**DIRECTIONS FOR USE**  
It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

**THIS PRODUCT SHOULD NOT BE USED ON ITEMS WHICH COME INTO CONTACT WITH FOODSTUFF NOR ITEMS OF CLOTHING OR INFANT WEAR.**

In cotton, spun rayon or polyester fabrics or blends thereof, a level of 2 - 5% max Durotex (2 - 5 lbs/100 lbs of compound) will afford excellent protection against attack by surface growing bacterial and fungal organisms. The higher level of protection is recommended for use in fabrics which will be subjected to weathering. For such applications, the use of a water repellent or resin binder is recommended. Many commercial water repellent formulations, as well as binders such as PVA or acrylics, are compatible with the Durotex compounds, and will greatly aid in the creation of a more durable system.

For mattress ticking fabrics, a level of 2 - 3% max (2 - 3 lbs/100 lbs compound) based on the finished weight of the fabric is recommended. A resin binder such as PVA or acrylic cleared for textile use by the FDA should be employed.

For the protection of adhesives (non-food grade) and latex emulsions a level of 0.75 - 2% max (0.75 - 2 lbs/100 lbs compound) is sufficient to protect the product against bacterial or fungal deterioration.
