SIDE PANEL

DIRECTIONS

Initial Treatment

1. Check pH of pool with UTIKEM TEST KIT. Adjust pH if needed with UTIKEM ALKAMIN or ALKAPLUS.
2. Add 1 oz. of UTIKEM CHLORO-PURE for every 500 gallons of pool water.
3. Add UTIKEM CHLORINE STABILIZER using $1\frac{1}{2}$ lbs. for every 5000 gal. of water. Add UTIKEM POOL STABILIZER after chlorine residual has been checked with UTIKEM TEST KIT.
There is no need to add UTIKEM CHLORINE WATER STABILIZER after initial treatment.

HOW TO MAINTAIN PROPER CHLORINE LEVEL

Chlorine level should be maintained at 0.6 to 1.0 P.P.M. (parts per million of available chlorine as determined by test kit). After initial treatment (see above), add 2 $\frac{1}{2}$ oz. per 5000 gal. of water as needed. Daily checking with your UTIKEM TEST KIT will advise you of the need for adding UTIKEM CHLORO-PURE. Maintain proper pH of 7.2-7.6 for optimum results. In hot water or where many people use the pool, it may be necessary to increase the quantities used.
