...the most effective way to control the pest is to use a bait station. The bait station is a small box that contains a bait that is attractive to the pest. The pest enters the bait station and eats the bait, which kills it. The bait station is placed in a location where the pest is likely to enter. The bait station is checked regularly to ensure that the bait is still present and that the pest is still entering the bait station. If the bait is gone, the bait station should be replaced. If the pest is still entering the bait station, the bait station should be replaced with a new one. The bait station is a very effective way to control the pest and is a good choice for homeowners who want to control the pest without using pesticides.
