## WOOD PRESERVATIVE

Penetrating - Water-Repellent

*Dutch Boy*  
**Pe**

**OUTSTANDING QUALITIES:**  
Preservative is a clear, penetrating preservative that provides effective and economical protection against the ravages of termite, wood-boring insects, and destructive fungi. In addition to its toxic properties, it is a highly effective water repellent and will reduce deterioration caused by changes in moisture content. It will also cause intermittent swelling and shrinkage of wood, thereby forming a tight, protective film that prevents further moisture absorption and decreases its effect.

**ACTIVE INGREDIENTS (5.05%)**  
Pentachlorophenol . . . 4.32%  
Other Chlorophenols . . . 0.03%  
**INERT INGREDIENTS (94.95%)**  
Methyl Cellulose . . . 1.87%  
Acrylic Copolymer . . . 1.13%  
Fungicide . . . 0.05%  
Preservative . . . 0.03%  
Water . . . 89.95%

**WHERE TO USE:** On exterior and interior woodwork, including trim, doors, windows, and siding. Use on all wood surfaces, including decks, porches, and fences. Apply liberally to all surfaces, including joints and corners. For best results, apply to clean, dry wood. Do not use on painted or stained wood. Do not use on metal or masonry.

**WARNING:** Keep out of reach of children. Do not use in or near buildings.

## WOOD PRESERVATIVE

### -Water-Repellent

## Dutch Boy WOOD PRESERVATIVE

### Penetrating - Water-Repellent

**OUTSTANDING QUALITIES:** "Dutch Boy" Wood Preservative is a clear, penetrating solution that provides effective and economical protection against the ravages of termites and other wood-boring insects, and destruction by wood-rotting fungi. In addition to its toxic wood preservative properties, it is a highly effective water-repellent and will reduce deterioration of wood structures caused by changes in moisture content which cause intermittent swelling and shrinking. It dries rapidly to a pale, odorless film that can be painted over without decreasing its effectiveness.

**WHERE TO USE:** On unpainted wood structures where protection is required against insect and fungus attacks or decay. Recommended for use on any structure where it is difficult to reach the wood for maintenance. Use on structures in contact with soil, plate and sub-bearing locations or near the ground level. It is especially recommended for the pre-treatment of sub-soil portions of fence posts, pilings, etc. Although the toxicity is reduced, it may also be used in lieu of mineral spirits in the

preparation of stains from such "Dutch Boy" products as House Paint, Exterior Flat Finish and Utility Paste.

**ESTIMATING AMOUNT REQUIRED:** Allow one gallon for each 100 square feet depending upon the porosity of the surface and the method of application.

**APPLICATION:** May be applied by brushing, rolling, spraying or dipping. Thinning is unnecessary and not recommended. Dipping is the preferred method of application. The wood should be immersed until it has absorbed about eight percent preservative per cubic foot of volume. Allow to dry at least 48 hours before painting. If application is made by brush, rolling or spraying, the wood should be pre-treated with a heavy coat of preservative. Allow to dry at least 48 hours before painting. The final coat should dry at least 48 hours before the surface is painted. Since Wood Preservative is toxic to pets and humans, observe the precautions noted below when storing or handling.

**WARNING: HARMFUL IF SWALLOWED OR ABSORBED THROUGH SKIN. COMBUSTIBLE LIQUID. Avoid contact with eyes, nose, mouth, and skin. If contact occurs, flush with water. If swallowed, do not induce vomiting. If inhaled, get fresh air. Keep out of reach of children and pets. Do not use in enclosed areas. Do not use in areas where food is prepared or stored. Do not use in areas where food is consumed. Do not use in areas where food is stored. Do not use in areas where food is stored.**
