Rotenone and other cube extractives	
Pyrethrins I and II	
Inert Ingredients	3%
Ethylene Glycol Ether of Pinene	
Dibutyl Oxalate	

USDA Reg. No. 2527-17

### DIRECTIONS

**FOR KILLING MOTHS, CARPET BEETLES, BUFFALO BUGS, THEIR LARVAE AND EGGS:** Use a good sprayer that will produce a fine floating mist. Thoroughly spray rooms, closets and other storage spaces and any articles therein that are subject to moth damage.

**TO PROTECT CLOTHING OR OTHER FABRICS IN STORAGE:** For goods like blankets, overcoats, sweaters, etc., that are to be stored in tight chests, boxes or other tight containers, spray both sides of the fabrics thoroughly, making sure to drive the spray into the folds and crevices of the fabrics and to reach all parts of the material being treated. Spray thoroughly the storage space in which the articles are to be placed. Treatment according to these directions will kill all stages of moths, carpet beetles and other injurious insects that may be present on the fabric or in the storage space and articles so treated and so stored will remain free of moth injury.

**TO PROTECT GOODS NOT IN STORAGE:** For rugs, clothing and other fabrics that are to be exposed to the air or worn, spray thoroughly both sides of the fabrics with Dead-Lite Moth Spray. Repeat applications once a month. For overstuffed furniture and upholstered articles, etc., inject (preferably with a large glass syringe) at least 4 ounces through the upholstery at various points, so as to thoroughly impregnate the upholstery. For large pieces, such as davenports and large chairs, larger doses of the moth spray are required. The material should be injected about every 4 to 6 inches over the surface of the upholstery. This treatment, coupled with monthly spraying of the exposed surfaces of the furniture will give protection over a period of several months.

**CAUTION: KEEP OUT OF REACH OF CHILDREN.** Harmful if swallowed or absorbed through skin. Avoid prolonged or repeated contact with skin. Do not spray into or near fire or open flame. Avoid contamination of food. Ventilate treated rooms. Air dry treated furniture before using. Do not use on household pets. Dead-Lite contains petroleum naphthas and should be used with care on certain types of composition flooring such as rubber, asphalt tile, etc.
