DIRECTIONS FOR USE ON BEEF CATTLE ONLY

STARBAR BEEF CATTLE DUST is effective for control of horn flies on cattle.

SELF-TREATMENT: Suspend dust bags near salt boxes, loafing sheds or near feed and water facilities. The bags should hang level at a height so that the lower portions hit the head, shoulders and back-line of the cattle being treated. Place a board baffle behind the bags if used near feed or water to prevent contamination. For mandatory use, suspend bags across a gate between pasture and water or between pasture and feeding areas.

CAUTION: Harmful if swallowed or absorbed through the skin. Do not breathe the dust. Do not get in eyes or on skin. Wear rubber gloves and fresh clothing. Wash with soap and water immediately after use or contact. Wash all contaminated clothing with soap and hot water before re-use.

ANTIDOTE: Atropine is antidotal. 2-PAM is also antidotal when administered early, and in conjunction with atropine.

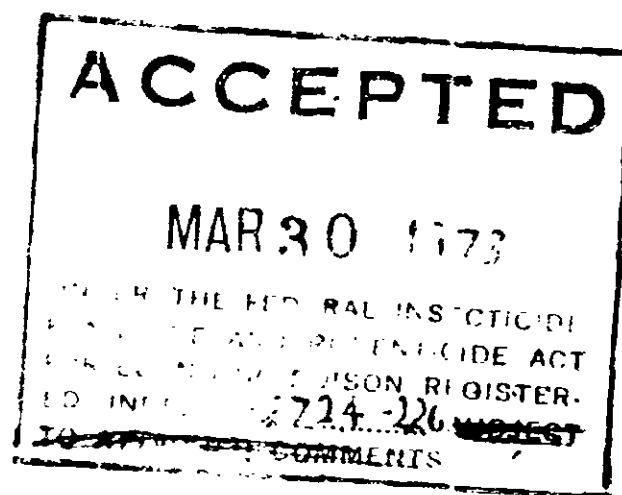

Bury waste and empty container in a safe place away from water supplies.

This product is toxic to fish and wildlife. Do not contaminate water by cleaning of equipment or disposal of wastes. For use in dust bag (self-treatment) installation only. Do not permit access to bags within 21 days of slaughter. Do not treat dairy cattle. Do not treat sick or debilitated animals. Do not contaminate food or feed.

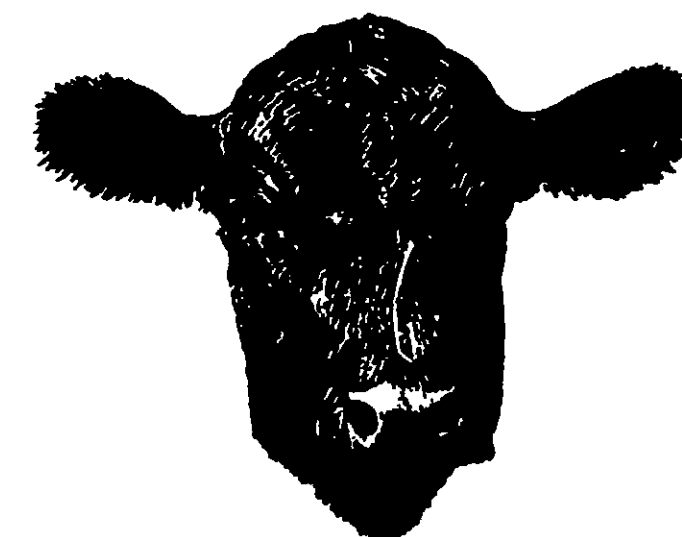

Seller makes no warranty, expressed or implied concerning the use of this product other than indicated on the label. Buyer assumes all risk of use and handling of this material when such use and handling is contrary to label instructions.
