DIRECTIONS

### DIRECTIONS FOR USE

#### CATTLE and HORSES

To control Horn Flies, Cattle Lice, Ear Tick, Lone Star Tick, Gulf Coast Tick, Winter Tick, and Cattle Fever Tick, mix one gallon of DELNAV EXTRA with 200 gallons of water and stir well to form a cream emulsion. Spray animals with a strong spray to penetrate to the skin. Wet all portions of the skin thoroughly. Approximately two quarts of spray are required for a full grown cow, and proportionately less for smaller animals. Be sure not to overdose young animals. For tick control, repeat as necessary. One spraying with DELNAV EXTRA will control Hornflies up to three weeks and a single application will control Lice. DO NOT repeat treatment more often than every two weeks.

#### BACKRUBBERS

As an aid in the control of Hornflies and Lice on beef cattle, dilute 1 gallon of DELNAV EXTRA with 19 gallons of fuel oil or other suitable carrier and charge backrubber device or soak sack or cloth as occasion requires. Retreat backrubber as needed. Do not spray animals with this oil solution. Do not "pour on" oil solution.

### "POUR ON" TREATMENT

For control of Hornflies on beef cattle, dilute 1 gallon of DELNAV EXTRA with 49 gallons of water, and apply by pouring 1 quart of dilute emulsion along the back line of the animal. The addition of 2 ounces of SLICK Spreader-Sticker per 40 gallons of emulsion will aid in thorough wetting of animal's back. Do not retreat more often than every 30 days.

#### HOGS

To control Hog Lice, mix one gallon DELNAV EXTRA with 200 gallons of water; mix well, and spray with a strong spray to thoroughly wet the skin. Do not repeat treatment more often than every 2 weeks.

#### SHEEP and GOATS

To control Sheep Ticks (Keds), Sheep Lice, Goat Lice and Wool Maggots, use one gallon of DELNAV EXTRA with 200 gallons of water, mix well, and spray animals thoroughly. Always stir dipping vat well just before using. Do not repeat treatment more often than every two weeks.

#### AS A DIP

For Cattle, Horses, Sheep and Goats: Mix one gallon of DELNAV EXTRA with 200 gallons of water. Stir well to form a creamy emulsion. Water animals well before dipping to prevent drinking of dip solution. Under quarantine dipping regulations, all animals must be dipped. Hand dipping of young animals will prevent swallowing of dip solution. Do not retreat more often than every two weeks.
