Company

**READ ENTIRE LABEL BEFORE EACH USE PRECAUTIONARY STATEMENT
HAZARDS TO HUMANS AND DOMESTIC ANIMALS CAUTION** Do not use on
puppies or kittens under 3 months of age. Consult a veterinarian before treating pregnant,
nursing, sick, aged, debilitated or medicated dogs. Sensitivities may occur after using any
pesticide product on pets. If signs of sensitivity occur, bathe pet with mild soap or a
non-pesticidal shampoo and rinse with large quantities of water. If signs continue consult
a veterinarian immediately. Wash hands with soap and water after using.

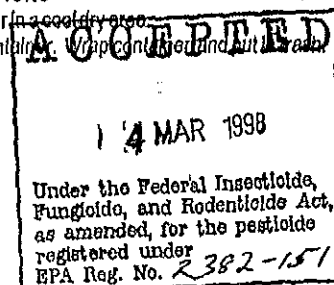

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
The insect growth regulator (a synthetic flea hormone), pyriproxyfen, sterilizes all fleas that
jump onto the pet (even new fleas before they start laying eggs) and therefore kills all flea
eggs. Pyriproxyfen is adsorbed onto, and sticks tightly to hair and skin, even after
complete rinsing, to provide 8 weeks of continuous flea ovisterilant efficacy. This breaks
the flea's life cycle by preventing the development of new fleas in the pet's environment
and the build-up of reinfestation pressure. This shampoo is therefore designed primarily
for routine, year-round bathing of pets that may, at some time, be exposed to a flea
infested environment. As a flea control measure, it works best when routine treatment
is started before the flea season, or in a presently flea-free environment. Nevertheless,
repeated treatment (at least every 8 weeks) of a flea-infested pet will kill all flea eggs and
will after one, or at most two, treatments interrupt the flea life cycle and eradicate fleas.
However, it may be advisable instead to treat infested pets (especially those infested also
with ticks) with a shampoo that also contains an insecticide to kill existing fleas (and ticks),
for instance Virbac's Pyriproxyfen-Permethrin Shampoo for dogs and puppies or Virbac's
Pyrethrin-Pyriproxyfen Shampoo for cats, kittens, dogs and puppies. This will speed the
flea eradication process and also provide relief from flea (and tick) bites.

APPLICATION: Shake well before using. Wet the pet thoroughly with warm water.
Apply product onto its back at the rate of approximately 1 tablespoonful for each 5 lb.
bodyweight (7.5 g per kg) for dogs and puppies and at 1 1/4 tablespoonful (8.5 g/kg) for cats
and kittens. Massage well into the skin to obtain good lathering over the entire body.
Allow lather to remain in contact for at least 10 minutes then rinse off. Allow pet to air
dry or blow dry. To maintain effective flea life cycle control, repeat treatment at least
every 4 weeks, but not more than once every 14 days.

STORAGE AND DISPOSAL DIRECTIONS

STORAGE: Store in closed container in a cool dry place.
DISPOSAL: Do not reuse empty container. Wrap container and put in trash.
Lot No. on bottom of container
