SANDOZ 9023 FLY BAIT STATION

Kills flies [dead] within seconds
Attracts flies within 300 ft² area
Single application kills flies up to 8 weeks [56 days]
Attracts and kills male and female nuisance flies from all directions
Advanced patented triple action attractant
Self-Contained Attractant
Easy to use
Compatible with IPM programs
No bioaccumulation in the environment

ACTIVE INGREDIENT:

Nithiazine [2H-1, 3-thiazine, tetrahydro-2-(nitromethylene)] 1%

OTHER INGREDIENTS: 99%

Total 100%

KEEP OUT OF REACH OF CHILDREN

CAUTION

See Back Panel for Additional Precautions

NET CONTENTS: X stations [bait strips]

EPA Reg No. 2724-461

EPA Est. No.

PRECAUCION AL USUARIO:

Si usted no lee ingles, no use este producto hasta que la etiqueta haya sido explicada ampliamente.

The Sandoz 9023 fly bait station contains a unique active ingredient that controls nuisance flies through ingestion. The active ingredient is contained in a sugar-based matrix that flies find irresistible. Flies will land on the station and begin exploring the surface. Once the flies locate the sugar, they will begin feeding. Shortly after feeding, the flies will begin to die.

The Sandoz 9023 fly bait station may be placed at locations where flies are a problem. For optimum results, place the station low to the ground, flies generally forage for food close to the ground. Flies seen at higher locations are resting and not actively seeking food. Bait stations placed in rafters or areas higher than 4 feet will not be as effective. Place the bait station on a stationary object. Do not allow the bait station to blow in the wind, as flies will not land on moving objects. Affix the station using suitable adhesive that will keep the station in place for the duration of the product's life. The station may be placed at any angle but is most effective when placed on a flat surface. In areas of low to moderate infestations, the station will provide control, but control may be less apparent. The fly bait station contains a triple action fly attractant that, when activated, will attract flies to the area.

The Sandoz 9023 fly bait station should be protected from moisture and direct sunlight, when possible. Excessive moisture will reduce the residual life of the Sandoz 9023 fly bait station. Sandoz 9023 fly bait station can be attached to dumpsters, refuse bins, garbage chutes, poles, feed bunks, walls, fences, and other surfaces out of the reach of children and animals. The Sandoz 9023 fly bait station is most effective against house flies (*Musca domestica*) and the lesser house fly (*Fannia culicularis*). The active ingredient is contained in a sugar-based matrix that is the yellow portion of the fly bait station.

The Sandoz 9023 fly bait station can be used in a variety of areas. Examples of placement locations are: garbage chutes, dumpsters, loading docks, waste containers, grease pits, rest areas, outdoor rest room facilities, in and around stables, dairy barns, milking parlors, loafing sheds, kennels, poultry houses, aviaries, swine houses, feedlots, refuse and recycling facilities, around commercial food-handling facilities, restaurants, bars, groceries, stores, and other facilities where house flies are a nuisance.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS - CAUTION: Avoid contact with eyes.

FIRST AID	
If in eyes	<ul style="list-style-type: none"> • Hold eye open and rinse slowly and gently with water for 15-20 minutes. • Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. • Call a poison control center or doctor for treatment advice.
Have the product container or label with you when calling a poison control center or doctor, or going for treatment. You may also contact 1-800-[phone number] for emergency medical treatment information.	

DIRECTIONS FOR USE: It is a violation of Federal Law to use this product in a manner inconsistent with the labeling.

In enclosed structures or sites with low to moderate house fly populations, use 1 station [strip] per 300 ft². In open structures or sites with high house fly populations, use 1 station [strip] per 100-150 ft². Ventilation will not diminish Sandoz 9023 fly bait station's effectiveness since it works by fly feeding action.

Remove the Sandoz 9023 fly bait station [strip] from the protective pouch. Handle by grasping corner tabs.

The product contains 1 attractant container on the fly bait station. Crush the attractant container at time of application. Note: This attractant has a strong odor

For best results, hang or affix device close to fly forage areas out of reach of children and animals. Place fly bait station close to the ground in areas that are inaccessible to children and animals. Avoid placement of strip in locations higher than 4 feet above the ground.

Do not place where daily activity will get stations [strips] wet.

Replace when effectiveness diminishes

STORAGE AND DISPOSAL: Store in a cool dry place away from children and animals. To dispose, wrap in newspaper and put in trash.

Seller makes no warranty, expressed or implied, concerning the use of this product other than indicated on the label. Buyer assumes all risks of use and handling of this material when such use and handling are contrary to label instructions.
