CAUTION: KEEP OUT OF REACH OF CHILDREN

Cotton: To control Boll Weevil, Bollworm, Cotton Leafworm, Lygus Bugs, Cotton Leaf Perforator, Thrips, and Cotton Fleahoppers follow State recommendations for frequency and timing of applications. Usually for early season control, two to three applications should be made at 7 to 10 day intervals. Apply at the rate of 15 pounds per acre. For mid-season control, apply 20 pounds per acre. Repeat application at 5 to 7 day intervals until infestation is brought under control. Usually four applications will be necessary. Repeat a series of four applications at 5 to 7 day intervals if boll weevils reappear in sufficient numbers to cause damage. For late season control, apply at the rate of 25 pounds per acre at 5 to 7 day intervals. Anytime bollworms are a threat, when as many as 4 to 5 small worms and eggs are found per 100 terminals examined, apply at the rate 20 - 25 pounds of dust per acre. Direct the dust down ward into the tops of the plant where the worms are hatching. Repeat applications at 5 day intervals until infestation is controlled. The early season dosages will control only thrips, cotton fleahoppers, and cotton leafworms. Suppression of aphid populations may be obtained by repeated applications.

CAUTION: HARMFUL IF SWALLOWED OR INHALED! Do not inhale internally. Avoid breathing dust. Avoid contact with eyes. Do not get on skin. Do not get on treated clothing. Do not get on treated surfaces. Do not get on treated fields. Do not get on treated animals. Do not get on treated plants. Do not get on treated food. Do not get on treated water. Do not get on treated air. Do not get on treated soil. Do not get on treated ground. Do not get on treated objects. Do not get on treated materials. Do not get on treated products. Do not get on treated services.
