

## GAS DETECTION EQUIPMENT

Phosphine is a poisonous gas and is to be treated accordingly. From time to time it will be necessary to check the atmosphere for the presence of phosphine. This is particularly true of buildings and/or warehouses following a fumigation. There are many commercially available sampling devices. All users of Detia Gas Ex-B should have testing equipment available.

## ABOUT DANGER SIGNS

Research Products Company furnishes signs that are considered appropriate. Refer to the illustration below.

Fumigated areas must be placarded on all entrances with signs containing at least the signal word **DANGER** and the "Skull & Crossbones" and the words "Area under fumigation, do not enter until completely aerated," the date of fumigation, name of the fumigant used, emergency telephone number for contact, and the name and address of the fumigator. Do not remove warning signs until the fumigated area is completely aerated and safe for entry, as indicated by a suitable detector.

Area under fumigation, do not enter until completely aerated.
