EPA Form 8570-6 (Rev. 5-76)

For Selective Preemergence Control of Grass and Broadleaf Weeds in **Established Turf Grasses and Landscape Ornamentals** Overseeding/Reseeding (Cont.)

ACTIVE INGREDIENT Prodiamine [N',N'-DI-n-propyl-2,4-dinitro-6-(trifluoromethyl)-m-phenylenediamine] - 0.574% NERT INGREDIENTS: - 99.426%

Total 100.000% KEEP OUT OF REACH OF CHILDREN CAUTION

See Side Panel for Additional Precautionary Statements Ramicade® is a registered Trademark of Sandoz, Ltd EPA Reg. No. 2491- EPA Est.No.2491-WI -1

PRECAUTIONARY STATEMENTS HAZARDS TO HUMANS and DOMESTIC ANIMALS CAUTION: Causes moderate eye injury (irritation). Harmful ff inhaled or absorbed through the skin. Avoid contact with skin, eyes, or clothing. Avoid breathing dust. Wash thoroughly with soap and water after handling. Prolonged or frequently repeated sidn con-tact while handling the material may cause allergic reactions in some individuals.

Statements of Practical Treatment Eves: Flush thoroughly with water for several ies. Get medical attention If Irritation persists. on Skin: Wash with soap and water. Rinse thoroughly, Get medical attention. If irritation persists. If Inhaled: Remove victim to fresh air.

ENVIRONMENTAL HAZARDS This product has low solubility in water. At the limits of solubility, this product is not toxic to fish. However at concentrations above the level of water solubility, it may be toxic to fish. Do not apply directly to water, to areas where surface water is present or to intertidal areas below the mean high water mark. Drift and runoff from treated areas may be hazardous to aquatic organisms in adjacent sites. Do not contaminate water when

disposing of equipment washwaters
STORAGE AND DISPOSAI

Do not contaminate water, food or feed by storage or disposal. <u>STORAGE</u>: Store in original container away from other fertilizer, feed and foodstuffs, and separated

from other pesticides.

PESTICIDE DISPOSAL: Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

CONTAINER DISPOSAL: Do not reuse empty bag tely empty bag into application equipment. Then se of empty bag in a sanitary landfill or at an increation facility, or if allowed by State or local authorities, by burning, if burned stay out of smoke.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

This product is a turf fertilizer and a selective preemergence herbicide that provides residual control of many grass and broadleaf weeds in turf grasses and landscapes. It controls susceptible weeds by inhibiting weed seeds germination and root development. For most effective weed control it must be incorporated by 1/2 Inch of rainfall, irrigation, or shallow mechanical incorporation. Incorporation should take place as soon as possible after application and should not be delayed past 14 days from the date of application. Do not apply this product through any type of irrigation system. Do not apply serially.
APPLICATION DIRECTIONS

Apply uniformly through suitable, calibrated commercial application equipment.

TURF SPECIES AND RATES (Cont.)

Select maximum use rate based on turf grass species. All applications must be made prior to germination of the target weed seeds. The rates listed in the table below are for weed. control of suproximately 2 - 6 months.
Turf Species and Rates 1

Turf Sp. des	Minimum & Maximum Rate				
i	Lbs./ Acre/ Calendar Year				
Bermudage 38	55 to 260 lbs.				
Centipedec rase	•				
Seashore Paspalum	•				
Tall Fescus					
Zovsia					
Perennial Bluegrass	55 to 175 lbs.				
Perennial Ryegrass	<u> </u>				
Creeping Red Fescue	55 to 130 lbs.				
St. Augustineorass	•				
Creeping Bentgrass mln 1/	2 55 to 115 lbs.				
Bermudagrass; newly	55 to 90 lbs.				
sprigged or plugged(1)					

(1) Suppression only of Foxdail, Goosegrass & Rescuegrass due to reduced product rates. Do not apply more than 130 tos, of product per application. Do not make more than 2 applications per calendar year. Do not apply more than 260 lbs. of product per calendar year, if making two applications, wait at least 60 days after the first application before making second application. Use higher rates of this product to achieve higher levels of fertility and weed control for each turf

WEEDS CONTROLLED

When used at the recommended rates (See Turf Species and Rates Table) this product will control:

Annual Bluegrass Common Chickweed (1) Crabgrass - (Large, Smooth) Foxtail - (Yellow, Green) Goosegrass (2)

Knotweed Oxalis Prostrate Spurge Rescuegrass (3) Shepardspurse (1)

(1) Fall application. (2) For best control of goosegrass apply 130 lbs. / acre. Sixty days later make a second application with 45 to 130 lbs. / acre of product (see information in Turf Species and Rates section above). (3) Suppression Only.

OVERSEEDING/RESEEDING

This product will inhibit germination of turf species if overseeded / reseeded too soon after application. The interval between application and overseeding/reseeding is dependent on the application rate, soil temperature, and the soil moisture.(cont. on next panel)

NOTICE: Buyer and user assume all risk and liability of use, storage and/or handling of this product not in accordance with the terms of this label.

ESTABLISHED TURF This product is a selective preemergence herbicide that, when properly applied, will control certain grass and broadleaf weeds in established grass turf. The species of turf grass determines the maximum amount of material that may be applied during a year. Most effective weed control in turf grasses will be obtained when this product is activated by at least 1/2 inch of rainfall or irrigation within 14 days after application and prior to weed germination. See the map below for approximate crabgrass germination dates.

CRABGRASS SEED GERMINATION DATES

A shorter interval is possible if growing conditions are warm and wet, while a longer interval is needed or the conditions are cool and dry. Use the following Overseeding/Reseeding Intervals Table as a guirle when choosing the appropriate overseeding/reseeding interval for each situation. The table below lists the Overseeding/Reseeding Intervals (Months)
Based Upon Seeding Method and Predominant Soil
Conditions for the Seeson.

Overseeding/Reseeding Intervals Table

	Broadcast Seeding		Drill Seeding		
lbs:/Acre of product	wet &		wet & warm		
55 to 90 91 to 175 176 to 260	4 mos. 8 mos. 12 mos.	6 mos. 12 mos. 18 mos.	6 mos.	8 mos.	

ANDSCAPE ORNAMENTALS

This product will not harm most established ornemental trees, shrubs and flowers when applied to surrounding areas in accordance to the directions given in the Turf Species and Rates section. The following species have shown tolerance to this product.

This product is a selective preemergence herbicide that, when properly applied, will control certain grass and broadleaf weeds in established grass turf. The species of turf grass determines the maximum amount of material that may be applied during a year. Most effective weed control in turf grasses will be obtained when this product is activated by at least 1/2 inch of rainfall or irrigation within 14 days after application and prior to weed germination. See the map below for approximate crabgrass germination dates.

Approximate Date

1 After May 30 MIR 2 After May 10

宝書 3 After April 20

MIII 4 After March 20 5 Jan 1 to Mar 20

Foxtail (yellow green) tend to germinate before craborass, therefore, if targeting foxfails, apply 3 weeks before the corresponding crabgrass germination date.

Use Precautions

The following use precautions apply to the use of this product in turf grasses. Application of this product may thin emerged annual bluegracs and newly overseeded grasses. Do not apply to FALL SEEDED TURF until the following spring and only after the scoond mowing. Do not apply to SPRING SEEDED TURF or to newly set sod until the following year. Application to twf stressed by drought, low fertility, or pest damage may result in turf injury. Do not apply this product to tees or greens, or to areas where dichondra, colonial bentgrass, velvet bentgrass or annual bluegrass (Pos annua) are desirable species.

Maximum Annual Rates

This product should not be applied above a maximum annual rate of 260 lbs, per acre or 5.9 # /1,000 sq.ft. TURF SPECIES AND RATES

For season long control this product may be applied as a single application, or if needed followed by a second application for increased length of control. The length of time of residual weed control provided by this product is related to the rate applied. Use the higher rate within the listed range for longer control. Longer control is desirable in areas where crabgrass germinates between January 1 and April 20, (See Crabgrass Seed Germination Data, Map.)...
