DIRECTIONS FOR USING

LYSTADS RAT and MOUSE KILLER

FOR RATS:

Place 4 or more tablespoonsful of prepared bait in shallow pans or bait boxes. Make sure these bait boxes are located in places frequented by rats, preferably near their feeding places. Baits should be placed in location not accessible to children, pets, and domestic animals, or in tamper-proof bait boxes. Be sure to replace bait as it is used until there is no longer any feeding in these locations. This may range from 5 to 15 days. It is essential that you have a continuous uninterrupted feeding in order to obtain control.

FOR MICE:

The same general directions prevail for mice as for rats. However, it will be necessary to put out more feeding stations for mice because they do not travel for feed as far as rats do. Use only 1 teaspoonful in each feeding station. Do not place these feeding stations more than 12 feet apart.

CAUTION

This product contains an anticoagulant material as its active ingredient which, if taken continuously by humans or animals, will produce internal hemorrhaging. Baits should be placed in locations not accessible to children, pets, and domestic animals, or in tamper-proof bait boxes.

Should bait be taken, give patient one tablespoon of salt in a glass of warm water as an emetic. Continue this until vomit fluid is clear. CALL PHYSICIAN IMMEDIATELY.

NOTE FOR PHYSICIAN:

Where humans have ingested this material intravenous injections and oral doses of vitamin K combined with blood transfusions are advisable.

NON WARRANTY:

Seller makes no warranty, expressed or implied, concerning the use of this product other than indicated on the label. Buyer assumes all risk of use and/or handling of this material when such use and/or handling is contrary to label instructions.
