Directions For Use

MAX KILL MILL & BIN SPRAY is a ready to use combination long lasting insecticide that is best applied through conventional tank type pressure sprayers.

AS A CLEAN UP SPRAY in warehouses, mills and elevators apply as a coarse, wet spray to surfaces and areas where insects are known to be harboring. Avoid the contamination of equipment. After application allow for complete drying in areas where bagged feed or food stuffs might be stored. It may be used as a clean up spray in bin bottoms after they have been thoroughly cleaned and before any grain is put back into the bin. One gallon should cover approximately 750 square feet.

AS A PROTECTANT in empty box cars, trucks and shipholds apply as a coarse wetting spray to all exposed surfaces. Allow for complete drying before any commodity loading.

AS A BIN SPRAY before grain is thoroughly clean and remove all dust and debris before applying a coarse, wetting spray to all exposed surfaces. Here again complete drying is necessary before any commodities are placed into the bin. Do not spray directly on grain and do not contaminate any feed or food stuffs. One gallon should cover approximately 750 square feet on non-absorbent surfaces.

AS A FOG in elevator galleries and tunnels apply through a mechanical type fogger or mister at the rate of one quart per 1,000 cubic feet. Do not apply while equipment is in operation and allow for complete wetting of the fog or mist before any commodities are placed into the bin. This method is not satisfactory for the control of the adult stages of insects. Repeat as needed.
