FACTS ABOUT CHINCH BUGS

Chinch bugs are small, dark, wingless insects that feed on the roots of grasses. They are most common in the Southeastern United States and are a major cause of lawn damage. Chinch bugs are most active during the summer months and can cause significant damage to lawns if not controlled.

Heavy infestations may be controlled by using Vertagreen and making close inspection. If not revealed by this method, remove the grass and replace it with a new variety of grass. The chinch bug is most active during the summer months and is most common in the Southeastern United States.

DIRECTIONS FOR APPLYING

WHEN TO APPLY: Apply Vertagreen to lawns that chinch bugs are at work. As a preventative, use as soon as weather conditions are favorable and before the chinch bug season begins. Apply before the chinch bug season begins.
