EPA Reg No. 3125-116
DI-SYSTON Systemic Insecticide Granules

In accordance with EPA PR Notice 93-3, we are notifying the Agency that the statement on our current label for application to water or wetlands under the Environmental Hazards section is being changed to that which is required by PR Notice 93-3. The following specific changes were made to the Environmental Hazards section. Shaded areas indicate additions to the currently accepted label, strikeouts indicate deletions to the currently accepted label.

This pesticide is toxic to fish and wildlife. For terrestrial uses, do not apply directly to water ~~or wetlands~~, or to areas where surface water is present or to intertidal areas below the mean high water mark. Drift and runoff from treated areas may be hazardous to fish in neighboring areas. Do not contaminate water by disposing of equipment washwaters. Cover or incorporate spills.

This pesticide is toxic to bees exposed to direct application. Applications should be timed to coincide with periods of minimum bee activity, usually between late evening and early morning.

HOW INSECTS ARE KILLED: DI-SYSTON Systemic Insecticide enters a plant through its roots (systemic action) to the soil around the base of the plant. Mix the granules into the top soil, then water. The chemical, released from the granules, will leach into the root zone and be absorbed into the plant. The granules can also be scattered over planting beds and mixed into the top soil before sowing seed or setting bulbs or transplants. Additional applications of DI-SYSTON Systemic Insecticide Granules can be made as needed to maintain insect control after the plants start to grow.

NOTE: THE CAP OF THIS CONTAINER, LEVEL FULL, HOLDS APPROXIMATELY ONE ROUNDED TEASPOONFUL OF DI-SYSTON GRANULES. *(Printer see below).
