

## Applications:

Elko Algaecide is used to control the growth of algae in swimming pools. For maximum effectiveness, pools containing heavy growth of algae should be cleaned prior to using Elko Algaecide.

For pools having just visible algae growth add an initial dose of 24 to 37 fl. oz. of Elko Algaecide per 10,000 gal. of water and remove settled algae debris by cleaning. For treatment of a freshly cleaned and filled pool, add initially 13 to 24 fl. oz. of Elko Algaecide per 10,000 gal. of water. To maintain pools free of visible algae growth, subsequent additions of 9 fl. oz. of Elko Algaecide per 10,000 gal. of water should be made every 5 to 7 days after the initial treatment.

Uniform distribution of Elko Algaecide throughout the water in the pool is necessary for maximum effectiveness.

Elko Algaecide is compatible with those chemicals normally used to treat pools and is effective at both acid and alkaline pH. Elko Algaecide can be used in pools treated with chlorine chemicals and may reduce the amount of those chemicals normally required. However, do not mix Elko Algaecide with concentrated dry or liquid chlorine products.
