

DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons either directly or through drat. Only protected handlers may be in area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This standard contains requirements for the protection of agricultural workers on farms, forests, nurseries and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this tabel about personal protective equipment (PPE), notification to workers, and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 24 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is: A) Coveralis; B) Waterproof gloves; C) Shoes plus socks; D) Protective eyewear.

STORAGE AND DISPOSAL

- 1. Prohibitions: Do not contaminate water, food or feed by storage or disposal.
- 2- Pesticide Disposal; Wastes resulting from the use of this product may be disposed of on site or at accoroved waste disposal facility.

^{3.} Container Disposal: Completely empty bag into application equipment. Then dispose of empty bag in a sanitary landfill or by incineration, or, if allowed by State and local authorities, by burning, if burned, stay out of smoke.

Storage: Store in original container only and keep sealed. Store in closed storage areas. Use causion when shoving, opening, closing or pouring. Store in a dry place.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMAN AND DOMESTIC ANIMALS

Causes moderate eye initation. Harmful if absorbed through skin, Avoid contact with skin, eyes or clothing. Wash thoroughly with soap and water after handling.

PERSONAL PROTECTIVE EQUIPMENT

Applicators and other handlers must wear: A) Long sleeved shirt; B) Long pants; C) Waterproof gloves; D) Shoes plus socks; E) Protective every every follow manufacturer's instructions for deaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

ENVIRONMENTAL HAZARDS

Do not apply directly to water, to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment wash waters. Do not apply when weather conditions favor drift from treated areas.

PHYSICAL HAZARD

Suffur dust suspended in air ignites easily. Keep away from heat, sparks, or flame. Do not smoke while applying this product.

USER SAFETY RECOMMENDATIONS

User should: 1) Wash hands before eating, drinking, chewing gum, using tobacco or using the toter; 2) Remove clothing immediately it pesticide gets inside. Then wash thoroughly and put on clean clothing; 3) Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

MDUNG INSTRUCTIONS: Pour recommended amount of GOLDEN-DEW into 1/3 filled spray tank. Add balance of water to fill tank. Keep agitator running during filling and spraying operations. Do not allow modure to stand. Do not use in low-volume gear-type spray equipment.

÷

1.140

APPLICATION INSTRUCTIONS: The desired ratio of GOLDEN-DEW to water should not exceed 2 pounds per gallon. Concentrated Application: Field: Specified rate in 5 to 10 gallons of water per acre. Orchard: Specified rate in 20 to 100 gallons of water per acre.

Ditute Application: Field: Specified rate in 20 to 50 gallons of water per acre. Orchard: Specified rate in 200 to 400 gallons of water per acre. Aerial Application: Field: Specified rate in 3 to 20 gallons of water per acre. Orchard: Specified rate in 10 to 20 gallons of water per acre.

- --

CHEMIGATION: Do not apply this product through any infgation system unless this chemigation section is followed. Apply this product only through sprinkler (center pivot, lateral move, end tow, side or wheel roll, traveler, big gun, solid set, or hand move) imgation systems.

Crop injury, tack of effectiveness, or itegal pesticide residues in the crop can result from non-uniform distribution of treated water.

If you have questions about calibration, you should contact State Extension Service specialists, equipment manufacturers or other expens.

Do not connect an impation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label-prescribed safety devices for public water systems are in place.

A person knowledgeable of the Chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustment should the need arise.

CHEMIGATION SYSTEMS CONNECTED TO PUBLIC WATER SYSTEMS 1.) Public water system means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year.

2.) Chemigation systems connected to public water systems must obtain a functional, reduced-pressure zone, backflow preventer (RPZ) or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system should be discharged into a reservoir tank prior to pesticide introduction. There shall be a complete physical break (air cap) between the outlet end of the fill pipe and the top or overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe.

The pesticide injection pipeline must contain a functional, automatic quick-closing check valve to prevent the flow of fluid back toward the injection pump.

4.) The pasticide injection piceline must contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the imigation system is either automatically or manually shut down.

5.) The system must contain functional interlocking controls to automatically shut of the pesticide injection pump when the water pump motor stops, or in cases where there is no water pump, when the water pressure decreases to the point where pesticide distribution is adversely affected.

6.) Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

7.) Do not apply when wind speed favors drift beyond the area intended for treatment.

8.) Apply at rate specified on the container label for individual crops. Do not allow mixture to stand. Keep agitator running during application. Apply at end of inigation period. Do not operate irrigation system after application until deposit has thoroughly dried.

SPRINKLER CHEMIGATION 1.) The system must contain a functional check valve, vacuum relief valve, and low pressure drain appropriately located on the impation pipeline to prevent water source contamination from backflow.

2.) The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.

3.) The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the inigation system is either automatically or manually shut down.

4.) The system must contain functional interlocking controls to automatically shut of the pesticide injection pump when the water pump molor stops.

5.) The inigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected. continued on next page

yof 8

Directions for use continued

E) Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed with pesticides and capable of being fitted with a system interiock.

·-----

7.) Do not apply when wind speed favors drift beyond the area intended for treatment.

8.) Apply at rate specified on the container label for individual crops. Do not allow modure to stand. Keep agitator running during application. Apply at end of imigation period. Do not operate imigation system after application until deposit has thoroughly dried. .

- 30 Do not use suffur with oil or within two weeks of an oil application unless in a domant, delayed domant, or postharvest application. For citrus, do not apply within 21 days of an oil spray. When growing crops for processing, consult the processor before applying suffor.
- For control of MITES, use the higher rates shown under conditions of high pest pressure. For control of FUNGI, use higher rates shown when weather conditions indicate a potential for increased pest pressure.
- Sulfur will cause severe truit and leaf injury to sulfur sensitive crops. Do not allow this material to drift onto sulfur sensitive Melons, Squash, Cucumbers, Apricots or other plants which may be injured by sulfur,

Do not apply when shade temperatures exceed or are likely to exceed 90°F. Sulfur may burn foliage and fruit during periods of high temperatures and under certain climatic conditions.

Consult with State Agricultural Experiment Station or State Agricultural Extension Service personnel for additional information consistent with label cautions and directions.

COMPATIBILITY: GOLDEN-DEW is compatible with most pesticides. Because conditions vary a small amount of the pesticide should be mixed prior to application to examine their compatibility. ALWAYS ADD THE PESTICIDE INTO THE MIXED GOLDEN-DEW. WILBUR-ELLIS recommends the use of a surfactant such as Sylgard 309 to improve coverage.

RECOMMENDATIONS FOR USE

FIELD CROPS

Sidd	Pesite and the		Directors
Alfalfa	Lygus Pacific Mite Strawberry (Atlantic) Mite Red Spider Mite	10-20 lbs/acre	Repeat at 1 to 2 week intervals as needed.
Cereals: Com, Wheat, Barley, Oats, Rye, Sorghum	Two Spotted Mite Grass Banks Mite Pacific Mite Atlantic Mite (small grains only) Red Spider Mite Powdery Miteew	6-15 lbs/acre	Apply when disease first appears or when mites appear on bottom leaves and repeat as necessary.
Clover	Powdery Mildew Rust Spider Mites	15-20 lbs/acre	Apply when crop is in bud stage or at first sign of disease or mites. Repeat at 7-10 day intervals or as necessary.
Cotton	Red Spider Mite Atlantic Mite	2-10 lbs/acre	Begin when infestation first occurs and repeat at 1 to 2 week intervals as necessary or with
