

Net Weight 6 lbs.

**HOLIDAY CRABGRASS KILLER**

kills growing crabgrass plants

Also Kills Dallis Grass (Paspalum), Yellow Foxtail  
and Goose Grass \*Immature)

**INSTRUCTIONS**

Crabgrass Killer must stick to the crabgrass leaves to be effective. If foliage is not moist, sprinkle before applying.

Use anytime Crabgrass appears in lawn. If second treatment is necessary use one week later.

Temporary browning of desirable grasses may occur but will recover with watering.

Do not sow grass seed for at least one week after applying. Do not use on St. Augustine, Centipede, Bahia and Carpetgrass.

Container Disposal: Do not reuse empty container. Destroy it by burying with waste or burning. Keep out of smoke.

**CAUTION:** Harmful if swallowed.

Avoid Breathing dust.

Avoid prolonged contact with skin or getting into eyes.

In case of accidental ingestion, severe skin or eye irritation, get medical attention.

After use, wash all exposed skin. Clear water may be used as eye wash.

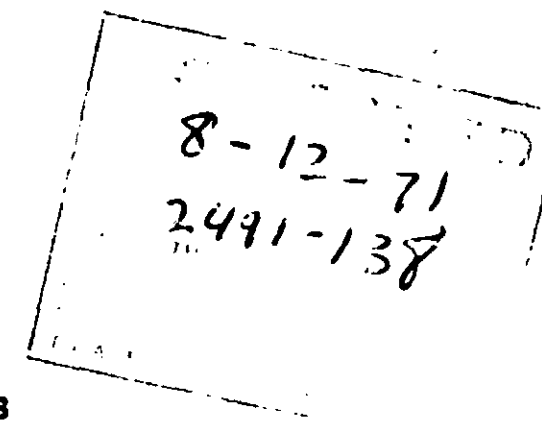

Keep away from feed and food products.

Keep out of the reach of children and domestic animals.

PRE-EMERGENCE

**CAUTION:**

"Keep out of the reach of  
children" (See Other Warnings  
on Back Panel)

U.S.D.A. REG. NO. 2491-139

# **One Application Prevents Growth All Summer**

## **ALSO CONTROLS**

**Carpetweed  
Common Chickweed  
Fall Panicum  
Florida Pussley**

**Green Foxtail  
Johnson Grass  
Lambs Quarters  
Love Grass**

**Purslane  
Texas Millet  
Witchgrass  
Yellow Foxtail**

## **APPLY TO LAWNS IN LATE WINTER OR EARLY SPRING**

Crabgrass Preventer kills crabgrass and the other weeds listed above as they sprout from seed - not after growth has begun.

Apply the contents of this bag uniformly over 2,500 square feet. It is important that there are no skips or misses. Do not rake or disturb soil surface after application. If no rain falls within a week after application, sprinkle lightly.

Fertilize your lawn the same day if you desire. It is not necessary to wait.

## **RESEEDING.**

All crabgrass controls that are really effective will affect the germination of lawn grasses. If it is necessary to reseed large bare spots:

1. Seed early in the spring so young grass can be mowed once before applying Crabgrass Preventer, or

2. Cover bare spots with 1/2 inch of crabgrass free topsoil after applying Crabgrass Preventer, then sow seed.

**CAUTION** Do not apply to newly seeded lawns, or to Dichondra at any time. Some thinning of fescue grasses has been occasionally observed. Avoid contamination of feed or food-stuffs. Do not take internally. Wash after using.
