**DIRECTIONS FOR USE:  
 GENERAL CLASSIFICATION**

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Start feeding Vita Plus Grist-N-Rich/Rabon® early in the spring before flies begin to appear, and continue feeding throughout the summer and into the fall until cold weather restricts fly activity.

Vita Plus Grist-N-Rich/Rabon® may be fed up to slaughter and to lactating dairy cows.

Vita Plus Grist-N-Rich/Rabon® prevents the development of horn flies, face flies, house flies and stable flies in the manure of treated cattle, but is not effective against existing adult flies. When starting a feeding program during the fly season, it may be necessary to use other control measures to reduce the population of existing adult flies.

Supplemental fly control measures may be needed in and around cattle lots and buildings to control adult house flies and stable flies which can breed not only in cattle manure but in other decaying vegetable matter or silage on the premises.

In order to achieve optimum fly control Vita Plus Grist-N-Rich/Rabon® should be used in conjunction with other good management and sanitation practices.
