

USDA Reg. No. 3240-17

MOTOMCO TRACKING POWDER

Kills Rats and Mice

Active Ingredient:

Calcium salt of 2-Isovaleryl-3-Indandione* 2.15%

Inert Ingredient

10.00%
*Equivalent to 2-Isovaleryl-3-Indandione

CAUTION

**Keep out of reach of children.
See right side panel for additional cautions**

NET WEIGHT 100 GMS (3.52 OZ)
EPA REG. NO. 3240-17

Net Content: 100 GMS

DIRECTIONS

Motomco Tracking Powder is a fine powder in a paper-thin layer to rat and mouse runways. In protected areas such as construction voids, closed attics, crawlways and other dead spaces, it can be applied with a squeeze bulb or other small duster. If such protected areas are not available, it should be used in stationary bait boxes or tubelike devices placed along walls in attics, basement, garage & outside building.

CAUTION

Motomco Tracking Powder must be protected from children and placed where it will not be contacted by humans, livestock, poultry, wildlife and pets. Wash hands after using and avoid breathing dust. If taken internally, contact physician immediately.

The active ingredient of this product is a toxic chemical. Care should be used in placement and during application to prevent air currents from carrying the dust to other areas. Care must be taken to avoid possible contamination of food, feed, toys, pharmaceutical or cosmetic materials. After completion of the program, clean up remaining dust.

ANTIDOTE: In case of ingestion by human, induce vomiting by giving a tablespoon of salt water with warm water and repeating until vomited. Call a physician immediately. Treatment should include the administration of 100 mg intravenous injection of Vitamin K₁. In case of ingestion by animal, follow with fresh whole blood transfusion.
