DIRECTIONS

IT IS A VIOLATION OF FEDERAL LAW TO USE THIS PRODUCT IN A MANNER INCONSISTENT WITH ITS LABELING

MAX KILL CONTACTICIDE 1 is a contact **READY-TO-USE** insecticide designed for use in flour mills, feed mills, feed and food processing plants, cereal grain processing plants, grain elevators, granaries, shipholds, barges, empty railcars, grain trucks, warehouses, feed and seed stores, grocery stores, restaurants, and hotels.

WHEN USED AS A SPRAY in mills, cereal grain processing plants, grain handling facilities (granaries, elevators) for the control of accessible stages of granary weevil, rice weevil, cadelle, confused flour beetle, saw toothed grain beetle, lesser grain borer and other listed crawling insects, spray floors, walls and other surfaces of bins, storage and handling areas thoroughly with particular attention to cracks, crevices and other protected locations. Waste grain, dust, dirt and debris should be removed and destroyed and storage areas thoroughly cleaned before spraying. Treat unloading, handling and processing areas as well as EMPTY conveying, processing and handling equipment, for example the inside of feeders, filters, purifiers, conveyors, elevators, housings and hoppers, pick up conveyors, etc. Spray thoroughly around the base of heavy machinery and equipment. Let sprayed surface thoroughly dry before using. One gallon will cover 750 square feet of non absorbent surface.

AS A PROTECTANT in empty boxcars, grain trucks, barges and ships, for the control of accessible stages of the granary weevil, rice weevil, cadelle, confused flour beetle, saw toothed grain beetle, lesser grain borer and other listed crawling insects, spray the floors, walls, beams, hatches, doorways and other protected harbourage points until surfaces are wet. A hand type sprayer may be used utilizing low pressure. Allow to completely dry before loading. One gallon will cover 750 square feet of treated surface.

WHEN USED AS A SPRAY in food plants, grocery stores, food and feed warehouses and restaurants, for the control of accessible stages of flour beetles, saw toothed grain beetles, lesser grain borer, confused flour beetle, crickets and listed crawling grain insects, use a sprayer which can operate at a low pressure and which will provide a coarse, non misting spray pattern. Avoid contamination of food, utensils as well as utensils or other food contact areas. Spray the floors, baseboards, cracks, crevices and other areas where insects are active. Spray other premises on a separate basis. Apply spray until areas are wet but not to the point of runoff. One gallon will cover 750 square feet of treated surface.

WHEN USED AS A FOG for control of meal moth, angoumois grain moth, flour moth, grain moths, beetles and accessible stages of listed insects in food processing plants, elevators and empty granaries or grain bins, use a thermal or air operated fogging apparatus and **MAX KILL CONTACTICIDE 1** at the rate of one quart per 5,000 cubic feet. Close all doors and windows as before application and leave closed for 30 minutes after the dosage has been applied to allow for settling.

WHEN USED AS A FOG in empty box cars, van type grain trucks, barges and ships, for the control of accessible stages of the granary weevil, rice weevil, cadelle, confused flour beetle, saw toothed grain beetle, lesser grain borer and other listed flying insects, use a mechanical or air operated fogging apparatus and **MAX KILL CONTACTICIDE 1** at the rate of one quart per 1,000 cubic feet. Close all doors and hatches before applying and leave closed for 30 minutes after total dosage has been applied to allow for settling.

WHEN USED AS A FOG in the beds of van type trucks containing baggage, for control of the following flying insects and accessible stages of listed crawling grain insects, cover the bags with either paper or plastic sheets and apply at the rate of 8 ounces per 1,000 cubic feet of unoccupied space. Close all doors before applying and leave closed for 30 minutes after total dosage has been applied.
