

U.S. ENVIRONMENTAL PROTECTION AGENCY
 Office of Pesticide Programs
 Registration Division (7505P)
 1200 Pennsylvania Ave., N.W.
 Washington, D.C. 20460

EPA Reg. Number:

2749-611

Date of Issuance:

2/28/22

NOTICE OF PESTICIDE:

Registration
 Reregistration
 (under FIFRA, as amended)

Term of Issuance:

Unconditional

Name of Pesticide Product:

AG35620-b R334.2 70 WDG Herbicide

Name and Address of Registrant (include ZIP Code):

Aceto Life Sciences, LLC
 4 Tri Harbor Court
 Port Washington, NY 11052

Note: Changes in labeling differing in substance from that accepted in connection with this registration must be submitted to and accepted by the Registration Division prior to use of the label in commerce. In any correspondence on this product always refer to the above EPA registration number.

On the basis of information furnished by the registrant, the above named pesticide is hereby registered under the Federal Insecticide, Fungicide and Rodenticide Act.

Registration is in no way to be construed as an endorsement or recommendation of this product by the Agency. In order to protect health and the environment, the Administrator, on his motion, may at any time suspend or cancel the registration of a pesticide in accordance with the Act. The acceptance of any name in connection with the registration of a product under this Act is not to be construed as giving the registrant a right to exclusive use of the name or to its use if it has been covered by others.

This product is unconditionally registered in accordance with FIFRA section 3(c)(5) provided that you:

1. Submit and/or cite all data required for registration/reregistration/registration review of your product when the Agency requires all registrants of similar products to submit such data.

Signature of Approving Official:

Heather E. McFarley

Product Manager 24
 Fungicide and Herbicide Branch, Registration Division (7505P)
 Office of Pesticide Programs

Date:

2/28/22

2. Make the following label changes before you release the product for shipment:
 - Revise the EPA Registration Number to read, “EPA Reg. No. 2749-611.”
3. Submit one copy of the revised final printed label for the record before you release the product for shipment.

Should you wish to add/retain a reference to the company’s website on your label, then please be aware that the website becomes labeling under the Federal Insecticide Fungicide and Rodenticide Act and is subject to review by the Agency. If the website is false or misleading, the product would be misbranded and unlawful to sell or distribute under FIFRA section 12(a)(1)(E). 40 CFR 156.10(a)(5) list examples of statements EPA may consider false or misleading. In addition, regardless of whether a website is referenced on your product’s label, claims made on the website may not substantially differ from those claims approved through the registration process. Therefore, should the Agency find or if it is brought to our attention that a website contains false or misleading statements or claims substantially differing from the EPA approved registration, the website will be referred to the EPA’s Office of Enforcement and Compliance.

If these conditions are not complied with, the registration will be subject to cancellation in accordance with FIFRA section 6. Your release for shipment of the product constitutes acceptance of these conditions. A stamped copy of the label is enclosed for your records. Please also note that the record for this product currently contains the following CSFs:

- Basic CSF dated 2/15/2021
- Alternate CSF dated 2/15/2021

If you have any questions, please contact Sayed Islam by phone at 202-566-2796, or via email at islam.sayed@epa.gov

Enclosure:

- Stamped label

ACCEPTED

02/28/2022

Under the Federal Insecticide, Fungicide and Rodenticide Act as amended, for the pesticide registered under EPA Reg. No. 2749-611

[Agricultural Sub-label]

{BOOKLET FRONT PANEL LANGUAGE}

FLUCARBAZONE-SODIUM GROUP 2 HERBICIDE

AG35620-b R334.2 70 WDG HERBICIDE

[For burndown and early season residual control and postemergence control of wild oat, green foxtail and other listed grass and broadleaf weeds in Spring and Winter wheat.]

[For selective control of listed weeds in turf on golf courses, sod farms, residential and commercial turf sites, park and recreation areas, school grounds and other turf areas, in conifer nurseries and field plantings and for seed head and growth management in turf.]

ACTIVE INGREDIENT:	% BY WT.
Flucarbazone-sodium.....	70%
OTHER INGREDIENTS:.....	<u>30%</u>
TOTAL	100%

See inside booklet for First Aid, Precautionary Statements and Directions for Use.

Read "LIMIT OF WARRANTY AND LIABILITY" before buying or using. If terms are not acceptable, return at once unopened.

KEEP OUT OF REACH OF CHILDREN CAUTION

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle.
(If you do not understand the label, find someone to explain it to you in detail)

EPA Reg. No. 2749-XXX
EPA Est. No.

Net Contents: 10, 20 ounces
55 lb. (25kg)

Manufactured for:
Aceto Life Sciences, LLC
4 Tri Harbor Court
Port Washington, NY 11050

{LANGUAGE INSIDE BOOKLET}

First Aid	
IF IN EYES	<ul style="list-style-type: none"> • Hold eye open and rinse slowly and gently with water for 15-20 minutes. • Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eyes. • Call a poison control center or doctor for treatment advice.
IF ON SKIN OR CLOTHING	<ul style="list-style-type: none"> • Take off contaminated clothing. • Rinse skin immediately with plenty of water for 15 to 20 minutes. • Call a poison control center or doctor for treatment advice.
Note to Physician: No specific antidote is available. Treat the patient symptomatically. Have the product container or label with you when calling a poison control center or physician, or going for treatment.	

FOR MEDICAL EMERGENCIES INVOLVING THIS PRODUCT, CALL CHEMTREC® TOLL FREE 1-800-424-9300 or 1-703-527-3887 (24 Hours per Day, 7 Days per Week).

FOR CHEMICAL SPILL, LEAK, FIRE, EXPOSURE OR MEDICAL EMERGENCY INVOLVING THIS PRODUCT CALL CHEMTREC® TOLL FREE 1-800-424-9300 or 1-703-527-3887 (24 Hours per Day, 7 Days per Week).

PRECAUTIONARY STATEMENTS

Hazards to Humans and Domestic Animals

CAUTION: Cause moderate eye irritations. Harmful if absorbed through skin. Avoid contact with skin, eyes or clothing. Wear appropriate eyewear. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet. Remove and wash contaminated clothing before reuse.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Applicators and other handlers must wear:

- Long-sleeved shirt and long pants,
- Chemical-resistant gloves made of water-proof material,
- Shoes plus socks,

USER SAFETY REQUIREMENTS:

Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

ENGINEERING CONTROL STATEMENTS:

When handlers use closed systems, or enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240 (d) (4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

USER SAFETY RECOMMENDATIONS:

Users should:

- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.
- Remove clothing /PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.

ENVIRONMENTAL HAZARDS

DO NOT apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. **DO NOT** apply when weather conditions favor drift from areas treated. **DO NOT** contaminate water when disposing of equipment washwaters or rinsate.

NON-TARGET ORGANISM ADVISORY:

This product is toxic to plants and may adversely impact the forage and habitat of non-target organisms, including pollinators, in areas adjacent to the treated area. Protect the forage and habitat of non-target organisms by following label directions intended to minimizing spray drift.

GROUND WATER ADVISORY:

This chemical has properties and characteristics associated with chemicals detected in ground water. This chemical may leach into groundwater if used in areas where soils are permeable, particularly where the water table is shallow.

SURFACE WATER ADVISORY:

This product may impact surface water quality due to runoff of rain water. This is especially true for poorly draining soils and soils with shallow ground water. This product is classified as having high potential for reaching surface water via runoff for several months or more after application.

A level, well-maintained vegetative buffer strip between areas to which this product is applied and surface water features such as ponds, streams, and springs will reduce the potential loading of Flucarbazone-sodium from runoff water and sediment. Runoff of this product will be reduced by avoiding applications when rainfall or irrigation is expected to occur within 48 hours.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in any manner inconsistent with its labeling.

READ ENTIRE LABEL. USE STRICTLY IN ACCORDANCE WITH PRECAUTIONARY STATEMENTS, RESTRICTIONS AND DIRECTIONS, AND WITH APPLICABLE STATE AND FEDERAL REGULATIONS.

This product can only be used in accordance with the Directions for Use on this label.

DO NOT apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forest, nurseries and green houses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on the label about personal protective equipment (PPE), restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

DO NOT enter or allow worker entry into treated areas during this restricted entry interval (REI) of 12 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, including plants, soil or water, is:

- Coveralls
- Shoes plus socks
- Chemical-resistant gloves, made of waterproof materials.

NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses.

Keep children and pets out of treated area until spray solution has dried.

Product Information

This product is a selective systemic pre- and post-emergent herbicide for the control of various annual grasses including wild oat, green foxtail, Italian ryegrass, windgrass, cheat, barnyardgrass, Japanese brome and broad leaf weeds including redroot pigweed, wild mustard and shepherd's purse, in spring, durum and winter wheat and turf areas. This product also suppresses additional grass and broadleaf weeds, including yellow foxtail, downy brome, and wild buckwheat.

This product is absorbed by foliage and roots of susceptible weeds, which cease growth soon after application. Weed emergence is not necessary for control due to the soil residual activity provided by this product. However, maximum weed control may not be seen for one to two weeks, though susceptible weeds will stop growing and will no longer be competitive. For broader spectrum activity, this product may be tank mixed with a broadleaf herbicide listed on this label. See TANK MIXES section for recommended products.

The mode of action for sulfonylamino-carbonyl-triazoline herbicides is the inhibition of branched chain amino acid biosynthesis in susceptible plants by binding to the acetolactate synthase (ALS) enzyme. Since this product is an acetolactate synthase (ALS) inhibitor, and will therefore have activity on weed biotypes which have developed target site resistance to certain classes of herbicides, including ACCase inhibitors, dinitroanilines and triallates. See RESISTANCE MANAGEMENT section for additional information.

Weed Resistance Management

For resistance management, AG35620-B R334.2 70 WDG Herbicide is a Group 2 herbicide. Any weed population may contain or develop plants naturally resistant to AG35620-B R334.2 70 WDG Herbicide and other Group 2 herbicides. The resistant biotypes may dominate the weed population if these herbicides are used repeatedly in the same field. Appropriate resistance management strategies must be followed.

To delay herbicide resistance, take one or more of the following steps:

Rotate the use of AG35620-b R334.2 70 WDG Herbicide or other Group 2 herbicides within a growing season sequence or among growing seasons with different herbicide groups that control the same weeds in a field.

Use tank mixtures with herbicides from a different group if such use is permitted; where information on resistance in target weed species is available, use the less resistance-prone partner at a rate that will control the target weed(s) equally as well as the more resistance-prone partner. Consult your local extension service or certified crop advisor if you are unsure as to which active ingredient is currently less prone to resistance.

Adopt an integrated weed-management program for herbicide use that includes scouting and uses historical information related to herbicide use and crop rotation, and that considers tillage (or other mechanical control methods), cultural (e.g., higher crop seeding rates; precision fertilizer application method and timing to favor the crop and not the weeds), biological (weed-competitive crops or varieties) and other management practices.

Users must scout before and after herbicide application to monitor weed populations for early signs of resistance development. Indicators of possible herbicide resistance include: (1) failure to control a weed species normally controlled by the herbicide at the dose applied, especially if control is achieved on adjacent weeds; (2) a spreading patch of non-controlled plants of a particular weed species; (3) surviving plants mixed with controlled individuals of the same species. If resistance is suspected, prevent weed seed production in the affected area by an alternative herbicide from a different group or by a mechanical method for example hoeing or tillage. Prevent movement of resistant weed seeds to other fields by cleaning harvesting and tillage equipment when moving between fields, and planting clean seed.

If a weed pest population continues to progress after treatment with this product, discontinue use of this product, and switch to another management strategy or herbicide with a different mode of action, if available.

Contact your local extension specialist or certified crop advisors for additional pesticide resistance-management and/or integrated weed-management recommendations for specific crops and weed biotypes.

For further information or to report lack of performance or suspected resistance, contact your Aceto Life Sciences, LLC representative at (516) 627-6000 or Aceto@aceto.com.

DIRECTIONS FOR POSTEMERGENCE APPLICATIONS

This product is a selective herbicide for the control of wild oat, green foxtail, Italian ryegrass, windgrass, cheat, barnyardgrass, Japanese brome and numerous broadleaf weeds, including redroot pigweed, wild mustard and shepherd's purse, in spring, durum and winter wheat. This product also suppresses additional grass and broadleaf weeds, including yellow foxtail, downy brome, and wild buckwheat.

This product is absorbed by foliage and roots of susceptible weeds, which cease growth soon after application. Weed emergence is not necessary for control due to the soil residual activity provided by this product. However, maximum weed control may not be seen for one to two weeks, though susceptible weeds will stop growing and will no longer be competitive. For broader spectrum activity, this product may be tank mixed with a broadleaf herbicide listed on this label. See TANK MIXES section for recommended products.

DIRECTIONS FOR BURNDOWN APPLICATIONS

This product is a selective herbicide for use in glyphosate burndown applications for improved burndown control and early season residual control of green foxtail, wild oat, volunteer canola, cheat, Japanese brome and numerous other grass and broadleaf weeds, including winter annual weeds, in spring and winter wheat. Length of residual activity from this product is determined by soil type, moisture, weed species and weed population density.

This product is absorbed by foliage and roots of susceptible weeds, which cease growth soon after application. as this product is absorbed via roots by susceptible weeds, rainfall is necessary for acceptable performance when applied preplant or pre-emergence. If environmental conditions **DO NOT** favor root uptake by target weeds, a follow-up postemergence application is suggested for improved performance. For broader spectrum activity, this product may be tank mixed with a broadleaf herbicide listed on this label. See TANK MIXES FOR BURNDOWN APPLICATIONS section for recommended products. Some weed emergence may be observed during or after planting; scout fields at the 2 to 3 leaf stage of the crop to determine if an additional application of a grass and/or broadleaf herbicide product is necessary.

The use of other ALS inhibitors in combination or sequentially can increase the potential for crop damage or lengthen rotational crop intervals on soils with low organic matter (OM) and high pH.

Not all spring and winter wheat varieties have been tested for tolerance. Some varieties may be known for sensitivity to ALS-inhibitors. Follow local recommendations for varietal sensitivity. It is advised that this product be tank mixed with an herbicide containing glyphosate when making a burndown application. The tank mix must be used in accordance with the more restrictive label limitations and precautions for all products used.

USE RESTRICTIONS – ALL USE SITES

- **DO NOT** grazed within 15 days of application.
- **DO NOT** harvest wheat forage or hay until 15 days after last application.
- **DO NOT** harvest wheat grain or straw until 60 days after the last application.
- **DO NOT** mix, load or clean spray equipment within 33 feet of well-heads or aquatic systems, including marshes, ponds, ditches, streams, lakes, etc.
- **DO NOT** apply within 50 feet of well-heads or the above-mentioned aquatic systems.
- **DO NOT** apply postemergence when rain is expected within the next hour.
- **DO NOT** allow this chemical to drift onto other crops.
- **DO NOT** apply this product through any type of irrigation system.
- **DO NOT** use flood irrigation to apply or incorporate this product.
- For Idaho, use only in the counties of Benewah, Boundary, Bonner, Clearwater, Idaho, Kootenai, Latah, Lewis, Nez Perce, and Shoshone. Use in all other counties of Idaho is prohibited.
- **DO NOT** allow sprays to drift onto adjacent desirable plants.
- **DO NOT** apply to gravelly soils or highly eroded soils.
- **DO NOT** apply preplant or pre-emergence to durum wheat.
- **DO NOT** apply preplant or pre-emergence if in-furrow applications of organophosphate insecticides have been made.
- **DO NOT** apply more than 0.6 oz. (0.027 lb. ai)/A of this product per year.
- **DO NOT** exceed a combined total of 0.6 oz. (0.027 lb. ai)/A of this product per year when using a post-emergence herbicide product containing flucarbazone-sodium.
- **DO NOT** apply to “Choteau” spring wheat.

MIXING INSTRUCTIONS

This product is a water dispersible granule designed to be diluted with water at the rates listed in the specific crop use directions. Fill the spray tank with approximately ½ of the desired volume with water or carrier. With the agitation operating, add the specified amount of the formulation as listed in the targeted crop use directions. Complete the filling process while maintaining agitation. Remove the hose from the mixing tank immediately after filling to avoid siphoning back into the carrier source. Add nonionic surfactant and other spray additives as the last ingredients in the tank. Allow time to fully disperse.

Since this product forms a suspension in water, it is important to maintain good agitation during mixing and spraying. If the spray suspension is allowed to settle for a short period of time, be sure to agitate the spray suspension for a minimum 10 minutes. Apply spray suspensions within 24 hours after mixing.

Spray Equipment Cleanout

The mix tank and spray equipment cleanout are an important stewardship activity to avoid injury to desirable crops. It is important to clean all mixing and spraying equipment immediately after use and before using pesticide products including this product.

To clean the spraying equipment, follow the procedure outlined below:

- Completely drain the mix tank and/or sprayer, and then wash thoroughly the tank, sprayer, boom and nozzles with clean water. Drain the system again.
- Fill the mixing or spray tank half full with clean water and add domestic ammonium, normally a 3% v/v solution, at a dilution rate of 1% v/v ammonium or 1 gallon per 100 gallons of rinsate.
- Completely fill the tank(s) with additional clean water. Agitate and recirculate and flush out the boom and hoses. Let the system run for 10 – 15 minutes. Drain the system completely.
- Remove nozzles and screens and dislodge any visible solid material. Then soak them in a 1% v/v ammonium solution. Inspect the nozzles and screen and remove any visual residues.
- Repeat the above procedure for a second time.
- Flush the mix tank and/or sprayer, boom and hoses with clean water. Drain the system again and inspect for any visible residues. If present, repeat the cleaning cycle again.
- If the rinsate cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

MANDATORY SPRAY DRIFT

Aerial Applications:

- **DO NOT** release spray at a height greater than 10 ft. above the ground or vegetative canopy, unless a greater application height is necessary for pilot safety.
- For applications prior to the emergence of crops and target weeds, applicators are required to use a coarse or coarser droplet size (ASABE S572.1).
- For all other applications, applicators are required to use a medium or coarser droplet size (ASABE S572.1).
- Applicators must use ½ swath displacement upwind at the downwind edge of the field.
- **DO NOT** apply when wind speeds exceed 15 mph at the application site. If windspeed is greater than 10 mph, the boom length must be 65% or less of the wingspan for fixed-wing aircraft or 75% or less of the rotor blade diameter for helicopters. Otherwise, the boom length must be 75% or less of the wingspan for fixed-wing aircraft and 90% or less of the rotor diameter for helicopters.
- **DO NOT** apply during temperature inversions.

Ground Boom Applications:

- Apply with the nozzle height specified by the manufacturer, but no more than 3 feet above the ground or crop canopy unless making a turf, pasture, or rangeland application, in which case applicators may apply with a nozzle height no more than 4 feet above the ground.
- For applications prior to the emergence of crops and target weeds, applicators are required to use a coarse or coarser droplet size (ASABE S572.1).
- For all other applications, applicators are required to use a medium or coarser droplet size (ASABE S572.1).
- **DO NOT** apply when wind speeds exceed 15 miles per hour at the application site.
- **DO NOT** apply during temperature inversions.

Boom-less Ground Applications:

- Applicators are required to use a Medium or coarser droplet size (ASABE S572.1) for all applications.
- **DO NOT** apply when wind speeds exceed 15 miles per hour at the application site.
- **DO NOT** apply during temperature inversions.

SPRAY DRIFT ADVISORIES

THE APPLICATOR IS RESPONSIBLE FOR AVOIDING OFF-SITE SPRAY DRIFT.
BE AWARE OF NEARBY NON-TARGET SITES AND ENVIRONMENTAL CONDITIONS.

IMPORTANCE OF DROPLET SIZE

An effective way to reduce spray drift is to apply large droplets. Use the largest droplets that provide target pest control. While applying larger droplets will reduce spray drift, the potential for drift will be greater if applications are made improperly or under unfavorable environmental conditions.

Controlling Droplet Size – Ground Boom

- Volume - Increasing the spray volume so that larger droplets are produced will reduce spray drift. Use the highest practical spray volume for the application. If a greater spray volume is needed, consider using a nozzle with a higher flow rate.
- Pressure - Use the lowest spray pressure specified for the nozzle to produce the target spray volume and droplet size.
- Spray Nozzle - Use a spray nozzle that is designed for the intended application. Consider using nozzles designed to reduce drift.

Controlling Droplet Size – Aircraft

- Adjust Nozzles - Follow nozzle manufacturer’s instructions for setting up nozzles. Generally, to reduce fine droplets, nozzles must be oriented parallel with the airflow in flight.

BOOM HEIGHT – Ground Boom

- Use the lowest boom height that is compatible with the spray nozzles that will provide uniform coverage. For ground equipment, the boom must remain level with the crop and have minimal bounce.

RELEASE HEIGHT - Aircraft

Higher release heights increase the potential for spray drift. When applying aerially to crops, **DO NOT** release spray at a height greater than 10 ft. above the crop canopy, unless a greater application height is necessary for pilot safety.

SHIELDED SPRAYERS

Shielding the boom or individual nozzles can reduce spray drift. Consider using shielded sprayers. Verify that the shields are not interfering with the uniform deposition of the spray on the target area.

TEMPERATURE AND HUMIDITY

When making applications in hot and dry conditions, use larger droplets to reduce effects of evaporation.

TEMPERATURE INVERSIONS

Drift potential is high during a temperature inversion. Temperature inversions are characterized by increasing temperature with altitude and are common on nights with limited cloud cover and light to no wind. The presence of an inversion can be indicated by ground fog or by the movement of smoke from a ground source or an aircraft smoke generator. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing. Avoid applications during temperature inversions.

WIND

Drift potential generally increases with wind speed. **AVOID APPLICATIONS DURING GUSTY WIND CONDITIONS.**

Applicators need to be familiar with local wind patterns and terrain that could affect spray drift.

Boom-less Ground applications:

- Setting nozzles at the lowest effective height will help to reduce the potential for spray drift.

Handheld Technology Applications:

- Take precautions to minimize spray drift.

ENDANGERED SPECIES PROTECTION

To avoid adverse effects on endangered dicot plant species, the following measures will be required where endangered plant species occur in the counties listed in the table below:

State	County
Idaho	Idaho, Lewis, and Nez Perce
Minnesota	Brown, Cottonwood, Goodhue, Jackson, and Renville
Montana	Flathead, and Lake
Oregon	Benton, Clackamas, Lane, Linn, Marion, Polk, Union, Wallowa, Washington, and Yamhill
Washington	Asotin, Chelan, Cowlitz, Lewis, Lincoln, Spokane, and Whitman
Wyoming	Laramie

For ground applications, the applicator must:

- Apply when there is sustained wind away from native plant communities, OR
- Use low-pressure nozzles according to manufacturer’s specifications that produce only coarse or very coarser (ASABE S572-1) droplets, OR
- Leave a 50 foot untreated buffer between the treatment and native plant communities

For aerial applications, the applicator must:

- Apply only when there is sustained wind away from native plant communities, OR
- Leave a 350 foot untreated buffer between the treatment and native plant communities

POSTEMERGENCE USE DIRECTIONS - FOR SPRING, DURUM AND WINTER WHEAT

APPLICATION PROCEDURES

Best weed control is observed when environmental conditions support vigorous growth of crop and weeds. Research has demonstrated that optimum wheat yield is obtained by early removal of grassy weeds. Apply this product to spring wheat prior to jointing, when the majority of plants have from one leaf to a maximum of 4 leaves on the main stem plus two tillers. For winter wheat, apply either in the fall or spring when the majority of plants have one leaf to full tillering, but prior to jointing.

This product must not be applied after jointing begins to avoid the risk of crop injury.

USE RESTRICTIONS

DO NOT apply more than 0.6 oz. (0.027 lb. ai)/A of this product per year.

If this product has been applied either preplant or pre-emergence to the crop, **DO NOT** exceed a combined total of 0.027 lb. flucarbazone-sodium/A of both applications per year (equal to a combined total of 0.6 oz. (0.027 lb. ai)/A of this product per year).

DO NOT make more than one post emergence application of this product per year.

DO NOT grazed within 15 days of application.

DO NOT harvest wheat forage or hay until 15 days after last application.

DO NOT harvest wheat grain or straw until 60 days after the last application.

DO NOT apply to “Choteau” spring wheat.

GROUND APPLICATION

Apply in a spray volume of 5 to 10 gal/A at 30 to 50 psi to ensure proper weed coverage. Flat fan nozzles of 80 or 110 degrees are advised for optimum coverage. **DO NOT** use floodjet or control droplet application equipment. Nozzles may be oriented 45 degrees forward to enhance crop penetration and to give better weed coverage.

AERIAL APPLICATION

Apply in water using a minimum spray volume of 3 gal/A. For best results, use a minimum of 5 gal/A under dry conditions or heavy weed infestations.

DO NOT allow spray to drift onto adjacent crops, as injury or loss may occur.

See the *SPRAY DRIFT MANAGEMENT* section of this label for additional information on how to reduce drift during aerial application.

USE RATES AND TIMING OF APPLICATION

Timing of Postemergence Application to Wheat	
Crop	Growth Stage
Durum & Spring Wheat	Apply prior to jointing, from 1 leaf to a maximum of 4 leaves on the main stem plus 2 tillers.
Winter Wheat	Fall application: minimum of 1 leaf.
	Spring application: apply as soon as wheat growth resumes, from 1 leaf minimum to full tillering but before jointing begins.

Wheat exposed to water logged or saturated soils or temperature extremes including hot or freezing weather, drought, low fertility or plant disease immediately prior to or after application could result in unacceptable injury symptoms. Weed control may also be reduced by these same conditions.

Specified Rates of Application for Grass & Broadleaf Weeds		
Rate	Target Weeds	Growth Stage & Remarks
0.3 oz/A (0.013 lb. ai)	Green Foxtail (<i>Setaria viridis</i>)	1 leaf to 6 total leaves ¹
	Redroot Pigweed (<i>Amaranthus retroflexus</i>)	
	Wild Mustard (<i>Brassica kaber</i>)	
0.4 oz/A (0.018 lb. ai)	All weeds listed at the 0.3 oz/A rate and the following:	
	Wild Oat (<i>Avena fatua</i>)	Low to moderate infestations 1 leaf to 6 total leaves ¹
	Volunteer Tame Oat (<i>Avena sativa</i>)	Low to moderate infestations 1 leaf to 6 total leaves ¹
	Barnyardgrass (<i>Echinochloa crus-galli</i>)	1 leaf to 6 total leaves ¹
	Windgrass (<i>Apera spica-venti</i> and <i>Apera interrupta</i>)	1 leaf to 6 total leaves ¹
	Black Mustard (<i>Brassica nigra</i>)	
	Blue Mustard (<i>Chorispora tenella</i>)	
	Curly Dock (<i>Rumex crispus</i>)	
	Field Pennycress (<i>Thlaspi arvense</i>)	
	Ladysthumb (<i>Polygonum persicaria</i>)	
	Pennsylvania Smartweed (<i>Polygonum pennsylvanicum</i>)	
	Shepherd's Purse (<i>Capsella bursa-pastoris</i>)	
	Tansy Mustard (<i>Descurania pinnata</i>)	
	Tumble Mustard (<i>Sisymbrium altissimum</i>)	
	Volunteer Canola (conventional) (<i>Brassica rapa</i> ssp. <i>Canola</i>)	
Wild Turnip (<i>Brassica rapa</i> ssp. <i>Slyvestris</i>)		

Rate	Target Weeds	Growth Stage & Remarks
0.6 oz/A (0.027 lb. ai)	All weeds listed at the 0.3 oz/A and 0.4 oz/A rates and the following:	
	Wild Oat (<i>Avena fatua</i>)	High infestations or when tank mixed with dicamba ² 1 leaf to 6 total leaves ¹
	Cheat (True Cheat) (<i>Bromus secalinus</i>)	Apply when actively growing Fall Application: Control Spring Application: Control ³ or Suppression
	Japanese Brome (<i>Bromus japonicus</i>)	Apply when actively growing Fall Application: Control Spring Application: Control ³ or Suppression
	Downy Brome (<i>Bromus tectorum</i>)	Suppression ⁴ Apply when actively growing
	Italian Ryegrass (<i>Lolium multiflorum</i>)	Control ³ or Suppression 1 leaf to tillering ⁵
	Persian Darnel (<i>Lolium persicum</i>)	Suppression 1 leaf to 6 total leaves ¹
	Foxtail Barley (<i>Hordeum jubatum</i>)	Suppression 1 leaf to 6 total leaves ¹
	Yellow Foxtail (<i>Setaria glauca</i>)	Suppression 1 leaf to 6 total leaves ¹
	Flixweed (<i>Descurania sophia</i>)	
	Small Seeded False Flax (<i>Camelina microcarpa</i>)	
	Burr Buttercup (<i>Ranunculus testiculatus</i>)	Suppression
	Common Waterhemp (<i>Amaranthus tamariscinus</i>)	Suppression
	Tall Wormseed Wildflower (<i>Erysimum cheiranthoides</i>)	Suppression
	Wild Buckwheat (<i>Polygonum convolvulus</i>)	Suppression

¹ 1 leaf to 4 leaves on main stem plus 2 tillers

² If this product is applied in a tank mix combination with a dicamba-containing broadleaf herbicide, wild oat control may be reduced.

³ Control is achieved by using 1 qt of non-ionic surfactant per 100 gal of spray solution (0.25 %v/v) + either liquid nitrogen fertilizer (2 qt/A and up to 50% of spray solution volume) OR ammonium sulfate fertilizer (nitrogen rate equivalent to 1.5 lb./A). Applications of liquid nitrogen fertilizer may result in temporary leaf burn or discoloration.

⁴ Suppression is achieved by using 1 qt of non-ionic surfactant per 100 gal of spray solution (0.25 %v/v) + either liquid nitrogen fertilizer (2 qt/A and up to 50% of spray solution volume) OR ammonium sulfate fertilizer (nitrogen rate equivalent to 1.5 lb./A). Applications of liquid nitrogen fertilizer may result in temporary leaf burn or discoloration.

⁵ 1 leaf to 4 leaves on main stem until end of tillering.

ADJUVANT USE RATES

This product as a standalone or tank mix treatment may be mixed with adjuvants according to the following recommendations. When an adjuvant is to be used with this product, Aceto Life Sciences, LLC recommends the use of a Chemical Producers and Distributors Association (CPDA) certified adjuvant.

Specified Adjuvant Use Rates	
This product tank mixed with glyphosate	<ul style="list-style-type: none"> Follow the recommendations on the glyphosate label
This product alone	<ul style="list-style-type: none"> Use 1 qt of non-ionic surfactant per 100 gallons (0.25% v/v) Spray-Grade ammonium sulfate fertilizer at 0.75-1.5 lb./A can be used in addition to the non-ionic surfactant.
This product with liquid nitrogen fertilizer	<ul style="list-style-type: none"> Always pre-slurry this product in clean water and agitate continuously. Add up to 50% v/v of 28-32% UAN.

Specified Adjuvant Use Rates for Turf	
This product alone or with amine water soluble herbicides	<ul style="list-style-type: none"> Use 1 qt of non-ionic surfactant per 100 gal (0.25% v/v) OR A high quality basic blend at 2 qt per 100 gal (0.5% v/v) OR A methylated seed oil (MSO) at 1.5 pt./A + ammonium sulfate fertilizer (AMS) at 1.5 lb./A
This product with ester or EC base herbicides	<ul style="list-style-type: none"> DO NOT add surfactant
This product with sulfonyleurea herbicides + 2,4-D or dicamba ¹	<ul style="list-style-type: none"> Use 1 pint of non-ionic surfactant per 100 gal (0.125% v/v) DO NOT add surfactant if mixing with an ester or EC base 2,4-D
¹ For this product applicants applied in a tank mix combination with dicamba-containing broadleaf herbicide, wild oat control may be reduced.	

TANK MIX PARTNERS

For broader spectrum control of broadleaf weeds, this product may be mixed with the broadleaf herbicides listed in the following table. Depending on the tank mix partner, an adjuvant may be included in the spray solution. See *ADJUVANT USE RATES* section.

It is the pesticide user’s responsibility to ensure that all products in the listed mixtures are registered for the intended use. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

If this product is to be tank mixed with other herbicides, conduct a compatibility test prior to mixing. Use a small container and mix all components in a small amount, usually 0.5 to 1 quart of spray. Combine all products in the same ratio and order of addition as in the proposed spray mixture. Observe the mixture for indication of incompatibility which usual occurs in 10 to 30 minutes after mixing. If incompatibility is observed, try changing the order of addition of the components. The guideline on tank mixture partners is driven by formulation type. Start with wettable powders (WP’s) including water soluble bags (WSB’s), water dispersible granules (WDG’s), suspension concentrated (SC’s) or flowable (F’s), all with very good agitation. Next follow with water miscible concentrates and emulsifiable concentrates (EC’s) before adding drift control additives, nonionic surfactants (NIS’s). After vigorous agitation, there must be a homogeneous suspension. Let the final tank mixture stand and observe for any rapid settling or floating of components. If any indications of physical incompatibility develop, **DO NOT** use this mixture for spraying.

This product Tank Mix Partners¹
2,4-D Amine (4 lb./gal)
2,4-D Lo Volatile Ester (4 lb./gal)
2,4-D Lo Volatile Ester (6 lb./gal)
Aim [®] (EPA Reg. No. 279-3241, carfentrazone-ethyl)
Bromoxynil (2 lb./gal)
Bromoxynil + MCPA (2 + 2 lb./gal)

USE DIRECTIONS FOR BURNDOWN APPLICATIONS IN SPRING AND WINTER WHEAT

APPLICATION PROCEDURES

GROUND APPLICATION

Apply in a spray volume of 5 to 10 gal/A

AERIAL APPLICATION

Apply in water using a minimum spray volume of 3 gal/A. For best results, use a minimum of 5 gal/A.

See the *SPRAY DRIFT MANAGEMENT* section of this label for additional information on how to reduce drift during aerial application.

USE RATES AND TIMING OF APPLICATION

PREPLANT OR PRE-EMERGENCE APPLICATIONS ONLY

Apply this product at burndown (preplant or pre-emergence to the crop), preferably with a herbicide containing glyphosate. Refer to the glyphosate product label for use directions and application recommendations.

This product removes early flushes of grass and small seeded broadleaf weeds and can enhance the burndown control of weeds when in combination with glyphosate. For season long control a sequential application of a grass or broadleaf herbicide is required.

Research has shown that removal of early weed competition in combination with good agronomic practices maximizes wheat yield potential. This product works best when used in combination with good fertility and uniform wheat stands.

Residual performance may be reduced if applied more than 10 days prior to seeding or if activating rainfall is not received within 10 days of application.

This product is not affected by normal plant residue associated with no-till practices. Extremely heavy residue situations may delay This product's contact with the soil and result in reduced performance.

USE RESTRICTIONS

DO NOT apply more than 0.6 oz. (0.027 lb. ai)/A of this product per year.

If this product has been applied either preplant or pre-emergence to the crop, **DO NOT** exceed a combined total of 0.027 lb. flucarbazone-sodium/A of both applications per year (equal to a combined total of 0.6 oz. (0.027 lb. ai)/A of this product per year).

DO NOT make more than one post emergence application of this product per year.

DO NOT apply preplant or pre-emergence to durum wheat.

DO NOT apply preplant or pre-emergence if in-furrow applications of organophosphate insecticides have been made.

DO NOT apply to "Choteau" spring wheat.

Winter Wheat Use Rates

For winter wheat apply this product on soils with organic matter greater than 1.0% and pH less than 8.0.

Application Rate for Winter Wheat Based on Soil pH and Soil Organic Matter (OM)			
Soil pH	OM 1.0-1.4%	OM 1.5-2.0%	OM > 2.0%
pH 7.5-8.0	0.2 oz/A (0.009 lb. ai)/A	0.25 oz/A (0.011 lb. ai)/A	0.3 oz/A (0.013 lb. ai)/A
pH < 7.5	0.3 oz/A (0.013 lb. ai)/A	0.3 oz/A (0.013 lb. ai)/A	0.3 oz/A (0.013 lb. ai)/A

Spring Wheat Use Rates

For spring wheat apply this product on soils with organic matter greater than 1.5% and pH less than 7.8.

Application Rate for Spring Wheat Based on Soil pH and Soil Organic Matter (OM)			
Soil pH	OM 1.5-2.0%	OM 2.1-2.5%	OM > 2.5%
pH 7.5-7.8	0.15-0.2 oz/A (0.007-0.009 lb. ai)/A	0.2-0.25 oz/A (0.009-0.011 lb. ai)/A	0.25-0.3 oz/A (0.011-0.013 lb. ai)/A
pH 7.0-7.4	0.2-0.25 oz/A (0.009-0.011 lb. ai)/A	0.25-0.3 oz/A (0.011-0.013 lb. ai)/A	0.3 oz/A (0.013 lb. ai)/A
pH < 7.0	0.3 oz/A (0.013 lb. ai)/A	0.3 oz/A (0.013 lb. ai)/A	0.3 oz/A (0.013 lb. ai)/A

Early Season Residual Control and Control of Emerged Weeds with Thus Product ¹	
Target Weeds	Remarks
Green Foxtail ² (<i>Setaria viridis</i>)	This product provides season long control.
Wild Oat (<i>Avena fatua</i>)	This product controls early flushes. Moderate to heavy infestations require a sequential treatment with a labeled grass herbicide.
Cheat (True Cheat) (<i>Bromus secalinus</i>)	
Japanese Brome (<i>Bromus japonicus</i>)	
Downy Brome (<i>Bromus tectorum</i>)	This product suppresses early flushes. Season long control requires a sequential treatment with a labeled grass herbicide.
Rescuegrass (<i>Bromus catharticus</i>)	
Italian Ryegrass (<i>Lolium multiflorum</i>)	

Early Season Residual Control and Control of Emerged Weeds with This Product ¹	
Target Weeds	Remarks
Yellow Foxtail (<i>Setaria glauca</i>)	This product will provide control of 2 to 3 inch emerged broadleaf weeds and provide residual control of early flushes.
Persian Darnel (<i>Lolium persicum</i>)	
Barnyardgrass (<i>Echinochloa crus-galli</i>)	
Foxtail Barley (<i>Hordeum jubatum</i>)	
Redroot Pigweed (<i>Amaranthus retroflexus</i>)	
Wild Mustard (<i>Brassica kaber</i>)	
Black Mustard (<i>Brassica nigra</i>)	
Blue Mustard (<i>Chorispora tenella</i>)	
Field Pennycress (<i>Thlaspi arvense</i>)	
Shepherd's Purse (<i>Capsella bursa-pastoris</i>)	
Tansy Mustard (<i>Descurania pinnata</i>)	
Flixweed (<i>Descurania sophia</i>)	
Tumble Mustard (<i>Sisymbrium altissimum</i>)	
Volunteer Canola ² (conventional & Roundup Ready) (<i>Brassica rapa</i> ssp. <i>Canola</i>)	
Wild Turnip (<i>Brassica rapa</i> ssp. <i>Slyvestris</i>)	

Early Season Residual Control and Control of Emerged Weeds with This Product ¹	
Target Weeds	Remarks
Henbit (<i>Lamium amplexicaule</i>)	This product will provide suppression of 2 to 3 inch emerged wild buckwheat and provide residual suppression of early flushes.
Wild Buckwheat (<i>Polygonum convolvulus</i>)	

¹ This product used at rates below 0.3 oz. (0.013 lb. ai)/A may have less burndown control or residual suppression of weeds listed above.

² If heavy rainfall is received after application residual control of green foxtail and volunteer canola may be reduced.

TANK MIXES FOR BURNDOWN APPLICATIONS

It is advised that this product be tank mixed with glyphosate for broad spectrum activity when making a burndown application. With all tank mix partners, read and follow the use directions, rates, precautions, timing, recropping restrictions, grazing interval restrictions and recommendations on broadleaf herbicide and surfactant labels. The tank mix must be used in accordance with the more restrictive label limitations and precautions for all pesticides used.

Tank Mix Partners For Enhanced Burndown	
2,4-D Amine (4 lb./gal)	
2,4-D Ester	
Affinity Tankmix (EPA Reg. No. 279-9599, thifensulfuron, tribenuron-methyl)	
Affinity BroadSpec (EPA Reg. No. 279-9601, thifensulfuron, tribenuron-methyl)	
Aim (EPA Reg. No. 279-3241, carfentrazone-ethyl)	
Ally XP (Winter wheat only) (EPA Reg. No. 279-9575, metsulfuron-methyl)	
Audit 1:1 (EPA Reg. No. 66330-418, thifensulfuron, tribenuron-methyl)	
Audit 4:1 (EPA Reg. No. 66330-419, thifensulfuron, tribenuron-methyl)	
Dicamba ¹	
Finesse (Winter wheat only) (EPA reg. No. 279-9610, chlorsulfuron, metsulfuron-methyl)	
Glyphosate	
Sharnen [®] (EPA Reg. No. 62719-577, safufenacil)	
¹ If this product is applied in a tank mix combination with a dicamba- containing broadleaf herbicide, wild oat control may be reduced.	

Tank Mix Partners for Enhanced Residual Control in Winter Wheat	
Outrider [®] (EPA Reg. No. 59639-223, sulfosulfuron)	Add Outrider at 0.2-0.33 oz. (0.0014 – 0.0155 lb. ai)/A to increase residual activity on brome species. Follow the restrictions on the Outrider label when using this tank mixture.

USE DIRECTIONS FOR TURF USE

This product is a selective, post emergence herbicide for control and suppression of numerous grassy and broadleaf weeds. See the list below for the weeds controlled or suppressed. This product is absorbed by foliage and roots of susceptible weeds, which cease growth soon after application. However maximum weed control may not be seen for one to three weeks, though susceptible weeds will stop growing and will no longer be competitive. For broader spectrum activity, this product may be tank mixed with other labeled turfgrass herbicides.

This product is an acetolactate synthase (ALS) inhibitor, and will control weed biotypes which have developed target site resistance to certain classes of herbicides, including ACCase inhibitors, dinitroanilines and triallates. See “RESISTANCE MANAGEMENT” section for additional information.

Turfgrass Tolerance:

This product may be used on seeded, sodded, or sprigged turf. The use of this product on turf that is not well established, that has been weakened by weather, pests, diseases, chemicals, mechanical or other related stresses, may result in severe turf injury.

When applied as directed under the conditions described, the following established turfgrasses are tolerant to this product. Note that higher rates and higher temperatures may cause more yellowing than other conditions. Temporary yellowing of the turf may occur after application. This effect is temporary and the turf will recover in a few days while the weeds continue to decline.

The following turfgrass species have been determined to be tolerant to applications of this product. For use on other turfgrass species, spray a small area of the turf and observe it for two weeks to determine turf safety before spraying large areas.

Cool-Season Grasses	
Bentgrass, Creeping	<i>Agrostis palustris</i>
Bluegrass, Annual	<i>Poa annua</i>
Bluegrass, Kentucky	<i>Poa pratensis</i>
Fescue, Fine	<i>Festuca rubra</i>
Fescue, Tall	<i>Festuca arundinacea</i>
Warm-Season Grasses	
Bahia grass	<i>Paspalum notatum</i>
Bermuda grass	<i>Cynodon dactylon</i>
Buffalo grass	<i>Buchloe dactyloides</i>
Centepede grass	<i>Eremochloa ophiuroides</i>
St. Augustine grass	<i>Stenotaphrum secundatum</i>
Zoysia grass	<i>Zoysia japonica</i>
Seashore paspalum	<i>Paspalum vaginatum</i>

PRECAUTIONS FOR TURF:

- Use on golf course greens and tees is the sole responsibility of the end user and Aceto Life Science, LLC does not recommend or accept any liability for turf injury on these sites.
- Use on turf species other than what are listed on the label is the sole responsibility of the end user and Aceto Life Science, LLC does not recommend or accept any liability for turf injury on these sites.
- Avoid applications when turfgrasses are under stress as injury may result.
- Applications must be made to actively-growing weeds.
- Allow at least one week between last application and overseeding with winter grasses for winter cover.

Turfgrass Sites

This product can be used on turfgrass growing on golf course fairways and roughs, seed and sod production fields, commercial and residential sites (including homes, schools, playgrounds, parks, recreational areas and sports fields, common areas).

APPLICATION

Apply this product only with ground equipment.

MIXING INSTRUCTIONS

This product is a water dispersible granule designed to be diluted with water at the rates listed in the specific crop use directions. Fill the spray tank with approximately ½ of the desired volume with water or carrier. With the agitation operating, add the specified amount of the formulation as listed in the targeted crop use directions. Complete the filling process while maintaining agitation. Remove the hose from the mixing tank immediately after filling to avoid siphoning back into the carrier source. Add nonionic surfactant and other spray additives as the last ingredients in the tank. Allow time to fully disperse.

Since this product forms a suspension in water, it is important to maintain good agitation during mixing and spraying. If the spray suspension is allowed to settle for a short period of time, be sure to agitate the spray suspension for a minimum 10 minutes. Apply spray suspensions within 24 hours after mixing.

Ground Broadcast and Spot Treatment

Accurately calibrate the sprayer prior to mixing the herbicide treatments. Apply this product and the labeled tank mix partners in a minimum of 20 gal of total spray volume per acre using broadcast boom equipment or hand held single nozzle equipment. Application must be made at a sufficient spray pressure and volume to provide accurate and uniform application of spray particles to a given area without causing spray drift to non- target areas. If mixed with other labeled herbicides, the spray volume may be no less than the minimum volume specified by any tank mix product used or 20 gal, whichever is greater. Use appropriately sized mesh screens and in-line strainers. Flat fan nozzles of 80 or 110 degrees are specified for optimum coverage. Agitate thoroughly before and during application with either bypass or mechanical agitation. Rinse the sprayer thoroughly with clean water immediately after each use.

APPLICATION METHODS

Apply this product as a postemergence application to actively-growing broadleaf and grass weeds that are in the seedling growth stage. Large mature weeds will not be effectively controlled with this product. A nonionic surfactant with at least 80% active ingredients must be added at 0.25% v/v (2.0 pts/100gal of spray mix) to the spray mix.

DO NOT apply when environmental conditions favor drift to non-target areas.

For broader spectrum control of weeds and/or to provide extended pre-emergence weed control, this product may be mixed with other herbicides labeled for turf. With all tank mix partners, read and follow the use directions, rates, precautions, timing, restrictions and recommendations on the other herbicide and surfactant labels. The tank mix must be used in accordance with the more restrictive label limitations and precautions for all pesticides used.

WEEDS CONTROLLED or SUPPRESSED*	
Grasses	Broadleaf Weeds
Barnyardgrass (<i>Echinochloa crus-galli</i>)*	Bur buttercup (<i>Ceratocephala testiculata</i>)
Cheat (<i>Bromus secalinus</i>)	Black mustard (<i>Brassica nigra</i>)
Downy brome (<i>Bromus tectorum</i>)*	Blue mustard (<i>Chorispora tenella</i>)
Green foxtail (<i>Setaria viridis</i>)	Common waterhemp (<i>Amaranthus tuberculatus</i>)
Foxtail barley (<i>Hordeum jubatum</i>)*	Curly dock (<i>Rumex crispus</i>)
Italian ryegrass (<i>Lolium multiflorum</i>) *	Field pennycress (<i>Thlaspi arvense</i>)
Japanese brome (<i>Bromus japonicas</i>)	Flixweed (<i>Descurainia sophia</i>)
Perennial ryegrass (<i>Lolium perenne</i>)	Ladysthumb (smartweed) (<i>Polygonum persicaria</i>)
Persian darnel (<i>Lolium persicum</i>)*	Large hop clover (<i>Trifolium aureum</i>)
Rattail fescue (<i>Vulpia myuros</i>)	Pennsylvania smartweed (<i>Polygonum pennsylvanicum</i>)

	Tansy mustard (<i>Descurania pinnata</i>)
	Small seeded false flax (<i>Camelina microcarpa</i>)
	Wild buckwheat (<i>Polygonum convolvulus</i>)
	Wild mustard (<i>Brassica kaber</i>)
	White clover (<i>Trifolium repens</i>)*

Cool-season and warm-season turfgrasses: This product at 0.3-0.6 oz. (0.013-0.027 lb. ai) product per acre may be applied to established labeled cool- and warm-season turfgrasses and to newly-established Kentucky bluegrass that has a minimum of 2 to 4 leaves.

DO NOT apply more than 0.6 oz. (0.027 lb. ai)/A/year.

Seedhead Suppression:

Bahiagrass: Apply this product at 0.2–0.6 oz. (0.009-0.027 lb. ai)/A after full spring transition (green-up) to suppress bahiagrass seedhead emergence. Application must be made before seedheads emerge, or 1 to 3 days after mowing. Tank mix other labeled grass herbicides with this product in order to increase the number of weed species controlled. repeat applications may be made so long as no more than 0.6 oz. (0.027 lb. ai)/A are made per year.

Annual Bluegrass and Other Grasses: Apply this product at 0.2–0.6 oz. (0.009-0.027 lb. ai)/A before seed heads emerge in the spring. Application must be made before seedheads emerge. Repeat applications may be made so long as no more than 0.6 oz. (0.027 lb. ai)/A are made per year.

Growth Management in Turfgrass

This product will aid in control of excessive growth of selected turfgrasses and increase turf quality. Apply at 0.3–0.6 oz. (0.013-0.027 lb. ai)/A. Repeat applications may be made so long as no more than 0.6 oz. (0.027 lb. ai)/A are made per year. Make subsequent applications at 30 to 60 day intervals.

Removal of over seeded perennial ryegrass from bermudagrass during Spring Transition

Use this product at rates of 0.3-0.6 oz. (0.013-0.027 lb. ai)/A in the spring to aid in the transition to bermudagrass. The lower rate will allow for a more gradual transition from perennial ryegrass to bermudagrass. A second low rate application may be made 14 to 21 days after the first application. Alternatively, apply 0.6 oz. (0.027 lb. ai) per acre to allow for quicker transition. This product may be less aggressive than other herbicides which allows for a more gradual transition to bermudagrass. Make sure there is a good bermudagrass base before applying this product.

Use of This Product as a Herbicide Safener:

This product will decrease bleaching due to carotenoid biosynthesis inhibitor herbicide (mesotrione) applications in bermuda grass, zoysia grass and St. Augustine grass and other grasses. This product may not totally prevent injury due to carotenoid biosynthesis inhibitors. However, injury from this tank mix is less than when carotenoid biosynthesis inhibitors are applied alone. Users are advised to determine turfgrass tolerance to mesotrione + this product tank mixes at their site. A small treated area must be observed for 2 weeks after application. If injury does not occur or is considered acceptable, then the remaining turfgrass area may be sprayed. The level of weed control normally achieved with these two herbicides is not adversely affected when combined in a tank mix.

Weed Control in Conifers in Nurseries and Field Plantings (including Christmas trees)

This product can be used over-the-top or as a directed spray under the canopy in conifer nurseries and field plantings (including Christmas trees). Apply this product at 0.3–0.6 oz. (0.013-0.027 lb. ai)/A to actively growing weeds listed above.

RESTRICTIONS FOR TURF AND CONIFERS:

- **DO NOT** apply more than 0.6 oz. (0.027 lb. ai) per acre per application.
- **DO NOT** make more than two applications per year.
- The minimum retreated interval is 30 days except for removal of over seeded ryegrass from bermudagrass during Sprint transition, e.g., 14 days.
- **DO NOT** apply more than 0.6 oz. (0.027 lb. ai) per acre per year.
- **DO NOT** apply postemergence when rain is expected within the next hour.
- **DO NOT** allow this chemical to drift onto crops or sensitive ornamental plants.
- **DO NOT** apply this product using aerial application equipment.
- **DO NOT** apply this product through any type of irrigation system.
- **DO NOT** use on turfgrass species other than those listed above unless experience indicates turf yellowing does not occur or is acceptable.
- **DO NOT** apply to newly seeded, sprigged or sodded turfgrasses. Delay application to until turfgrass is at 100% cover and root system is developed beyond a 2-inch depth unless otherwise is noted on this label.
- **DO NOT** apply within 4 weeks of cutting or lifting of sod.
- To minimize drift to non-target plants, **DO NOT** spray if winds are above 10 mph, use large droplet size and pressure appropriate for type of nozzles used to produce medium to large droplet sizes.

Crop Rotation Restrictions

As this product is degraded by soil microbes, environmental conditions that decrease microbial activity must be considered when making rotational cropping decisions. These environmental conditions include less than the 10 year average precipitation, cold temperatures within and following the cropping season, as well as soils with both low Organic Matter (OM) and high pH. If these conditions exist, or for crops not listed on CROP ROTATION RESTRICTIONS for the states listed in the three Tables below a soil bioassay may be necessary to ensure rotational crop safety. Previous herbicide history must be known prior to planting the crops listed below. Long-residual ALS inhibitors can remain for several years after application and increase the chance of rotational crop injury.

Field Bioassay

To conduct an effective field bioassay, plant strips of the crop you plan to grow the following season in fields previously treated with this product. Crop response will determine if the crop(s) planted in the test strips can be adequately grown in these areas.

*CROP ROTATION RESTRICTIONS
for the states of North Dakota, Minnesota, Montana and South Dakota*

Crops	Interval for soils with a pH < 8	Intervals for soils with a pH at or > 8
Spring and Winter Wheat	0 days	0 days
Durum Wheat	4 months	4 months
Sunflower	4 months	4 months
STS Soybeans	6 months	6 months

Grain Sorghum	9 months	15 months	18 months
Millet or forage sorghum	9 months	15 months	24 months

STORAGE AND DISPOSAL

DO NOT contaminate water, food or feed by storage or disposal.

PESTICIDE STORAGE: Store in a dry and secure location.

PESTICIDE DISPOSAL: Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture or rinsate is a violation of Federal law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

[Plastic bottle packaging:]

CONTAINER HANDLING: Nonrefillable container. **DO NOT** reuse or refill this container. Triple rinse or pressure rinse container (or equivalent) promptly after emptying. **Triple rinse as follows:** Empty the remaining contents into

application equipment or a mix tank. Fill the container ¼ full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. **Pressure rinse as follows:** Empty the remaining contents into application equipment or a mix tank. Hold container upside down over application equipment or mix tank or collect rinsate for later use or disposal. Insert pressure rinsing nozzle in the side of the container, and rinse at about 40 PSI for at least 30 seconds. Drain for 10 seconds after the flow begins to drip.

Once triple rinsed, recycle if available. Some agricultural pesticide containers can be taken to a container collection site or pick up for recycling. To find the nearest site, contact your chemical dealer or manufacturer. If recycling is not available, dispose of in a sanitary landfill or by incineration if allowed by state and local ordinances.

[Fiber Drums with Liners:]

CONTAINER HANDLING: Nonrefillable container. **DO NOT** reuse or refill this container. Completely empty liner by shaking and tapping sides and bottom to loosen clinging particles. Empty residue into the handling or application equipment. Then offer for recycling if available, or dispose of liner in a sanitary landfill, or by incineration, or by burning, if allowed by state and local authorities. If burned, stay out of smoke. If drum is contaminated and cannot be reused, dispose of it in the manner required for its liner.

WARRANTY DISCLAIMER AND NOTICE

IMPORTANT: READ BEFORE USE

Read the entire Directions for Use, Conditions, Disclaimer of Warranties and Limitations of Liability before using this product. If terms are not acceptable, return the unopened product container at once.

By using this product, user or buyer accepts the following Conditions, Disclaimer of Warranties and Limitations of Liability.

CONDITIONS: The directions for use of this product are believed to be adequate and must be followed carefully. However, it is impossible to eliminate all risks associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as weather conditions, presence of other materials, or the manner of use or application, all of which are beyond the control of Aceto Life Sciences, LLC. To the extent consistent with applicable law, all such risks shall be assumed by the user or buyer.

DISCLAIMER OF WARRANTIES: To the extent consistent with applicable law, ACETO LIFE SCIENCES, LLC MAKES NO OTHER WARRANTIES, EXPRESS OR IMPLIED, OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE OR OTHERWISE, THAT EXTEND BEYOND THE STATEMENTS MADE ON THIS LABEL. No agent of Aceto Life Sciences, LLC is authorized to make any warranties beyond those contained herein or to modify the warranties contained herein. To the extent consistent with applicable law, ACETO LIFE SCIENCES, LLC DISCLAIMS ANY LIABILITY WHATSOEVER FOR SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT.

LIMITATIONS OF LIABILITY: To the extent consistent with applicable law, THE EXCLUSIVE REMEDY OF THE USER OR BUYER FOR ANY AND ALL LOSSES, INJURIES OR DAMAGES RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT, WHETHER IN CONTRACT, WARRANTY, TORT, NEGLIGENCE, STRICT LIABILITY OR OTHERWISE, SHALL NOT EXCEED THE PURCHASE PRICE PAID, OR AT ACETO LIFE SCIENCES, LLC'S ELECTION, THE REPLACEMENT OF PRODUCT.

All trademarks are the property of their respective owners.

Table with 2 columns: IF IN EYES, IF ON SKIN OR CLOTHING and First Aid instructions. Includes a Note to Physician at the bottom.

FOR MEDICAL EMERGENCIES INVOLVING THIS PRODUCT, CALL CHEMTREC® TOLL FREE 1-800-424-9300 or 1-703-527-3887 (24 hours per day, 7 days per week).

FOR CHEMICAL SPILL, LEAK, FIRE, EXPOSURE OR MEDICAL EMERGENCY INVOLVING THIS PRODUCT CALL CHEMTREC® TOLL FREE 1-800-424-9300 or 1-703-527-3887 (24 hours per day, 7 days per week).

PRECAUTIONARY STATEMENTS

Hazards to Humans and Domestic Animals

CAUTION: Cause moderate eye irritation. Harmful if absorbed through skin. Avoid contact with skin, eyes or clothing. Wear appropriate protective eyewear. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet. Remove and wash contaminated clothing before reuse.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Applicators and other handlers must wear:

- Long-sleeved shirt and long pants,
- Chemical-resistant gloves made of water-proof material,
- Shoes plus socks,

USER SAFETY REQUIREMENTS:

Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

ENGINEERING CONTROL STATEMENTS:

When handlers use closed systems, or enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240 (d) (4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

USER SAFETY RECOMMENDATIONS:

Users should:

- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.
- Remove clothing /PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.

ENVIRONMENTAL HAZARDS

DO NOT apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. **DO NOT** apply when weather conditions favor drift from areas treated. **DO NOT** contaminate water when disposing of equipment washwaters or rinsate.

NON-TARGET ORGANISM ADVISORY:

This product is toxic to plants and may adversely impact the forage and habitat of non-target organisms, including pollinators, in areas adjacent to the treated area. Protect the forage and habitat of non-target organisms by following label directions intended to minimizing spray drift.

GROUND WATER ADVISORY:

This chemical has properties and characteristics associated with chemicals detected in ground water. This chemical may leach into groundwater if used in areas where soils are permeable, particularly where the water table is shallow.

SURFACE WATER ADVISORY:

This product may impact surface water quality due to runoff of rain water. This is especially true for poorly draining soils and soils with shallow ground water. This product is classified as having high potential for reaching surface water via runoff for several months or more after application.

A level, well-maintained vegetative buffer strip between areas to which this product is applied and surface water features such as ponds, streams, and springs will reduce the potential loading of Flucarbazone-sodium from runoff water and sediment. Runoff of this product will be reduced by avoiding applications when rainfall or irrigation is expected to occur within 48 hours.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in any manner inconsistent with its labeling.

READ ENTIRE LABEL. USE STRICTLY IN ACCORDANCE WITH PRECAUTIONARY STATEMENTS, RESTRICTIONS AND DIRECTIONS, AND WITH APPLICABLE STATE AND FEDERAL REGULATIONS.

This product can only be used in accordance with the Directions for Use on this label.

DO NOT apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forest, nurseries and green houses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on the label about personal protective equipment (PPE), restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

DO NOT enter or allow worker entry into treated areas during this restricted entry interval (REI) of 12 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, including plants, soil or water, is:

- Coveralls
- Shoes plus socks
- Chemical-resistant gloves, made of waterproof materials.

NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses.

Keep children and pets out of treated area until spray solution has dried.

Product Information

This product is a selective systemic pre- and post-emergent herbicide for the control of various annual grasses including wild oat, green foxtail, Italian ryegrass, windgrass, cheat, barnyardgrass, Japanese brome and broad leaf weeds including redroot pigweed, wild mustard and shepherd's purse, in spring, durum and winter wheat and turf areas. This product also suppresses additional grass and broadleaf weeds, including yellow foxtail, downy brome, and wild buckwheat.

This product is absorbed by foliage and roots of susceptible weeds, which cease growth soon after application. Weed emergence is not necessary for control due to the soil residual activity provided by this product. However, maximum weed control may not be seen for one to two weeks, though susceptible weeds will stop growing and will no longer be competitive. For broader spectrum activity, this product may be tank mixed with a broadleaf herbicide listed on this label. See TANK MIXES section for recommended products.

The mode of action for sulfonylamino-carbonyl-triazoline herbicides is the inhibition of branched chain amino acid biosynthesis in susceptible plants by binding to the acetolactate synthase (ALS) enzyme

Weed Resistance Management

For resistance management, AG35620-B R334.2 70 WDG Herbicide is a Group 2 herbicide. Any weed population may contain or develop plants naturally resistant to AG35620-B R334.2 70 WDG Herbicide and other Group 2 herbicides. The resistant biotypes may dominate the weed population if these herbicides are used repeatedly in the same field. Appropriate resistance management strategies must be followed.

To delay herbicide resistance, take one or more of the following steps:

Rotate the use of AG35620-b R334.2 70 WDG Herbicide or other Group 2 herbicides within a growing season sequence or among growing seasons with different herbicide groups that control the same weeds in a field.

Use tank mixtures with herbicides from a different group if such use is permitted; where information on resistance in target weed species is available, use the less resistance-prone partner at a rate that will control the target weed(s) equally as well as the more resistance-prone partner. Consult your local extension service or certified crop advisor if you are unsure as to which active ingredient is currently less prone to resistance.

Adopt an integrated weed-management program for herbicide use that includes scouting and uses historical information related to herbicide use and crop rotation, and that considers tillage (or other mechanical control methods), cultural (e.g., higher crop seeding rates; precision fertilizer application method and timing to favor the crop and not the weeds), biological (weed-competitive crops or varieties) and other management practices.

Users must scout before and after herbicide application to monitor weed populations for early signs of resistance development. Indicators of possible herbicide resistance include: (1) failure to control a weed species normally controlled by the herbicide at the dose applied, especially if control is achieved on adjacent weeds; (2) a spreading patch of non-controlled plants of a particular weed species; (3) surviving plants mixed with controlled individuals of the same species. If resistance is suspected, prevent weed seed production in the affected area by an alternative herbicide from a different group or by a mechanical method including hoeing or tillage. Prevent movement of resistant weed seeds to other fields by cleaning harvesting and tillage equipment when moving between fields, and planting clean seed.

If a weed pest population continues to progress after treatment with this product, discontinue use of this product, and switch to another management strategy or herbicide with a different mode of action, if available.

Contact your local extension specialist or certified crop advisors for additional pesticide resistance-management and/or integrated weed-management recommendations for specific crops and weed biotypes.

For further information or to report lack of performance or suspected resistance, contact your Aceto Life Sciences, LLC representative at (516) 627-6000 or Aceto@aceto.com.

MIXING INSTRUCTIONS

This product is a water dispersible granule designed to be diluted with water at the rates listed in the specific crop use directions. Fill the spray tank with approximately ½ of the desired volume with water or carrier. With the agitation operating, add the specified amount of the formulation as listed in the targeted crop use directions. Complete the filling process while maintaining agitation. Remove the hose from the mixing tank immediately after filling to avoid siphoning back into the carrier source. Add nonionic surfactant and other spray additives as the last ingredients in the tank. Allow time to fully disperse.

Since this product forms a suspension in water, it is important to maintain good agitation during mixing and spraying. If the spray suspension is allowed to settle for a short period of time, be sure to agitate the spray suspension for a minimum 10 minutes. Apply spray suspensions within 24 hours after mixing.

Spray Equipment Cleanout

The mix tank and spray equipment cleanout are an important stewardship activity to avoid injury to desirable crops. It is important to clean all mixing and spraying equipment immediately after use and before using pesticide products including this product.

To clean the spraying equipment, follow the procedure outlined below:

- Completely drain the mix tank and/or sprayer, and then wash thoroughly the tank, sprayer, boom and nozzles with clean water. Drain the system again.
- Fill the mixing or spray tank half full with clean water and add domestic ammonium, normally a 3% v/v solution, at a dilution rate of 1% v/v ammonium or 1 gallon per 100 gallons of rinsate.
- Completely fill the tank(s) with additional clean water. Agitate and recirculate and flush out the boom and hoses. Let the system run for 10 – 15 minutes. Drain the system completely.
- Remove nozzles and screens and dislodge any visible solid material. Then soak them in a 1% v/v ammonium solution. Inspect the nozzles and screen and remove any visual residues.
- Repeat the above procedure for a second time.
- Flush the mix tank and/or sprayer, boom and hoses with clean water. Drain the system again and inspect for any visible residues. If present, repeat the cleaning cycle again.
- If the rinsate cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

TANK MIX PARTNERS

For broader spectrum control of broadleaf weeds, this product may be mixed with the broadleaf herbicides listed in the following table. Depending on the tank mix partner, an adjuvant may be included in the spray solution. See *ADJUVANT USE RATES* section.

It is the pesticide user's responsibility to ensure that all products in the listed mixtures are registered for the intended use. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

If this product is to be tank mixed with other herbicides, conduct a compatibility test prior to mixing. Use a small container and mix all components in a small amount, usually 0.5 to 1 quart of spray. Combine all products in the same ratio and order of addition as in the proposed spray mixture. Observe the mixture for indication of incompatibility which usual occurs in 10 to 30 minutes after mixing. If incompatibility is observed, try changing the order of addition of the components. The guideline on tank mixture partners is driven by formulation type. Start with wettable powders (WP's) including water soluble bags (WSB's), water dispersible granules (WDG's), suspension concentrated (SC's) or flowable (F's), all with very good agitation. Next follow with water miscible concentrates and emulsifiable concentrates (EC's) before adding drift control additives, nonionic surfactants (NIS's). After vigorous agitation, there must be a homogeneous suspension. Let the final tank mixture stand and observe for any rapid settling or floating of components. If any indications of physical incompatibility develop, **DO NOT** use this mixture for spraying.

GROUND APPLICATION

Apply in a spray volume of 5 to 10 gal/A (or 50 to 100 liters/hectare) at 30 to 50 psi to ensure proper weed coverage. Flat fan nozzles of 80 or 110 degrees are advised for optimum coverage. **DO NOT** use floodjet or control droplet application equipment. Nozzles may be oriented 45 degrees forward to enhance crop penetration and to give better weed coverage.

MANDATORY SPRAY DRIFT

Ground Boom Applications:

- Apply with the nozzle height specified by the manufacturer, but no more than 3 feet above the ground or crop canopy unless making a turf, pasture, or rangeland application, in which case applicators may apply with a nozzle height no more than 4 feet above the ground.
- For applications prior to the emergence of crops and target weeds, applicators are required to use a coarse or coarser droplet size (ASABE S572.1).
- For all other applications, applicators are required to use a medium or coarser droplet size (ASABE S572.1).
- **DO NOT** apply when wind speeds exceed 15 miles per hour at the application site.
- **DO NOT** apply during temperature inversions.

Boom-less Ground Applications:

- Applicators are required to use a Medium or coarser droplet size (ASABE S572.1) for all applications.
- **DO NOT** apply when wind speeds exceed 15 miles per hour at the application site.
- **DO NOT** apply during temperature inversions.

SPRAY DRIFT ADVISORIES

THE APPLICATOR IS RESPONSIBLE FOR AVOIDING OFF-SITE SPRAY DRIFT.
BE AWARE OF NEARBY NON-TARGET SITES AND ENVIRONMENTAL CONDITIONS.

IMPORTANCE OF DROPLET SIZE

An effective way to reduce spray drift is to apply large droplets. Use the largest droplets that provide target pest control. While applying larger droplets will reduce spray drift, the potential for drift will be greater if applications are made improperly or under unfavorable environmental conditions.

Controlling Droplet Size – Ground Boom

- Volume - Increasing the spray volume so that larger droplets are produced will reduce spray drift. Use the highest practical spray volume for the application. If a greater spray volume is needed, consider using a nozzle with a higher flow rate.
- Pressure - Use the lowest spray pressure specified for the nozzle to produce the target spray volume and droplet size.
- Spray Nozzle - Use a spray nozzle that is designed for the intended application. Consider using nozzles designed to reduce drift.

BOOM HEIGHT – Ground Boom

- Use the lowest boom height that is compatible with the spray nozzles that will provide uniform coverage. For ground equipment, the boom must remain level with the crop and have minimal bounce.

SHIELDED SPRAYERS

Shielding the boom or individual nozzles can reduce spray drift. Consider using shielded sprayers. Verify that the shields are not interfering with the uniform deposition of the spray on the target area.

TEMPERATURE AND HUMIDITY

When making applications in hot and dry conditions, use larger droplets to reduce effects of evaporation.

TEMPERATURE INVERSIONS

Drift potential is high during a temperature inversion. Temperature inversions are characterized by increasing temperature with altitude and are common on nights with limited cloud cover and light to no wind. The presence of an inversion can be indicated by ground fog or by the movement of smoke from a ground source or an aircraft smoke generator. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing. Avoid applications during temperature inversions.

WIND

Drift potential generally increases with wind speed. **AVOID APPLICATIONS DURING GUSTY WIND CONDITIONS.** Applicators need to be familiar with local wind patterns and terrain that could affect spray drift.

Boom-less Ground applications:

- Setting nozzles at the lowest effective height will help to reduce the potential for spray drift.

Handheld Technology Applications:

- Take precautions to minimize spray drift.

ENDANGERED SPECIES PROTECTION

To avoid adverse effects on endangered dicot plant species, the following measures will be required where endangered plant species occur in the counties listed in the table below:

State	County
Idaho	Idaho, Lewis, and Nez Perce
Minnesota	Brown, Cottonwood, Goodhue, Jackson, and Renville
Montana	Flathead, and Lake
Oregon	Benton, Clackamas, Lane, Linn, Marion, Polk, Union, Wallowa, Washington, and Yamhill
Washington	Asotin, Chelan, Cowlitz, Lewis, Lincoln, Spokane, and Whitman
Wyoming	Laramie

For ground applications, the applicator must:

- Apply when there is sustained wind away from native plant communities, OR
- Use low-pressure nozzles according to manufacturer’s specifications that produce only coarse or very coarser (ASABE S572-1) droplets, OR
- Leave a 50 foot untreated buffer between the treatment and native plant communities

Spray Equipment Cleanout

The mix tank and spray equipment cleanout are an important stewardship activity to avoid injury to desirable crops. It is important to clean all mixing and spraying equipment immediately after use and before using pesticide products including this product.

To clean the spraying equipment, follow the procedure outlined below:

- Completely drain the mix tank and/or sprayer, and then wash thoroughly the tank, sprayer, boom and nozzles with clean water. Drain the system again.
- Fill the mixing or spray tank half full with clean water and add domestic ammonium, normally a 3% v/v solution, at a dilution rate of 1% v/v ammonium or 1 gallon per 100 gallons of rinsate.
- Completely fill the tank(s) with additional clean water. Agitate and recirculate and flush out the boom and hoses. Let the system run for 10 – 15 minutes. Drain the system completely.
- Remove nozzles and screens and dislodge any visible solid material. Then soak them in a 1% v/v ammonium solution. Inspect the nozzles and screen and remove any visual residues.
- Repeat the above procedure for a second time.
- Flush the mix tank and/or sprayer, boom and hoses with clean water. Drain the system again and inspect for any visible residues. If present, repeat the cleaning cycle again.
- If the rinsate cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

USE DIRECTIONS FOR TURF

This product is a selective, post emergence herbicide for control and suppression of numerous grassy and broadleaf weeds. See the list below for the weeds controlled or suppressed. This product is absorbed by foliage and roots of susceptible weeds, which cease growth soon after application. However maximum weed control may not be seen for one to three weeks, though susceptible weeds will stop growing and will no longer be competitive. For broader spectrum activity, this product may be tank mixed with other labeled turfgrass herbicides.

This product is an acetolactate synthase (ALS) inhibitor, and will control weed biotypes which have developed target site resistance to certain classes of herbicides, including ACCase inhibitors, dinitroanilines and triallates. See “RESISTANCE MANAGEMENT” section for additional information.

Turfgrass Tolerance:

This product may be used on seeded, sodded, or sprigged turf. The use of this product on turf that is not well established, that has been weakened by weather, pests, diseases, chemicals, mechanical or other related stresses, may result in severe turf injury.

When applied as directed under the conditions described, the following established turfgrasses are tolerant to this product. Note that higher rates and higher temperatures may cause more yellowing than other conditions. Temporary yellowing of the turf may occur after application. This effect is temporary and the turf will recover in a few days while the weeds continue to decline.

The following turfgrass species have been determined to be tolerant to applications of this product. For use on other turfgrass species, spray a small area of the turf and observe it for two weeks to determine turf safety before spraying large areas.

Cool-Season Grasses	
Bentgrass, Creeping	<i>Agrostis palustris</i>
Bluegrass, Annual	<i>Poa annua</i>
Bluegrass, Kentucky	<i>Poa pratensis</i>
Fescue, Fine	<i>Festuca rubra</i>
Fescue, Tall	<i>Festuca arundinacea</i>
Warm-Season Grasses	
Bahia grass	<i>Paspalum notatum</i>
Bermuda grass	<i>Cynodon dactylon</i>
Buffalo grass	<i>Buchloe dactyloides</i>
Centepede grass	<i>Eremochloa ophiuroides</i>
St. Augustine grass	<i>Stenotaphrum secundatum</i>
Zoysia grass	<i>Zoysia japonica</i>
Seashore paspalum	<i>Paspalum vaginatum</i>

PRECAUTIONS FOR TURF:

- Use on golf course greens and tees is the sole responsibility of the end user and Aceto Life Science, LLC does not recommend or accept any liability for turf injury on these sites.
- Use on turf species other than what are listed on the label is the sole responsibility of the end user and Aceto Life Science, LLC does not recommend or accept any liability for turf injury on these sites.
- Avoid applications when turfgrasses are under stress as injury may result.
- Applications must be made to actively-growing weeds.
- Allow at least one week between last application and overseeding with winter grasses for winter cover.

Turfgrass Sites

This product can be used on turfgrass growing on golf course fairways and roughs, seed and sod production fields, commercial and residential sites (including homes, schools, playgrounds, parks, recreational areas and sports fields, common areas).

APPLICATION

Apply this product only with ground equipment.

WEED RESISTANCE MANAGEMENT

This product is an acetolactate synthase (ALS) inhibiting herbicide. Any weed population may contain or develop plants naturally resistant to a herbicidal mode of action. Resistant biotypes may eventually dominate the weed population if herbicides with an identical mode of action are used repeatedly in the same field and weed control will fail. Where possible, rotate the use of this product with herbicides that have a different mode of action.

Other resistance mechanisms that are not linked to site of action, but specific for individual chemicals, including enhanced metabolism, may also exist. Consult with your chemical dealer, consultant, Extension Turfgrass Specialist or agricultural advisor for resistance management strategies for your area.

MIXING INSTRUCTIONS

1. Ensure the spray tank is clean. In-line strainers and nozzle screens must be clean and 50 mesh or coarser.
2. Fill the spray tank 1/4 to 1/2 full with clean water and begin agitation or bypass.
3. Add the appropriate rate of this product directly to the spray tank.
4. Add the other herbicides if desired
5. Add the surfactant.
6. Add micronutrients (if needed).
7. Fill the spray tank to the required level.
8. Maintain sufficient agitation during both mixing and application of this product.

Ground Broadcast and Spot Treatment

Accurately calibrate the sprayer prior to mixing the herbicide treatments. Apply this product and the labeled tank mix partners in a minimum of 20 gal of total spray volume per acre using broadcast boom equipment or hand held single nozzle equipment. Application must be made at a sufficient spray pressure and volume to provide accurate and uniform application of spray particles to a given area without causing spray drift to non- target areas. If mixed with other labeled herbicides, the spray volume may be no less than the minimum volume specified by any tank mix product used or 20 gal, whichever is greater. Use appropriately sized mesh screens and in-line strainers. Flat fan nozzles of 80 or 110 degrees are specified for optimum coverage. Agitate thoroughly before and during application with either bypass or mechanical agitation. Rinse the sprayer thoroughly with clean water immediately after each use.

SPRAYER CLEAN-UP

Clean sprayer using the following procedures:

1. Drain the tank and thoroughly rinse spray tank, boom and hoses with clean water especially all visible deposits.
2. Fill the tank with water and add household ammonia to make a 1% v/v solution (1 gal/100 gal). Flush the hoses, boom and nozzles with the cleaning solution. Circulate for at least 15 minutes. Flush hoses, boom and nozzles once more and then drain the tank.
3. Clean nozzles and screens in a separate container using the 1% v/v solution of ammonia and water.
4. Repeat step 2.
5. Rinse tank and flush boom and hoses with clean water.
6. **DO NOT** clean sprayer near desirable vegetation, wells or other water sources:
7. Dispose of all rinsate in accordance with pertinent regulations.
8. Check tank mix partner label for any additional clean-up procedures.

APPLICATION METHODS

Apply this product as a postemergence application to actively-growing broadleaf and grass weeds that are in the seedling growth stage. Large mature weeds will not be effectively controlled with this product. A nonionic surfactant with at least 80% active ingredients must be added at 0.25% v/v (2.0 pts/100gal of spray mix) to the spray mix.

DO NOT apply when environmental conditions favor drift to non-target areas.

For broader spectrum control of weeds and/or to provide extended pre-emergence weed control, this product may be mixed with other herbicides labeled for turf. with all tank mix partners, read and follow the use directions, rates, precautions, timing, restrictions and recommendations on the other herbicide and surfactant labels. The tank mix must be used in accordance with the more restrictive label limitations and precautions for all pesticides used.

WEEDS CONTROLLED or SUPPRESSED*	
<i>Grasses</i>	<i>Broadleaf Weeds</i>

	Wild mustard (<i>Brassica kaber</i>)
	White clover (<i>Trifolium repens</i>)*

Cool-season and warm-season turfgrasses: This product at 0.3-0.6 oz. (0.013-0.027 lb. ai) product per acre may be applied to established labeled cool- and warm-season turfgrasses and to newly-established Kentucky bluegrass that has a minimum of 2 to 4 leaves.

DO NOT apply more than 0.6 oz. (0.027 lb. ai)/A/year.

Seedhead Suppression:

Bahiagrass: Apply this product at 0.2–0.6 oz. (0.009-0.027 lb. ai)/A after full spring transition (green-up) to suppress bahiagrass seedhead emergence. Application must be made before seedheads emerge, or 1 to 3 days after mowing. Tank mix other labeled grass herbicides with this product in order to increase the number of weed species controlled. Repeat applications may be made so long as no more than 0.6 oz. (0.027 lb. ai)/A are made per year.

Annual Bluegrass and Other Grasses: Apply this product at 0.2–0.6 oz. (0.009-0.027 lb. ai)/A before seed heads emerge in the spring. Application must be made before seedheads emerge. Repeat applications may be made so long as no more than 0.6 oz. (0.027 lb. ai)/A are made per year.

Growth Management in Turfgrass

This product will aid in control of excessive growth of selected turfgrasses and increase turf quality. Apply at 0.3–0.6 oz. (0.013-0.027 lb. ai)/A. Repeat applications may be made so long as no more than 0.6 oz. (0.027 lb. ai)/A are made per year. Make subsequent applications at 30 to 60 day intervals.

Removal of over seeded perennial ryegrass from bermudagrass during Spring Transition

Use this product at rates of 0.3-0.6 oz. (0.013-0.027 lb. ai)/A in the spring to aid in the transition to bermudagrass. The lower rate will allow for a more gradual transition from perennial ryegrass to bermudagrass. A second low rate application may be made 14 to 21 days after the first application. Alternatively, apply 0.6 oz. (0.027 lb. ai) per acre to allow for quicker transition. This product may be less aggressive than other herbicides which allows for a more gradual transition to bermudagrass. Make sure there is a good bermudagrass base before applying this product.

Use of This Product as a Herbicide Safener:

This product will decrease bleaching due to carotenoid biosynthesis inhibitor herbicide (mesotrione) applications in bermuda grass, zoysia grass and St. Augustine grass and other grasses. This product may not totally prevent injury due to carotenoid biosynthesis inhibitors. However, injury from this tank mix is less than when carotenoid biosynthesis inhibitors are applied alone. Users are advised to determine turfgrass tolerance to mesotrione + this product tank mixes at their site. A small treated area must be observed for 2 weeks after application. If injury does not occur or is considered acceptable, then the remaining turfgrass area may be sprayed. The level of weed control normally achieved with these two herbicides is not adversely affected when combined in a tank mix.

Weed Control in Conifers in Nurseries and Field Plantings (including Christmas trees)

This product can be used over-the-top or as a directed spray under the canopy in conifer nurseries and field plantings (including Christmas trees). Apply this product at 0.3–0.6 oz. (0.013-0.027 lb. ai)/A to actively growing weeds listed above. **DO NOT** apply more than 0.6 oz. (0.027 lb. ai)/A/yr.

RESTRICTIONS FOR TURF AND CONIFERS:

- **DO NOT** apply more than 0.6 oz. (0.027 lb. ai) per acre per application.
- **DO NOT** make more than two applications per year.
- The minimum retreated interval is 30 days except for removal of over seeded ryegrass from bermudagrass during Sprint transition, e.g., 14 days.
- **DO NOT** apply more than 0.6 oz. (0.027 lb. ai) per acre per year.
- **DO NOT** apply postemergence when rain is expected within the next hour.
- **DO NOT** allow this chemical to drift onto crops or sensitive ornamental plants.
- **DO NOT** apply this product using aerial application equipment.
- **DO NOT** apply this product through any type of irrigation system.
- **DO NOT** use on turfgrass species other than those listed above unless experience indicates turf yellowing does not occur or is acceptable.
- **DO NOT** apply to newly seeded, sprigged or sodded turfgrasses. Delay application to until turfgrass is at 100% cover and root system is developed beyond a 2-inch depth unless otherwise is noted on this label.
- **DO NOT** apply within 4 weeks of cutting or lifting of sod.
- To minimize drift to non-target plants, **DO NOT** spray if winds are above 10 mph, use large droplet size and pressure appropriate for type of nozzles used to produce medium to large droplet sizes.

FLUCARBAZONE-SODIUM	GROUP	2	HERBICIDE
---------------------	-------	----------	-----------

AG35620-b R334.2 70 WDG HERBICIDE

[For burndown and early season residual control and postemergence control of wild oat, green foxtail and other listed grass and broadleaf weeds in Spring and Winter wheat.]

[For selective control of listed weeds in turf on golf courses, sod farms, residential and commercial turf sites, park and recreation areas, school grounds and other turf areas, in conifer nurseries and field plantings and for seed head and growth management in turf.]

ACTIVE INGREDIENT:	% BY WT.
Flucarbazone-sodium.....	70%
OTHER INGREDIENTS:.....	30%
TOTAL	100%

See inside booklet for additional Precautionary Statements and Directions for Use.

Read "LIMIT OF WARRANTY AND LIABILITY" before buying or using. If terms are not acceptable, return at once unopened.

First Aid	
IF IN EYES	<ul style="list-style-type: none">• Hold eye open and rinse slowly and gently with water for 15-20 minutes.• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eyes.• Call a poison control center or doctor for treatment advice.
IF ON SKIN OR CLOTHING	<ul style="list-style-type: none">• Take off contaminated clothing.• Rinse skin immediately with plenty of water for 15 to 20 minutes.• Call a poison control center or doctor for treatment advice.
Note to Physician: No specific antidote is available. Treat the patient symptomatically. Have the product container or label with you when calling a poison control center or physician, or going for treatment. FOR MEDICAL EMERGENCIES INVOLVING THIS PRODUCT, CALL CHEMTREC® TOLL FREE 1-800-424-9300 or 1-703-527-3887 (24 hours per day, 7 days per week).	

FOR CHEMICAL SPILL, LEAK, FIRE, EXPOSURE OR MEDICAL EMERGENCY INVOLVING THIS PRODUCT
CALL CHEMTREC® TOLL FREE 1-800-424-9300 or 1-703-527-3887 (24 hours per day, 7 days per week).

PRECAUTIONARY STATEMENTS

Hazards to Humans and Domestic Animals

CAUTION: Cause moderate eye irritation. Harmful if absorbed through skin. Avoid contact with skin, eyes or clothing. Wear appropriate protective eyewear. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet. Remove and wash contaminated clothing before reuse.

ENVIRONMENTAL HAZARDS

DO NOT apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. **DO NOT** apply when weather conditions favor drift from areas treated. **DO NOT** contaminate water when disposing of equipment washwaters or rinsate.

STORAGE AND DISPOSAL

DO NOT contaminate water, food or feed by storage or disposal.

PESTICIDE STORAGE: Store in a dry and secure location.

PESTICIDE DISPOSAL: Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture or rinsate is a violation of Federal law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

[Plastic bottle packaging:]

CONTAINER HANDLING: Nonrefillable container. **DO NOT** reuse or refill this container. Triple rinse or pressure rinse container (or equivalent) promptly after emptying. **Triple rinse as follows:** Empty the remaining contents into application equipment or a mix tank. Fill the container ¼ full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. **Pressure rinse as follows:** Empty the remaining contents into application equipment or a mix tank. Hold container upside down over application equipment or mix tank or collect rinsate for later use or disposal. Insert pressure rinsing nozzle in the side of the container, and rinse at about 40 PSI for at least 30 seconds. Drain for 10 seconds after the flow begins to drip.

Once triple rinsed, recycle if available. Some agricultural pesticide containers can be taken to a container collection site or pick up for recycling. To find the nearest site, contact your chemical dealer or manufacturer. If recycling is not available, dispose of in a sanitary landfill or by incineration if allowed by state and local ordinances.

[Fiber Drums with Liners:]

CONTAINER HANDLING: Nonrefillable container. **DO NOT** reuse or refill this container. Completely empty liner by shaking and tapping sides and bottom to loosen clinging particles. Empty residue into the handling or application equipment. Then offer for recycling if available, or dispose of liner in a sanitary landfill, or by incineration, or by burning, if allowed by state and local authorities. If burned, stay out of smoke. If drum is contaminated and cannot be reused, dispose of it in the manner required for its liner.
