

GENERAL INFORMATION

VEGABATE I is very effective for killing most woody plants, weeds and grasses on non-crop areas such as rights-of-way, road sides, drainage ditches, storage yards. Application may be made as a full coverage spray to foliage and stems when properly diluted with water. VEGABATE I may also be very effectively applied as a water-in-oil emulsion when used with the proper spray adjuvant.

WARNING

Do not reuse empty container. Wash thoroughly with water and detergent. Discard in a safe place.

Do not contaminate waters used for domestic consumption or by animals, wildlife and aquatic life, or water used for irrigation purposes. Keep livestock off treated areas.

Do not apply this product in such a manner that it will come in contact with desirable crops or ornamentals, and do not drain or flush spray equipment over such plants.

Do not contaminate or store near feed or foodstuffs.

Wash spray equipment thoroughly after use of this product to minimize carry-over during actual use. Whenever practical, use spray tanks with corrosion-resistant linings. If spray equipment is clean for weekend or longer periods, coat inside and outside surfaces with a light oil film.

CAUTION

KEEP OUT OF REACH OF CHILDREN

This product is harmful if taken internally. If swallowed, induce vomiting and call physician at once. Avoid contact with skin, eyes, or clothing. In case of contact, wash off with plenty of water.

DIRECTIONS

VEGABATE I may be applied in water solution, or as a water-in-oil (invert) emulsion. The latter method is recommended for superior sticking, spreading and penetrating characteristics.

Water-in-Oil Emulsions: Mix 5 gallons of VEGABATE I with 95 gallons of water and place in the main sprayer compartment of a bifluid sprayer. Mix 1 gallon of Stull BIVERT-AMX with 14 gallons of No. 2 Diesel Fuel and place in the oil phase compartment of the bifluid sprayer. The water (VEGABATE I), water and oil (BIVERT-AMX/diesel) phase of the water-in-oil emulsion are proportioned and mixed in the bifluid sprayer at a ratio of 6 parts water phase to 1 part oil phase.

Spraying with this emulsion may be done during any season of the year. Woody plants should be treated to give as thorough a coverage as possible on all bark covered surfaces. Weeds and grasses should be foliage treated to obtain complete coverage of all exposed surfaces. Repeat if necessary.

Water Solutions: Mix 5 gallons of VEGABATE I with 95 gallons of water, and add one quart of a liquid laundry detergent or agricultural surfactant. This solution may be applied to woody plants at any time after they have reached the full leaf stage until the foliage begins to discolor at the end of the normal growing season. Complete coverage of all foliage, limbs and trunks to the point of runoff is necessary. Weeds and grasses should be foliage treated to the point of runoff on all exposed surfaces. Repeat if necessary.
