DIRECTIONS FOR USE

[illegible] GOPHACIDE 0.2% Bait

CONDITIONS OF SALE: These Directions for Use reflect the opinion of experts based on tests of effectiveness, toxicity to plants and laboratory animals, under normal conditions of use. However, because of the wide range of conditions under which this product may be used, even though label directions are followed, it is impossible to eliminate all risks associated with its use because of abnormal conditions beyond the control of the seller, Chemagro, and the seller offer, and the Buyer uses, this product subject to the understanding that the Buyer assumes all such risks.

GOPHACIDE 0.2% Bait is very effective for the control of the valley (*Thomomys bottae*) pocket gopher. Bait preparations are readily accepted and death usually occurs within 24 to 48 hours after the bait is eaten. The mountain (*Thomomys idahoensis*) and plains (*Geomys bursarius*) gophers are also controlled by this concentration.

HOW TO APPLY

ARTIFICIAL BURROWS. Place the bait in artificial burrows made with suitable burrow building equipment. Use 1½ pound of GOPHACIDE 0.2% Bait per acre in burrows spaced at 20-foot intervals or 1 pound per acre in burrows spaced at 30 foot intervals.

NATURAL BURROWS. Use 1 pound of GOPHACIDE 0.2% Bait per acre to treat natural burrows.

RESTRICTIONS

For use only by personnel experienced in rodent control. Consult your local, county or state rodent control experts for advice on how to best use this product safely and efficiently. Apply only in burrows. Do not use above ground surface. Control of other rodent species is not recommended, since evaluations have not yet been completed.

FISH AND WILDLIFE CAUTION

This product is toxic to fish and wildlife. Keep out of any body of water. Treated bait exposed on soil surface will be hazardous to birds and other wildlife. Apply this product only as specified on this label. Do not contaminate water by cleaning of equipment or disposal of wastes.
