RESTRICTED USE PESTICIDE

FOR RETAIL SALE TO AND USE BY CERTIFIED APPLICATORS OR PERSONS UNDER THEIR DIRECT SUPERVISION AND ONLY FOR THOSE USES COVERED BY THE CERTIFIED APPLICATIONS CERTIFICATION.

DIAZINON 4 SPRAY

ACCEPTED

OCT - 4 1993

Under the Federal Insecticide. Feagicide, and Rodenticlide Act. A Reg. No. 2935-368

This conduct must not be used on colf courses and sod farms.

Active Ingredient: O.O-Diethyl O-(2-leopropyl-8 4-pyrimidinyl) phosphorothiosse 48.04

100.0%

*Contains xylone range arom:

EM ER NA 2006 CA 1

EPA Reg. No. 2,35-388-AA

KEEP OUT OF REACH OF CHILDREN. CAUTION

See additional precautionar se inside booklet.

21/2 Gallons

U. S. Standard Measure

DIRECTIONS FOR USE AND CONDITIONS OF SALE AND WARRANTY

IMPORTANT: Read the entire Directions for Use and the Conditions of Sale and Warranty before using this product. If terms are not acceptable, return the unopened conduct container at once.

Conditions of Sale and Warranty

NOTICE: The statements made on this label are believed to be true and accurate, but because of conditions of use which are beyond our control, WILBUR-ELLIS COMPANY does not make, nor does it authorize any agent or representative to make, any warranty, guaranty or representation, expressed or implied, concerning this material or the use thereof, except in conformity with the statements on the label. Neither Wittbur-ELLIS COMPANY nor the seller shall be held responsible in any manner for any personal injury * , , * ...* or property damage or loss resulting to the buyer or to the other person from handling... storage or use of this material, not in accordance with directions. The buyer assumes all; risk and liability resulting from improper handling, storage or use and accepts and uses this material on these conditions.

DIRECTIONS FOR USE

It is a violation of federal lew to use this product in a marker inconsistent with its labeling.

FAILURE TO FOLLOW THE DIRECTIONS FOR USE AND PRECAUTIONS ON THIS LABEL MAY RESULT IN POOR INSECT CONTROL, CROP INJURY, OR ILLEGAL RESIDUES.

General Information

: District 4 Sery is an emulaifiable solution which, when diluted with water according to the directions, is intended for the control of ineact peers of agricultural crops and other plants. Do not use on tood crops grown in greenhouses. Do not use in barns or dwellings. Do not use on fivestock.

In the directions for use which follow, best control is obtained when application is made at first sign of peats. Application should be repeated only as directed to maintain control.

To a sid agray drift, do not apply under windy conditions. Avoid apray overlap, since crop or plant injury may result.

Work Selety Rules

REPEATED EXPOSURES TO CHOLINESTERASE INHIBITORS SUCH AS ARE CONTAINED IN THIS PRODUCT MAY, WITHOUT WARMING, CAUSE PROLONGED SUSCEPTIBILITY TO VERY SMALL DOSES OF ANY CHOLINESTERASE MANERADE.

When handling Diazinon 4 Spray do not rub eyes or mouth with hands. If you feel sick in any way, STOP work and get help right eway, See Practical Treatment section of this label. When sandling this product, wear the personal protective equipment listed in the following section.

PERSONAL PROTECTIVE EQUIPMENT

Long-eleaved shirt, long-legged pants, shoes and socia, and chemical-resistant gloves.

Do not apply this product in a way that will contact unprotected workers, either directly or through drift. Only protected handlers may be in the area during application.

Regntry Statement

Twenty-four hours must elepse between the time of application to vegetables, fruits, nuts and field crops and the time a worker enters or is allowed to enter the treated area, unless the person entering the treated area is wearing the personal protective equipment listed above. For fewns, ornementals, or noncrop areas, do not enter or allow entry into treated areas without personal protective equipment until aprays have dried.

Because certain states may require more restrictive reentry intervals for various crops treated with this product, consult your State Department of Agriculture for further information (See Note below.)

in vegetables, fruit trees, or field crops, written or onlivernings must be given to workers who are expected to be in a treated area or in an area about to be treated with this product. Oral varnings must inform workers of areas or fields that may not be entered without specific personal protective equipment for 24 hours after application, and appropriate actions to take in case of accidental exposure, as described under Statement of Prectical Treatment in the Processionary Statements on this label. When oral warnings are given, wentings after the process of a language customarily understood by workers. Oral warnings must be given if there is reason to believe that written warnings cannot be understood by workers. Written warnings must include the following information: WARNING. Area treated with Diszinon 4 Spray on (date of application). Do not enter without appropriate personal protective equipment for 24 hours after application, in case of accidental exposure, flush eyes or skin with plenty of water. Call physician if irritation persists. Rémove and wash contaminated clothing before reuse.

Note: The California Department of Agriculture has set a 5-day reentry period for diszinon on grapes, peaches, and nec-, tarines. Five days should elapse between the time of application and the time a worter may enter the field to engage in afly activity requiring substantial contact with treated foliage. When a mixture of two or more organophosphase pesticides are applied in combination, the Interval should be protonged by adding to the largest applicable interval an additional 50% of that interval.

CHEMICATION

APPLICATION THROUGH AN IRRIGATION SYSTEM (CHEMIGATION) — CRANBERRIES ONLY

Diszinon 4 Spray may be applied alone or in combination with other posticides registered for application strough sprinkler irrigation systems to cranberries. To insure compatibility, pour the products into a small container of water in the correct proportions. After thorough mixing, let stand for five minutes. If the combination remains mixed, or can be remixed readily, the mixture is compatible.

Do not apply this product through any type of irrigation system to other crops. For chemigation, apply this product to cranberries only through sprinkler irrigation systems. Do not apply this product to cranberries through any other type of irrigation system.

Crop Injury, lack of effectiveness, or illegal posticide residues in the crop can result from non-uniform distribution of treated water. If you have questions about calibration, you should contact State Extension Service specialists, equipment manufacturers or other experts.

Do not connect the irrigation system used for peeticide application to a public water system unless the pesticide labelprescribed safety devices for public water systems are in place. A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments, if the need arises.

Chemigation System Connected to Public Water Systems

- Public water system means a system for the provision to the public of piped water for human consumption if such system
 has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the
 year.
- 2. Chemigation systems connected to public water systems must contain a functional, reduced-pressure zone, backflid-ip preventer (RPZ) or the functional equivalent in the water supply line upstream from the point of pessicide introduction. As an option to the RPZ, the water from the public water system should be discharged into a reservoir tank prior to pessicide introduction. There shall be a complete physical break (air gap) between the outlet end of the fill pipe and it is 30.30.00 overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe.

Sprinkler Chemigation

- The system must contain a functional check valve, a vacuum relief valve, and low pressure drain approprietely located by the irrigation pipeline to prevent water source contamination from backflow.
- The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
- The preticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system intertock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shull down.
- The system must contain functional interlocking controls to automatically shut off the pessicide injection pump when the
 water pump motor stops.

- The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the
 water pressure decreases to the point where posticide distribution is adversely effected.
- Systems must use a metering pump, such as a positive displacement injection pump (e.g., displacem pump) effectively
 designed and constructed of meterials that are compatible with pesticides and capable of being fitted with a system interlock.
- 7. Do not apply when wind speed favors drift beyond the area intended for treatment.

Operating instructions

- 1. Determine the acreage to be treated by the sprintder system.
- 2. Measure the appropriate amount of Diazinon 4 Spray needed to treat the acreege to be treated. Refer to the specific directions for use for cramberries for the application rate and the amount of water per acre.
- 3. Add the pre-measured. Dissings 4 Servy to the chamigation system supply tank and dista with water if needed.

 Proper agitation is needed if: Dissings 4 Servy to the chamigation system supply tank and dista with water if needed. tion application to cranbenies.
- 4. Start the irrigation system and bring the system up to full pressure, making certain that all aprintier heads are functioning. properly.
- 5. Engage the chemigation injection or venturil system to add the diszinon to the irrigation lines.
- 6. Continue to run irrigation system for a few minutes after supply tank is empty to allow material in the irrigation lines to reach the aprintier heads furthest from the chemigation injection point.

Fruit and Nut Crops

Diazinon 4 Spray may be applied using ground or serial application equipment as specified in the following table. This table indicates the minimum amount of water that can be used for the various methods of application. The rate of Diazinon 4 Spray, for aerial apray or concentrated apray applied to fruit trees by ground equipment is based on a dilute full cover spray applied with conventional ground equipment at a rate of 300-400 gala, of water per acre. The specific amount of product to be used appears under the separate dir....tions for use for each crop, if the Plate calls for 1 pt. of Diazinon 4 Spray in 100 gale, of water, this amounts to 3-4 pts. of product per acre when applied at the usual dilute ground aprayvolut

of 300-400 gals, of water per acre. In no case should the amount of product used per acre exceed the maximum amount per acre per application that is specified in the Timing/Special Directions for individual crops.

Note: To protect bees, do not apply this product to fruit trees when trees or substantial numbers of weeds in the orchard are in bloom.

Сгор	Post	Rate	Timing/Special Directions
Almonds (CA only)	San Jose Scale, Parlatoria Scale	1-1½ pts. + 2-3 gals. dorment oil or 1-1½ gals. superior type oil in 100 gals. of water	Apply as a dorment spray. Do not apply more than 6 pts. of diazinon or 9 gals. of oil per acre.
Apricots	Aphide, Brown Mites (Clover Mites), Two-epotted Spider Mites, Olive Scale Crawlers, San Jose Scale Crawlers	1 pt. in 100 gals. of water	Apply as infestations occur. Repeat application after 14 days if necessary.
	Olive Scale Crawlers	V2 pt. +1V2 gals. of light medium horticultural oil per 100 gals. of water	Apply when scale crawlers are present.
	Apricot Meelybugs	1 pt. per 100 gats. of water	Apply as a cover apray from petal fall to June. Allow 14 days between applications.

Notes: (1) Do not apply more than 4 pts. of product per acre per application and no more than 12 pts. of product per acre per season. (2) To avoid Regal residues, allow a minimum of 21 days between the last application and hervest.

Caneberries (CA, OR and WA only) (Blackberries, Boysenberries, Can Careborries, Caneberry Careborries, Caneberries, Canebe	1 qt. per acre	Apply as insects occur. Repeat application after 14- days if necessary. Do not make more than 5 applications per season. Do not apply within 7 days of harvest or liegal residues may occur.	
Dowbernes, Locanberries.	Raspberry Fruitworms, Raspberry Sawflies		Apply in a minimum of 100 gals, of water per acre (200 gals, per acre maximum),
Respondes)			For Respiserry Fruitworms make one application when blossom bude separate. Make a second application immediately before blossoms open.
	Dryberrý Mites	1-2 qts. per acre	Apply as a doment spray in the early Spring when cases are still on the ground and buds are closed. Make a second application when buds are well developed but still closed.
]		Apply in a minimum of 100 gats, of water per acre. Do not apply withts 7 days of harvest or illegal residues may occur.
	Respherry Crown Borers (Respherry Root Borers)	2 qts. per acre	Apply a single application in a minimum of 100 gats, of water per acre as a drench to the crown and lowe canes in the Spring before bude break.
Cherries	Eyespotted Bud Moths, Fruit Tree Leafrollers	1 pt. in 100 gais, of water	Apply in cover eprays as infestations occur begining at peal fall. Repeat application after 7 days if necessary.
	Leethoppers	1 pt. in 100 gale. of water	Male 3-4 applications beginning at petal fall and continuing through the growing season as infestations occur. Allow 7 days between applications.
	Cherry Fruitflies	1/2-1 pt. in 100 gale. of week	Make 3-4 applications beginning when adult file) begin to emerge and repeating at 10 day intervals:
	Black Cherry Aphids	1 pt. in 100 gale. of water	Apply as a cover apray when aphide appear. Hebdal application after 10 days if necessary.
	San Jose Scale Crawlers	1 pt. in 100 gale. of water	Apply during the pre-pink stage or when crawlers first appear.
	Cherry Rust Mites	Vz-1 pt. in 100 gais, of water	Apply to trees as a single supplemental spray after hervest.

Notes: (1) Do not make more than 3 applications per season. (2) Do not apply more than 4 pss. of product per acre per application and no more than 12 pts. of product per acre per season. (3) Allow a minimum of 21 days between the last application and hervest.

^{** =} Dorment apray only.

			Do not apply within 14 days of harvest or illegal residues may occur.
			Note: Diszinon will not control organophosphate- resettant leafminers.

Field Crops

Soil and foliar applications of Dezinon 4 Spray should always be applied as a spray in sufficient water to ensure thorough coverage, For foliar applications, observe stated time intervals between last application and hervest, as well as intervals between applications and total number of applications that can be made per season.

Pre-Hervest interval (PHI") For Foliar Applications

Sugar Beets	Hopa	Crop
**	74	PHI (Days)

^{*}PHI = Pre-Harvest inserval or the number of days bety

Сгор	Post	Rate	Tuning/Special Directions
Норв	Aphids, Spider Mites	1 qt. per ecre	Apply as poets occur. Repeat application, as necessary, every 14 days. Do not make more than 4 applications per season.
•	ł	1	Do not apply within 14 days of harvest.
Sugar Beets	Wirewarms	3-4 qts. per acre	Broadcast just before planting, incorporate into soil 4-6 inches.
			Do not apply more than 4 qts, of this product to the soil, per tesson.
	Best Leathoppers, Dipterous Leatminers, Aphids	76-1 pt per acre	Apply as insects occur. Repeat application, as necessary, every 7 days. Do not make more than 5 applications per season.
		1	Do not apply within 14 days of hervest.
			Note: Diazinon will not control organophosphale- resistant leakminers.
	Gresshoppers	1 pt. per acre	Apply as insects occur. Repeat application, as necessary, every 7 days. Do not make more than 5 applications per sesson.
			Do not apply within 14 days of hervest.

Note: Tops may be sed to beel and dairy animals.

Grassiand insects

Ditch Banks, Roadeldes, Westeland, Honcrop Areas, Berrier Strips

Grasshoppers: Spray 14-1 pt. per acre in water (minimum of 1 gal, of water per acre) for aerial applications or a minimum of 5 gats. Of water per acre for ground applications or in oil (a minimum of 1 gal, of oil per acre) when insects first appear, preferably in the rrymphal stage. Thorough coverage of the foliage is essential.

Do not graze or use treated grass for forage or feed.

Insect Control on Ornementals

To control certain insects on Arbonvitae, Azalea, Birch, Boxwood, Camellie, Carnation, Chrysanthemum, Douglas Fix, Elm, Gladioli, Hawthorn, Holly, Juniper, Lilac, Locust, Maple, Oak, Pine, Ornamental Plum, Poplar, Rhododendron, Rose, Spruce and Willow, apply this recommended rates indicated below, Try to apray underside of leaves and penetrate dense foliage...

•	Amount of Diszinon 4 Spray: to Use	
Insects	Rate For 3 Gala. Water 16	Rate Per 100 Gale. Water
Aphids, Begworms, Carnetion Bud Mises, Carnetion Shoot Mites, Clover Mites, Cyclamen Mises, Dipterous Leatminers, European Pine Shoot Moths, European Red Mites, Flee Beetles, Holly Bud Moths, Lesthoppers, Obscure Root Weevils, Omnivorous Leaftiers, Privat Mites, Scale Crawlers (Cottonycushion, Lecanium, Pine Needle, San Jose, Sott), Thrips, Two-spotted Spider Mites, Juniper.	1/2 ft. oz.*	1 pt.**
Apple-and-Thorn Sheletonizers, Cotoneaster Webworms, Fall Webworms, Hemlock Chermes, Oak Loopers, Obliquebanded Leakullers, Peer Slugs, Tent Caterpitars	1½ N. oz.*	3 pts.**

^{*1} ft. 0z. = 2 tablespoons

Precaution: Do not use on Ferns, Poinsettle, Hibiscus, Papeye, Pilee, and Gardenia, since injury to the plants may occur.

Mimosa Webworms: Mix V₂ ft. cz. in 3 gala, of water (or 1 pt. in 100 gals, of water) and apply as a thorough foliar spray when adults first appear. Make a second and third application at 4-5 week intervals.

Lawn Feet Control (Excluding Golf Courses and Sod Forms)

Proceutions: Birds, especially weterlout, feeding or drinting on treated areas may be killed. Apply this product only as specified on this label. Because of the migratory habits of carein waterlout, do not apply in Nassau County. New York between November 1 and klay 20. Do not exceed maximum permitted label rates, since rates above those recommended significingly increase potential hazards to birds, especially testeriout. Avail overlapping sprays. If waterlook, i.e., ducks or gazos, cut to expected to enter the treated area after treatment (excert appl treatments), water lawn with at least 1/2 inch water imfractions) after application, however, stop watering before pudding occurs.

^{** 16} fl. oz. = 1 pint

To control pests listed below, apply recommended rates.

Post	Rete/1000 eq. ft.		
	Diazinon 4 Spray	Weter	Remarks
Lawn Chinch Bugs	2-3 ft. oz.	3 gals.	Use higher rate for tonger residual control and in fewers of dense growth such as St. Augustine teams.
Ants, Armyworms, Bermudagrase Mites, Clover Mites, Criclets, Cutworms, Digger Wasps, Earwigs, Frit Files, Lewn Billbugs, Leathoppers, Sod Webworms (Lawn Moths), Sowbugs (Pillbugs), Springtells (Collembols)	2-3 8. cz.	3 gais.	Spot spray ant hills and weep ground neet openings. For digger weeps, apply at dusk when weeps are not active.
			For lift files, mow grass and water well before treatment, but delay application until grass is dry.
			For billibug control, apply when activity is first observed or when chewed or brown grass is present, indicating damage from this insect.
Brown Dog Ticks, Chiggers, Flees			Note: Do not apply to enimals.
	3 ft. 62.	3 gels.	For brown dog ticks, spray grass and under shrubbery, particularly near house.
Hyperodes Weevils	3 fl. coz.	3 gals.	Treat problem areas in mid-April and again in mid-May
Millipedes	31.02	3 gale.	
Rhodesgrasa Scales	3 fl. oz.	3 gala.	Apply when crawlers first emerge.
White Grubs (such as Japanese Beetle Larvae, European Chaler, Southern Chaler)	3 fl. oz.	3 gals.	Apply any time between late July and early October.

Nulsance Pests in Outside Areas

Ants, Boselder Bugs, Brown Dog Ticks, Chiggers, Clover Mites, Cockroaches, Criclets, Earwigs, Flees, Files, Millipedes, Sowbugs (Pillbugs), Spiders, Springtails (Collembole)

Mix 3 ft. oz. in 3 gais, of water and thoroughly apray window and door screens, sills, foundations, porch and patio walls, entranceweys, walks, garbage cans, tree trunks, and into cracks and other places where insects can hide. To prevent entry into houses, spray a five-loot bend of soil around the house wat to the foundation and apray the foundation of the house to a height of 2-3 feet. Repeat application as necessary. Do not apply to animals. Do not treat plants (other then tree a trunks) at this nulsance pest rate.

Storage and Disposal

Do not contaminate water, food, or feed by storage or disposal. Open dumping is prohibited.

Pesticide

Pesticide wastes are toxic. Improper disposal of excess pesticide, spray mixture, or rinsate is a violation of federal law. If pesticide, spray mixture or rinsate cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

Containe

Triple runse (or equivalent). Then puncture and dispose of in a sanitary landfill, or incinerate, or burn, if allowed by state and local authorities. Stay out of smoke from burning container.

For minor spills, leaks, etc., follow all precautions indicated on this label and clean up immediately. Take special care to avoid contamination of equipment and facilities during cleanup and disposal of wastes.

Precautionary Statements

Hazards to Humans and Domestic Animals

CAUTION

Harmful if swellowed, inheled or absorbed through skin. Causes moderate eye injury. Avoid contact with skin, eyes, or clothing. Avoid breathing vapor or spray mist. Wash thoroughly with soap and water after handling and before eating or smoking. Remove contaminated clothing and wesh before reuse. Avoid contamination of food and feed. Food utereits such as table spoons and measuring cups should not be used for food purposes after use in measuring pesticides. Keep out of reach of domestic animals.
