3804 BALTOCOP PENTA-CLEAR (Pentachlorophenol Type)  
WOOD PRESERVATIVES  
(USDA Reg. No. 2568-4)

All wood to be treated should be dry, and in any case where wood has been previously painted or varnished the existing coating must be removed. Coverage 400 to 600 square feet per gallon depending on the roughness and porosity of the wood. 72 hours drying time should be allowed before applying paint or varnish. Baltocop Green may show a slight bleed in the first coat of paint applied over it, but the second coat will show no discoloration. Use Baltocop Pentaclear on the surfaces to be varnished.

Wood to be dip treated should be immersed for at least 3 minutes; if sprayed or brushed, two flowing coats should be applied for effective control of wood rot. Baltocop Green and Baltocop Pentaclear contain poison which destroys the larvae of wood eating insects in addition to protecting against wood destroying bacteria and fungi. Do not add thinner or drier because any alteration of the formula will cause loss of effectiveness. Surface treatment of buildings is of little protection against termites as pressure application is required.

**CAUTION: CONTAINS PETROLEUM DISTILLATE. If swallowed, do not induce vomiting. CALL PHYSICIAN IMMEDIATELY.**  
**COMBUSTIBLE. Keep away from heat and open flame. Use with adequate ventilation. Avoid prolonged contact with skin and breathing of vapor or spray mist. Do not transfer contents to bottles or other unlabeled containers. Close container after each use.**

**KEEP OUT OF THE REACH OF CHILDREN.**
