CRABGRASS KILLER

Treats
2,500 sq. ft.

This product KILLS CRABGRASS - FOXTAIL - BARNYARDGRASS - by effectively killing the sprouting seeds.

CONVENIENT & ECONOMIC -- One springtime application saves time, work and money. This product will not damage bluegrass, ryegrass, fescue, zoysia grass, bermuda grass, St. Augustine grass or centipede grass turfs when applied as directed. Do not apply to bentgrass turfs. Do not apply to completely new lawns started the previous fall.

WHEN TO APPLY: Apply in the spring before crabgrass germinates. Do not sow grass seed for 42 days after application.

HOW TO APPLY: It is important that this product be applied evenly over your lawn without skips or misses. Determine the correct amount for your lawn area. Do not over-apply or under-apply. The contents of this bag should be applied for every 2500 sq. ft. of lawn area (for example, 50 x 50 = 2500 sq. ft.). If your lawn measures 50 x 100 sq. ft. or (5000 sq. ft.), 2 bags are sufficient.

1. Using a spreader setting for the proper one-half rate (see table for spreader settings) spread one half of the required amount for your lawn, moving at a steady rate in one direction.
2. Spread the other half of the required amount over the same area moving across or at right angles to the first application. (This minimizes skips and overlaps, insuring good coverage) When turning or stopping spreader, spreader gate should be closed.

SPREADER SETTINGS

The settings listed below are calculated to apply at one-half rate, as directed above. Check application rate of your spreader before applying. Settings may vary with type, age and condition of spreader.
