For control of large and small mushroom flies - pinworms and many other insects.

TUNIS 15% PARZATE

A fungicide for the control of growth on mushrooms.

TUNIS N-66 MUSHROOM SPRAY CONCENTRATE

Tunis N-66 is a powerful insecticide for use in controlling mushroom flies and thereby reducing the chance of heavy fly infestation with resultant damage to the crop. It is recommended for use in the Tunis Fog Gun for best results. This electric atomizer distributes the spray evenly throughout the mushroom room and the flies must then fall power to cracks and crevices more effectively.

DIRECTIONS FOR USE

Use Tunis N-66 full strength at the rate of 1 pint per 60 foot double house. Place Tunis Fog Gun in one end of the house for complete operation in upper and lower levels. It is not necessary to carry the Fog Gun through the house three times, down middle aisle. Do not apply within 24 hours of harvest. Prior to spraying lay boards as dry as possible and approximately 60° F. Close doors and windows. Leave them closed as long as possible, at least for one or two hours.

Tunis N-66 Concentrate may be used throughout the growing season. When used as directed it will not injure or hurt mushrooms. Begin spraying as soon as flies are spotted. It is important that flies be kept under control at the beginning of the crop to prevent a build up of fly eggs and larvae in the beds. Spray once a week throughout season or more often in case of severe infestation.

The company, in the interest of making beyond our knowledge and control we make no warranty, either expressed or implied, as to the effect of such use, whether used in accordance with directions or claimed so to be.
