DIRECTIONS FOR USE

- Before using Giant Maxi-Clor Tablets make sure that there is a sufficient chlorine residual (3,5-5,0 ppm) in the swimming pool by superchlorination. Next day add 1 lb. Chlorine Stabilizer (Booster) for each 4,000 gallons of water
- Place approximately 1 giant tablet for 5000 gal.
 water per week either into a tablet dispenser and
 float it in the pool or directly into skimmer basket
 if one is available. In no case should tablets be
 thrown directly into or on a vinyl liner as bleaching will result.
- 3. A good pool water test kit should be used at least once a day to check both pH and chlorine levels. pH should be between 7.2-7.6 and adjusted as necessary. Chlorine should be between 1-2 ppm. If chlorine level is too low add more tablets until there is enough to maintain the 1-2 ppm.

This product can be used in any dispenser that uses Chloring Concentrate tablets or sticks. Should not be mixed with any other find it ablaring an explanation could what

DIRECTIONS FOR USE

- Befole using Giant Maxi-Clor Tablets make sure that here is a sufficient chilorine residual (3.5 - 5.0) ppm in the swimming pool by superchlorination. Next day add 1 lb Chlorine Stabilizer (Booster) for each 4,000 gailons of water.
- 2. Place approximately in grant tablet for 5000 gain water per week either into a tablet dispenser and float it in the pool or directly into skimmer basket if one is available. In no case should tablets be thrown directly into or on a vinvi liner as bleaching vill result.
- 3. A good pool water test kit should be used at least once a day to check both pH and chlorine levels. pH should be between 7.2-7.6 and adjusted as necessary. Chlorine should be between 1-2 ppm. if chlorine level is too low add more tablets until there is enough to maintain the 1-2 ppm. This product can be used in any dispenser that uses Chlorine Concentrate tablets or sticks. Should not be mixed with any other kind of chlorine as an explosion could result.

NOTE: During heavy bathing loads, very hot weather, rain, etc. and at least once a week, chlorine residual should be raised to 3.5-5 ppm with granular chlorine (superchlorinated). It is preferable to do this after swimming day so that pool will have a chance to come back to the 1-2 ppm before swimmers go back in next day. Giant tablets will last approximately 5-7 days depending upon temperature and amount of water flow since there are approximately 3 tablets to the pound. A 1 lb. jar will last a 5000 gal. pool 21 days; 10,000 gal. approximately 10 days; 30,000 gal. pool approximately 3½ days.
