

Use 1 to 2 pounds for flea beetles, Japanese beetles and leafhoppers. To control six-spotted leafhopper (water yellowish vector) apply 2 to 3 pounds in a 5 to 7-day schedule.

Use 2 to 4 pounds for armyworms, cabbage caterpillars, corn earworm, tobacco plant bug and other bugs. For optimum control of corn earworm after tobacco buds begin to form, use 4 pounds in a 5 to 7-day schedule.

Where cabbage looper is the principal problem, use an alternative pesticide that is specifically recommended. For control of small cabbage loopers in commercial plantings after edible portions begin to form use 2 to 4 pounds in a 5 to 7-day schedule.

#### TOBACCO INSECT CONTROL

##### IN PLANT CROPS

For tobacco flea beetles, use 4 level tablespoons per gallon OR 2 pounds per 50 gallons, and apply 6 gallons per 100 square yards.

For green June beetle grubs, use 1 pound per 100 gallons of water, when insects or their damage appear. Apply to areas that larvae have attacked by spraying as a drench at 50 to 100 gallons per 100 square yards. May be applied before or after seeding.

##### GR FIELD

For budworms, flea beetles, Japanese beetles, June beetles and hornworms, use 2 to 4 pounds in 50 to 100 gallons of water per acre. Full coverage of plants is essential. Use lower rate on young plants up to knee high; higher rate on mature plants. Begin treatments when worms are small. Avoid excessive application in bed of plant as plant injury may result.

Treated fields may be entered immediately after foliage has dried. If late applications are necessary, allow three days before pruning or cutting.

#### ORNAMENTAL INSECT CONTROL

SEVIN 50W at recommended concentrations can be safely used on a wide range of ornamental plants, flowers, shrubs and shade trees including rose, carnation, gladiolus, zinnia, chrysanthemum, lily, azaleas, juniper, hibiscus, maple, oak, magnolia, redwood, birch and pine. SEVIN injures bees (see below).

Use 2 pounds per 100 gallons when insects or their damage appear. Repeat weekly or as needed to control.

apple aphid	Japanese beetles	plant bugs
bagworm	June beetles	plus caterpillars
birch leaf miner	lace bugs	pyralids
bitter beetles	leafhoppers	rose aphid
beetle bug	leaf rollers	rose-feeding
beeweed leaf miner	mealy bugs	scale insects
clematis leaf aphid	mimosa webworm	tent caterpillars
clematis leaf beetle	oak leaf miners	thorn bugs
flea beetles	orange tortrix	thrips (especially)
gray moth	periwinkle caterpillar	willow leaf section

# 50-W INSECTICIDE

## A WETTABLE POWDER FOR CONTROL OF INSECT PESTS

CODE 9579

USDA REG. NO. 218-577

ACTIVE INGREDIENT: Carbaryl (1-naphthyl N-methylcarbamate). . . . . 50.00%

INERT INGREDIENTS: . . . . . 50.00%

## CAUTION

KEEP OUT OF REACH OF CHILDREN AND ANIMALS.

HARMFUL IF INHALED OR SWALLOWED. Do Not Breathe Dust. Do Not Take Internally. Avoid Prolonged or Repeated Breathing of Spray.

SKIN CONTACT MAY BE HARMFUL. Avoid prolonged or repeated contact with skin. Wash thoroughly after handling. Wash Hands and Face Before Eating. Take Shower or Bath After Work. Wear Regular Long Sleeved Work Clothing. Change to Clean Clothing Daily.

NOTE FOR PHYSICIAN: Carbaryl is a moderate, reversible, cholinesterase inhibitor. Atropine is antidotal.

AVOID CONTAMINATION OF FOODSTUFFS. Avoid contamination of food, feed, feeding troughs and watering receptacles.

U. S. Pat. No. 2,903,478

ALLIED CHEMICAL CORPORATION  
DEPARTMENT AG  
40 RECTOR STREET, NEW YORK, N.Y. U.S.A.

MADE IN U.S.A.

9579  
A 1402A

PRINTED IN U.S.A.

"Sevin" is a registered trade mark of Union Carbide Corporation for the active ingredient (Carbaryl).

Use 2 to 3 pounds for armyworms, corn earworm, slugs bugs and webworms. On pastures only use 4 lbs. for corn earworm. Apply 4 applications beginning at first bloom and at 5 day intervals thereafter. To avoid possible injury on tender foliage, do not apply when foliage is wet or when rain or excessive humidity is expected during the next two days.

#### FORAGE GRASSES AND PASTURE

Use 2 to 3 pounds for armyworms, and slugs. For thrip control in grasses grown for seed, high spray pressure may help penetration into boot.

#### SORGHUM (including MILK AND GRAIN SORGHUM)

Use 2 to 4 pounds for armyworms, corn earworm, slugs bugs and webworms. For optimum insect control on grain sorghum direct spray into the forming heads. Use 3 pounds for grain sorghum. Treatment for sorghum ridge control should be made 3 to 4 days after heads have emerged from boot.

#### SUGAR BEETS

Use 2 to 4 pounds for armyworms, leafhoppers and webworms.

#### GRASSHOPPERS

Apply 1 to 3 pounds as often as necessary to control grasshoppers on the above crops. A 1 to 2 pound rate is suggested for nymphs on small plants or sparse vegetation in wasteland, rangeland, ditchbanks and borders. A 2 to 3 pound dosage should be used when grasshoppers are mature or material is applied to crops requiring greater coverage.

#### NOTE

1. Compatible with commonly used insecticides such as lead arsenite, DDT and other chlorinated hydrocarbons; Orthene, malathion, parathion and other organic phosphates and botanicals; also with such fungicides as phosdrin, organo-mercury compounds, fixed copper, dithiocarbamates, sulfur, captan, Cypro and phthalin. Compatible with petroleum oil as used in common practice on citrus with the above pesticides.
2. Unstable under highly alkaline conditions. Not effective if used with alkaline materials such as Bordeaux, lime, lime sulfur and calcium-hydrogen spreaders.
3. Some phytotoxicity may occur on tender foliage in the presence of rain or high humidity of several days duration following spraying.
4. Does not control spider mites but is compatible with all common miticides.
5. For protection of honeybees avoid use, if possible, during periods when honeybees are visiting the crop or neighboring crops. When necessary to use during such periods, warn beekeepers well in advance to locate hives at a safe distance (beyond bee flight range) until one week after application.

Follow directions carefully. Timing and method of application, weather and crop conditions, mixtures with other chemicals not specifically recommended, and other influencing factors in the use of this product are beyond the control of the seller. Buyer assumes all risks of use, storage or handling of this material not in strict accordance with directions given herewith.

## DIRECTIONS

### READ ENTIRE LABEL. USE IN STRICT ACCORDANCE WITH LABEL DIRECTIONS AND CAUTIONS. PREHARVEST AND GRAZING USE LIMITATIONS

No post-treatment time limitations on applications to alfalfa, beans, blueberries, carrots, clovers, corn forage or fodder, cornups, cucumbers, eggplants, fava beans, garlic, grapes, melons, pasture, peas, peanuts, peppers, potatoes, pumpkins, sorghum grown for forage, soybeans, sunflowers, sweet corn, turnips, and to green fodder of wheat, oats, barley and rye for use as pasture or feed for livestock. Allow 3 days between spraying and harvest of apples, peaches, cherries, cranberries, pears, plums, prunes and strawberries. Allow 3 days between spraying and harvest of apricots, blueberries, Brussels sprouts, cabbage, cantaloupe, cantaloupe, honeydew, nectarines, potato beets (beets), lemons, mandarins, oranges, radishes, rutabaga, safflower (peas) and turnips (peas). Allow 7 days between application and harvest of blackberries, boysenberries, dewberries, gooseberries and raspberries. Allow 14 days between last application and harvest of sugar beets, Chinese cabbage, collards, dandelion, endive (escarole), garden beets (beets), kale, leaf lettuce, mustard greens, parsley, safflower (peas), spinach, Swiss Chard and turnips (peas). Allow 21 days between last application and harvest of sorghum grain.

If SEVIN insecticide is used in accordance with label directions, the above crops including barley straw, bean vines, carrot tops, cornups hay, oat straw, pea vines, peanut hay, rye straw, safflower hay, sugar beet tops and wheat straw may be grazed or harvested for use as feed for dairy and meat animals without resulting in residues in milk or meat. Tolerances established under the Federal Food Drug and Cosmetic Act permit the sale of crops bearing probable SEVIN residues when SEVIN is used in accordance with label directions.

### TREE FRUIT INSECT CONTROL

Recommended dosages refer to pounds of SEVIN 50W per 100 gallons dilute spray. Keep spray mixtures well agitated. Apply for full coverage in normal spray schedules.

**APPLES AND PEARS—West of the Rocky Mountains:** Use 1½ to 2 pounds for apple sucker, green apple aphid, woolly apple aphid, bagworm, California peach moth, codling moth, apple rust mite, pear leaf blister mite, pear rust mite, eye-spotted bud moth, green fruit worm, Lygus bugs, orange tortrix, pear psylla, tentiform leaf miners, Lecanium scales, oyster-shell scale, and San Jose scale. For optimum scale control, apply when crawlers are present. For psylla control, apply when eggs hatch or when young nymphs are present. When heavy aphid infestations are present, repeated applications may be necessary for optimum control.

Application of SEVIN within 30 days after full bloom may also provide fruit thinning; to avoid this, delay use until at least 30 days after bloom. Foliar injury may result from combination with summer oils.

**East of the Rocky Mountains:** Use 1 pound for apple mealybug, green apple aphid, codling moth and white apple leafhopper. When heavy aphid infestations are present, repeated applications may be necessary for optimum control.

Use 2 pounds for apple maggot, bagworm, eastern tent caterpillar, European apple sawfly, eye-spotted bud moth, fruit tree leaf roller, green fruitworm, Japanese beetle, pear psylla, periodical cicada, plum curculio, red-banded leaf roller, rosy apple aphid, woolly apple aphid, apple rust mite, pear leaf blister mite, pear rust mite, tarnished plant bug, tentiform leaf miners, Forbes scale, Lecanium scales, oyster-shell scale, and San Jose scale. For optimum scale control, apply when crawlers are present. To control rosy apple aphid, apply before leaves are curled.

Application of SEVIN within 30 days after full bloom may also provide apple thinning. To avoid this, delay use until at least 30 days after bloom. May cause foliar injury if used before second cover on York and McIntosh apples.

**APPLE THINNING:** Many factors influence the degree of apple thinning obtained with SEVIN. These include tree age, variety and nutrition, previous crop, pruning, degree of set, bloom, weather and use of other chemical thinners. When any of these favor reduced fruit set, caution should be observed in applying SEVIN so that excessive thinning and possible yield reduction will not occur. Recommended dosages refer to pounds of SEVIN 50W per 100 gallons dilute spray.

**Concentration:** Use ½ to 1 pound on easily thinned varieties. Apply for full coverage. On hard to thin varieties, use 1 to 2 pounds.

**Timing:** Apply in one spray timed between 10 and 25 days after full bloom.

**Varietal response:** Easily thinned varieties include Cortland, Grimes, Jonathan, McIntosh, Orleans, Rome Beauty, Pippin, Red Delicious, Winesap, and Yellow Newton. Difficult to thin varieties include Baldwin,

### SMALL FRUIT INSECT CONTROL

Recommended dosages refer to pounds of SEVIN 50W per acre. Use sufficient spray gallonage to obtain full coverage. Keep spray mixtures well agitated. Apply when insects or their damage appear. Repeat at 7 to 10-day intervals or as necessary. Do not use more than the recommended number of pounds per acre.

**GRAPES—** Use 2 to 4 pounds for European fruit lecanium, grape leaf folder, grape leafhopper, and grape leaf skeletonizer. Apply just before first broad leaf folder larvae emerge from rolls and as needed for leafhoppers. Use 4 pounds for grape berry moth, Japanese beetle, June beetles and red-banded leaf roller. A dilute spray of 200 gallons per acre is suggested.

**STRAWBERRIES—** Use 2 to 4 pounds for meadow spittlebug, strawberry leaf roller and strawberry weevil. A dilute spray of 100 to 200 gallons per acre is suggested.

**BLUEBERRIES—** Use 3-4 pounds for blueberry maggot, cherry and cranberry fruitworms, European fruit lecanium and Japanese beetle. Apply 3 weeks before harvest and repeat 10 days later or as necessary. A dilute spray of 125 to 150 gallons per acre is suggested.

**Cranberries—** Use 3-6 pounds for cutworms, fireworms, fruitworms, Japanese beetle and leafhoppers. Apply in late bloom and as needed at 7 to 10-day intervals. A dilute spray of 300 gallons per acre is suggested.

**BLACKBERRIES, BOYSENBERRIES, DEWBERRIES, LOGANBERRIES AND RASPBERRIES—** Use 4 pounds for Japanese beetle, leaf rollers, leafhoppers and raspberry aphid. A dilute spray of 100 to 200 gallons per acre is suggested.

### VEGETABLE INSECT CONTROL

Suggested dosages refer to pounds of SEVIN 50W per acre. Where a dosage range is indicated, use lower rate on young plants; higher rate on mature plants. Use sufficient spray gallonage to obtain full coverage. Keep spray mixtures well agitated. Apply when insects or their damage appear. Repeat at 7 to 10-day intervals or as necessary unless shorter interval is specified below.

**ASPARAGUS—** Use 2 to 4 pounds for asparagus beetle on seedlings or spears.

Use 4 to 8 pounds for asparagus beetle and Apache cicada on ferns or brush growth in the post-harvest period. Do not apply more often than once every three days.

**BEANS—** Use 1 pound for Mexican bean beetle; 2 pounds for bean leaf beetle; cucumber beetles, flea beetles, Japanese beetle, leafhopper, velvet-bean caterpillar, and western bean cutworm.

Use 2 to 3 pounds for armyworms, corn earworm, stink bugs and tarnished plant bug.

**CORN—** Use 2 to 4 pounds for corn earworm, corn rootworm adults, European corn borer, fall armyworm, tea beetles, Japanese beetle, sap beetles and leafhoppers.

woolly apple aphid, apple rust mite, pear leaf blister mite, pear root mite, tarnished plant bug, leafhopper leaf miners, Forbes scale, Lecanium scales, oyster-shell scale, and San Jose scale. For optimum scale control, apply when crawlers are present. To control rosy apple aphid, apply before leaves are curled.

Application of SEVIN within 30 days after full bloom may also provide apple thinning. To avoid this delay use until at least 30 days after bloom. May cause foliar injury if used before second cover on York and McIntosh apples.

**APPLE THINNING** — Many factors influence the degree of apple thinning obtained with SEVIN. These include tree age, variety and nutrition, previous crop, pruning, degree of set, bloom, weather and use of other chemical thinners. When any of these favor reduced fruit set, caution should be observed in applying SEVIN so that excessive thinning and possible yield reduction will not occur. Recommended dosages refer to pounds of SEVIN 50W per 100 gallons dilute spray.

**Concentration:** Use  $\frac{1}{2}$  to 1 pound on easily thinned varieties. Apply for full coverage. On hard to thin varieties, use 1 to 2 pounds.

**Timing:** Apply in one spray timed between 10 and 25 days after full bloom.

**Varietal response:** Easily thinned varieties include Cortland, Grimes, Jonathan, McIntosh, Orleans, Rome Beauty, Puritan, Red Delicious, Winesap, and Yellow Newton. Difficult to thin varieties include Baldwin, Ben Davis, Duchess, Early McIntosh, Golden Delicious, Lady Apple, Northern Spy, Rhode Island Greening, Steel Red, Turkey, Wealthy, Yellow Transparent, and York Imperial.

**PEACHES, APRICOTS AND NECTARINES** — Use 2 pounds for codling moth, cucumber beetles, European earwig, Japanese beetle, Pandemis moth, June beetles, lesser peach tree borer, orange tortrix, oriental fruit moth, peach twig borer, periodical cicada, plum curculio, fruit tree leaf roller, red-banded leaf roller, Platynota flavedana, tarnished plant bug, tussock moth, Lecanium scales, San Jose scale and olive scale. For optimum scale control, apply when crawlers are present. For lesser peach tree borer control, spray limbs and trunk thoroughly.

**PLUMS, PRUNES AND CHERRIES** — Use 2 pounds for black cherry aphid, mealy plum aphid, cherry fruit fly, cherry fruitworm, eye-spotted bud moth, fruit tree leaf roller, red-banded leaf roller, Japanese beetle, lesser peach tree borer, peach twig borer, plum curculio, prune leafhopper, brown soft scale, Forbes scale, Lecanium scales, oyster-shell scale, and San Jose scale. For optimum scale control, apply when crawlers are present. For lesser peach tree borer control, spray limbs and trunk thoroughly.

Use  $1\frac{1}{2}$  pounds for eastern tent caterpillar, codling moth, orange tortrix, and tussock moth.

For optimum control of codling moth, 1 pound per acre is suggested.

## VEGETABLE INSECT CONTROL

Suggested dosages refer to pounds of SEVIN 50W per acre. Where a dosage range is indicated, use lower rate on young plants; higher rate on mature plants. Use sufficient spray gallonage to obtain full coverage. Keep spray mixtures well agitated. Apply when insects or their damage appear. Repeat at 7 to 10-day intervals or as necessary unless shorter interval is specified below.

**ASPARAGUS** — Use 2 to 4 pounds for asparagus beetle on seedlings or spears.

Use 4 to 8 pounds for asparagus beetle and Apache cicada on ferns or brush growth in the post-harvest period. Do not apply more often than once every three days.

**BEANS** — Use 1 pound for Mexican bean beetle; 2 pounds for bean leaf beetle; cucumber beetles, flea beetles, Japanese beetle, leafhopper, velvet-bean caterpillar, and western bean cutworm.

Use 2 to 3 pounds for armyworms, corn earworm, stink bugs and tarnished plant bug.

**CORN** — Use 2 to 4 pounds for corn earworm, corn rootworm adults, European corn borer, fall armyworm, flea beetles, Japanese beetle, sap beetles and leafhoppers.

For larvae in whorl (budworm damage) and foliage feeders, apply to entire plant. Repeat as necessary.

For insects attacking silks and ears, apply at 2 to 3-day intervals starting when first silks appear and continuing until silks begin to dry. Three or more applications may be required depending on severity of infestation. Timing and good coverage are absolutely essential for effective control.

**CUCUMBER, MELONS, PUMPKIN AND SQUASH** — Use 1 to 2 pounds for pickleworm and melonworm; 2 pounds for cucumber beetles, flea beetles, leafhoppers, and squash bugs. Avoid excessive applications. Some leaf injury may occur if treatments are made when tender foliage is wet or in the presence of prolonged high humidity. SEVIN injures watermelons in Florida.

**PEAS** — Use 2 pounds for leafhoppers, and Colorado potato beetle. Apply to weeds in fields of garden peas to help prevent insect contamination in processed peas. Use 2 to 3 pounds for armyworms and grasshoppers.

**POTATO, TOMATO, EGGPLANT AND PEPPER** — Use 1 to 2 pounds for Colorado potato beetle, flea beetles and leafhoppers. Use 2 to 4 pounds for European corn borer, fall armyworm, lace bugs, tomato fruitworm, tomato hornworm, tarnished plant bugs and stink bugs.
