MILLSPRAY CONCENTRATE: An insecticide concentrate especially designed for control of certain common insect pests found about food handling, food processing and food storage plants. Foods should be removed or covered during treatment. All food processing surfaces should be covered during treatment or thoroughly cleaned before using. When a residue persists, the residue should be washed off with water. When properly diluted this concentrate is a powerful control flying insect on all surfaces to which it is applied. Do not breathe fumes.

DIRECTIONS

Space Spray - For the rapid control of flying insects such as flies, gnats, mosquitoes, dilute 1 gallon concentrate with 9 gallons of water or oil and apply in a good sprayer adjusted to deliver fine wet particles. Direct diluted spray towards the upper portion of the volume, filling the air with mist. Use 2 to 3 ounces per each 1000 cu. ft. of space. For best results keep all doors and windows closed for 15 minutes after application. Do not remain in treated area and ventilate the area after treatment is completed.

Surface Spray - For effective initial control of running and crawling insects such as ants, roaches, crickets, spiders, silverfish, exposed fleas, mites, bean mites and flour mites, dilute 1 gallon of concentrate with 9 gallons of water or oil and apply in a good machine adjusted to deliver coarse, wet particles. Apply at the rate of 1 gallon diluted material to each 750 sq. ft. of surface area. Spray walls, floors, tables, racks, corners, crevices, recesses, baseboards, moldings, with special attention to the most likely breeding places.

Repeat treatment where necessary with material diluted at the rate of 1 gallon concentrate to 9 gallons of water or oil. Apply 1 gallon of diluted material per each 750 square feet of surface area.
