READ FOLLOWING CAREFULLY BEFORE APPLICATION

USE THIS PRODUCT ONLY FOR RECOMMENDED PURPOSES AND AT

This product is designed for the pre-emergence control of annual weeds such as grass, green and yellow foxtail, common chickweed, Florida pusley, lamb's ears in lawns. When used as recommended, it will not harm established plants or weeds for an entire season by killing plants as seeds germinate.

DIRECTIONS FOR APPLYING

WHEN TO APPLY: This product must be applied in early spring before the exception of common chickweed, these weeds may germinate any time with night temperatures above 65° F. for 3 to 6 days.

SEEDING: The ideal time to sow lawn seed is in the fall. If spring seeding is necessary, do so early enough so there is a noticeable green stand of grass before deadening. As an alternative, apply this product as soon as the frost is out for approximately 60 days. The shorter the waiting period, the more insure a desirable stand. Delay of less than 30 days is not recommended.

COMMON CHICKWEED: This weed thrives in cool weather. In some areas and spring; in others, depending on the weather, it grows anytime. To control that you use this product to prevent new plants from developing for a season.

HOW TO APPLY: Use a fertilizer spreader per guide shown below.

SPREADER SETTING GUIDE

Spreader settings are approximate and are based on an average walking speed. slower speed; raise setting for higher speed.
