Spray over the entire haircoat making sure the coat is thoroughly wetted down to the skin. Spray against the lay of the hair, ruffling the coat on long-haired dogs. Weight of dog, length of hair and density of coat will determine amount of spray to be applied to wet the skin (average dose approximately 1.5 g/kg). This 8 oz. bottle should be sufficient for ten applications at one to two week intervals to an average 30-35 lbs. dog. Lighter applications will reduce period of effectiveness and require more frequent treatment. Allow dog to air dry or blow dry. Do not towel dry.
