DIRECTIONS FOR SPOT APPLICATION ONLY

Roaches, Waterbugs, Ants, Silverfish, and Certain Other Crawling Insects:
Thoroughly wet by brushing or spot spraying into cracks, crevices, behind baseboards, mouldings, around window and door frames. Spray underneath and behind sinks, furniture, refrigerators, cabinets, stoves, garbage containers, and around all pipes where insects may enter. For best results basements should be treated in the same manner.

Flies, Mosquitoes, Flying Moths, Wasps and Other Flying Insects:

INDOORS:—Thoroughly and repeatedly treat selected surfaces such as doors, around windows and areas frequented by these insects.

OUTDOORS:—To prevent entry of these insects into human dwellings, thoroughly treat screens, window frames, door sills and selected areas of porches where these insects tend to alight or congregate. Repeat applications as necessary to obtain the maximum value against these pests since insecticidal residues on the outside of buildings tend to deteriorate quite rapidly.

CAUTION:— **KEEP OUT OF REACH OF CHILDREN.**
Harmful if swallowed. In case of contact with skin, wash with soap and water. Avoid breathing spray mist. Avoid contamination of feed and foodstuffs. Do not use or store near heat or open flame. **DESTROY BOTTLE WHEN EMPTY.**

FOR SPOT SPRAYING ONLY

Mehle's Liquid Insecticide should not be applied directly on asphalt tile, siding or other asphaltic base materials, as the petroleum distillates in this insecticide will tend to soften and discolor them.

Antidote: External—wash with soap and water. Internal—drink emetic or mustard—call physician.

ACTIVE INGREDIENTS: 100%

Petroleum Distillate
*Chlordane technical
2-Butoxyethanol

n-Octyl sulfoxide of isosafrole and
related compounds
Pyrethrins

U.S.D.A. Reg. #2349-5

*Consists of octachloro-4,7- methano -
tetrahydroindane and related compounds.
