QUALITY PRODUCTS SINCE 1885

DOLFINITE 3905-TX FUNGICIDAL

DOLFINITE 3905-TX is a flexible slow-oxidizing, non-bleeding compound containing Pentachlorophenol and other fungicidal properties that will retard, and when used in ample quantity, will provide the best known protection against dry rot and decay due to moisture and fungus growth, etc.

USES: 3905-TX is recommended for bedding in transoms; knee braces; stringers; keel; keelson; stems; sternposts; battens; and other wooden hull members. Ideal for bedding in all deck fittings, mouldings, and deckhouse mouldings.

APPLICATION: Easily applied by knife, gun, or serrated trowel. Its semi-paste consistency allows excellent film thickness control.

BOAT BUILDER: Double-planking construction. Apply a liberal coat with a serrated trowel on the inner layer of planking before laying the outer planking. If thinning is desired only Dolfinite 1481-TX thinner should be used. Use of any other material could destroy the fungicidal qualities.

CLEANUP: Remove excess material with a putty knife and wipe clean with a cloth dampened with mineral spirits.

CAUTION: CONTAINS PENTACHLOROPHENOL AND PETROLEUM DISTILLATE: Harmful if swallowed. Avoid contact with eyes and with skin. Contaminated shoes and clothing should be removed promptly and skin thoroughly washed with soap and water. For eyes, flush with plenty of water for at least 15 minutes and get medical attention. Close container after each use.
