(R)

MESUROL

2% Bait

MOLLUSCICIDE

ACTIVE INGREDIENT:

3,5-Dimethyl-4-(methylthio)phenol methylcarbamate 2%

AMENDMENT

To Previously Registered Labeling

Revise as follows:

DIRECTIONS FOR USE

MESUROL 2% Bait is very effective for the control of slugs and snails infesting lawn and turf, ornamental ground covers, flowers and shrubs when applied as ground or aerial broadcast applications. Applications may be made to areas around the home, in flower gardens, in ornamental greenhouses and to other areas such as golf courses, cemeteries, industrial grounds, parkways and roadways. The bait should be broadcast over plant foliage or applied to the soil around plants. For best results, the soil in the area to be treated should be moist prior to application and the bait broadcast evenly so as to be hardly visible on the ground. CAUTION: Do not use around food crops.

Apply broadcast applications as specified above at the rate of 35 to 50 pounds per acre when treating large areas. For smaller areas, applications should be made at a rate of 1 pound MESUROL 2% Bait per 1,000 square feet of treated area. When making such applications, special attention should be given to treating areas around flower beds, under greenhouse benches and around building foundations. Repeat applications as necessary to keep areas free of slug and snail pests.

Those use patterns indicated by underlining have not previously been granted registration.
