

375-6162.YLD

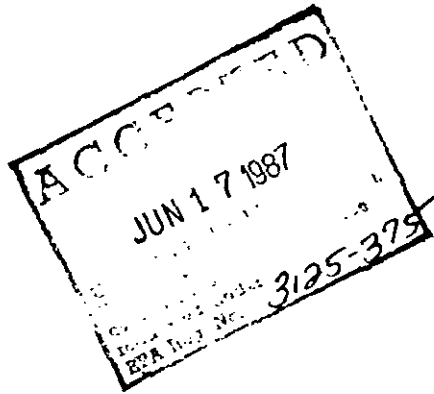

Base Pre-Reg (6162)

U.S. LABEL

Date of Draft: 5/19/87 (Pre-Reg) (H)

Reason to Issue: To revise mixing procedure for SALUTE 4EC alone and in tank mix combinations.

EPA Reg. No. 3125-375

SALUTE™ 4EC

Herbicide

ACTIVE INGREDIENTS:

- Trifluralin, a,a,a-trifluoro-2,6-dinitro-N,N-dipropyl-p-toluidine 28%
- Metribuzin, 4-amino-6-(1,1-dimethylethyl)-3-(methythio)-1,2,4-triazin-5(4H)-one 14%

AMENDMENT TO PREVIOUSLY REGISTERED LABELING

REVISE TO READ AS FOLLOWS:

MIXING: When using SALUTE 4EC, make sure the sprayer is completely clean, free of rust or corrosion which may occur from winter storage. Examine strainers and screens to be sure the sprayer is clean from previously used pesticides.

Any tank mix containing SALUTE 4EC should be kept minimally agitated and sprayed out immediately, especially under cool weather conditions. Do not allow tank mixes to stand for prolonged periods of time.

When using water that is extremely hard, add 1/2 pint of Ortho X-77 (do not substitute) spreader sticker per 100 gallons of spray mixture. This should be added to the spray tank when at least 1/2 full, but prior to the addition of any herbicide.

The proper mixing procedure for SALUTE 4EC alone:

1. Fill spray tank with the appropriate amount of water.
2. Add recommended rate of SALUTE.
3. Follow the triple rinse procedure to insure that all product is removed from the container.
4. Begin minimal agitation or recirculation until the herbicide is thoroughly mixed in the tank and spray out immediately.

SALUTE 4EC

When mixing SALUTE with other herbicides:

1. Fill spray tank 2/3 to 3/4 full of water and add other herbicide.
2. Finish filling the tank with the appropriate amount of water and add the recommended rate of SALUTE.
3. Follow the triple rinse procedure to insure that all product is removed from herbicide containers.
4. Begin minimal agitation or recirculation until the herbicides are thoroughly mixed in the tank and spray out immediately.
