

DIRECTIONS

To operate, remove protective cap from top of can. Hold can upright about 2 to 4 inches from animal's hair. Be sure to protect animal's eyes from spray. Point opening on side of valve in desired direction for spray. To release spray, press down on valve.

ON DOGS: Move the bomb over the entire animal, using a "zig-zag" motion, until the coat is slightly damp. It may be advantageous, especially on long-haired dogs to run the hand against the lay of the hair, spraying into the ruffled hair directly behind the hand. 30 to 45 seconds of spraying is usually sufficient to bat a 30 lb. dog.

ON SMALL ANIMALS: Apply sparingly to cats, puppies and kittens, spraying only on the back.

FOR TICK CONTROL
SPRAY TICKS DIRECTLY. Repeat treatments if necessary; should not be more often than once weekly. Thoroughly spray interior of kennel or other sleeping quarters. Also spray bedding and replace with fresh bedding if necessary. This bomb makes a slight hissing sound and causes a cool sensation. This is temporary. Nervous dogs may become frightened the first time this bomb is used but soon become accustomed to the treatment.
