For slurry treaters, Nu-Zone 10ME may be diluted with water, not to exceed 7 fl. oz. additional water per 100 lbs. of wheat and barley seed or 20 fl. oz. water per 100 lbs. of cottonseed.

**NOTE TO USER:** Combination treatments of Nu-Zone 10 ME with products containing lindane may result in delayed emergence and stunting of wheat and barley, however, plants will usually outgrow this effect. Do not carry over seed treated with lindane to the next crop season. Minimize time between treating and planting for such treatments.

Treatment of highly mechanically damaged seed, of known low vigor and poor quality, except for the purposes of curative control of existing disease or insect pests, can result in reduced germination and/or reduction of seed and seedling vigor. Treat and germination test a sample of the seed lot before treating with a selected chemical treatment. Excess seed should not be carried over from one season to the next without re-testing germination. Due to seed quality conditions beyond the control of Wilbur-Ellis, no claims are made to guarantee germination of carry-over seed.

It is impossible to eliminate all risks inherently associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as weather conditions, presence of other materials, or the manner of use or application, all of which are beyond the control of Wilbur-Ellis Company.
