3. We have reviewed the data supporting the biological activity of the (s)-methoprene and have the following comments: The test results to date indicate that (s)-methoprene was comparable to racemic methoprene through 161 days for flea control. The lack of emergence at 123 days was due to low survivability of fleas at that time of year.

The full report for the test should be submitted when testing is completed.

4. Submit five (5) copies of your final printed labeling before you release the product for shipment. Refer to the A-79 Enclosure for a further description of final printed labeling.

If these conditions are not complied with, the registration will be subject to cancellation in accordance with FIFRA section 6(e). Your release for shipment of the product constitutes acceptance of these conditions.

A stamped copy of the label is enclosed for your records.
