DIAZINON SEED PROTECTANT

For the protection of seed and germinating seedlings of corn, peas, soybeans and beans from damage by seed corn maggots and protection of corn from damage by seed corn beetles.

This product contains graphite to assist in accurate planting.

MEASURING CUP ENCLOSED

DIRECTIONS FOR USE

Corn—To protect germinating seeds and seedlings against seed corn beetles and seed corn maggot, apply 3-4½ ounces Diazinon Seed Protectant per bushel of seed (one level measure equals 1½ ounces) at planting time, either by thoroughly mixing in a box or tub or by dusting it over the seed as it is dumped into the planter box.

Peas, Soybeans and Beans (Lima, Snap, White and Kidney)

SEED CORN MAGGOTS: Mix 1 1/2-3 oz. per bushel of seed as a dry mixture in the planter box as a seed treatment prior to planting.

Thoroughly stir the product with a paddle or lath onto the seed so that each seed is coated with the seed protectant. If temperature is high and soil moisture is low, reduce dosage to one-half, especially for mid-season planting. **DO NOT USE BARE HANDS.**

Diazinon Seed Protectant should be applied in conjunction with or over an approved fungicidal seed treatment, but do not use on seed already treated with an insecticide. Plant within one month of treatment.

Under some circumstances Diazinon Seed Protectant may affect the rate of seeding. It is necessary for the user to check planting rate frequently to assure himself that the desired planting rate is being obtained.
