Directions for use

REDI-MIST is a premium ready-to-use spray. It is manufactured to produce the best possible results when used as directed. When spraying or fogging in restaurants, food processing plants, bottling plants, or other areas where foodstuffs are present, care should be taken to remove or protect foods and food handling equipment to prevent contamination. Clean exposed surfaces which come in contact with foods following treatment. Do not use as a space or fogging spray when food processing plants are in operation. Do not remain in treated areas and ventilate the area after treatment is completed.

As a Space Spray: To clear enclosed areas of flies, mosquitoes, gnats, and flying moths, spray toward the ceiling and corners until the area is filled with a light mist. For best results close all windows and doors during spraying and keep them closed for 10 to 15 minutes after spraying.

For Mist Fogging: To clear enclosed areas of flies, mosquitoes, gnats, and flying moths, use approximately one ounce of **REDI-MIST** for each 1000 cu. ft. of space. Keep doors and windows closed for 10 minutes. Sweep up and destroy all dead insects. Follow recommendations of manufacturer for proper use of fogging machines. Approved for use in houses, restaurants, institutions, food processing plants, bottling plants, warehouses, and theaters.

To Kill Roaches, Silverfish, Ants: Spray liberally into breeding and hiding places such as cracks around baseboards, cabinets, walls, and woodwork. Thoroughly treat trails, runs, and other places where nests are seen. Spray directly on insects when possible. Repeat as necessary.

To Kill Fleas: Spray animal sleeping quarters freely. Spray floors and floor coverings. Force spray into cracks in floor and about the room. Spray bedding of household pets. Repeat as necessary.

To Kill Carpet Beetles: Spray top and bottom surfaces of carpets and rugs, in cracks in the floor and around baseboards. Repeat every 30 days to insure proper protection.

As an Animal Spray: To protect cattle against horn flies, house flies, stable flies, face flies, mosquitoes and gnats, apply just enough spray to wet the ends of the hair, but not enough to soak the skin. One or two ounces is enough to treat an adult cow. Apply once daily preferably in the morning. Repeat daily or as necessary.

For Face Flies: Use heavy cloth or sponge to wipe **REDI-MIST** on the face of cattle at rate of 1.0 fl. ounce per animal, paying particular attention to the area around the eyes and nostrils. Treat daily while cattle are stanchioned for morning milking.

Caution: Harmful if swallowed. Avoid contamination of feed and foodstuffs. Keep out of reach of children. Do not store near heat or open flame.

Seller makes no warranty, expressed or implied, concerning the use of this product other than indicated on label. Buyer assumes all risk of use and handling of this material when such use and handling is contrary to label instructions.
