lbs. of Turf 'N Tree Food per 1,000 sq. ft. of lawn area. Spread by 50 feet or an equivalent of 100 feet in two passes. The established lawn area can be covered by 50 feet or an equivalent of 100 feet.
2. Apply 10 lbs. of Turf 'N Tree Food per 1,000 square foot area of lawn. Spread by 50 feet or an equivalent of 100 feet in two passes. The majority of the product in each pass should be applied to the lawn area. Apply the remaining amount to the lawn area uniformly to obtain the most satisfactory results. For uniform distribution, use a lawn spreader. The spreader should be adjusted to give a 1/2 inch of product per 1,000 sq. ft. of lawn area.
3. Water the lawn immediately after application. This will help the product to penetrate the soil and reach the roots of the grass.

WHERE TO USE

SPREADER SETTINGS INFORMATION

If application is being made with a broadcast spreader, best results are obtained by using setting 5 for the 2,500 sq. ft. spreader. This method is to spread half the contents of this bag over the 2,500 square foot area and the other half over the same area in reverse or at right angles to the first application. This is the equivalent of one full bag on the 2,500 square foot area.

Make & Model	APPROXIMATE SETTINGS	
	Over or Under 2,500 sq. ft. of area	Over or Under 5,000 sq. ft. Coverage
Kerr-McGee Super 8	5	5
Hubbard-Hall Super 22	5	5
Kerr-McGee Model B	5	5
