Warfarin — Wisconsin Alumni Research Foundation.

This rodenticide contains warfarin, an anti-coagulant chemical that reduces the clotting ability of the blood and, upon repeated feedings, causes fatal hemorrhage in rats and mice.

DIRECTIONS FOR USE

Place baits in locations not accessible to children, pets and domestic animals, or in tamper proof bait boxes.

Directions for use of rat bait: Place 4 to 6 ounces of bait in dry containers next to burrows, in runways, or where rats are accustomed to feed. Assure an uninterrupted supply of bait for a period of not less than 10 days and continue baiting until all signs of feeding have stopped. Replace stale, damp or moldy bait with fresh bait.

Directions for use of mouse bait: Place tablespoonful amounts of bait in shallow containers where mice or signs of mice have been seen. Bait stations at intervals of 8 to 12 feet are recommended. Assure an uninterrupted supply of bait for a period of at least 15 days.

CAUTION

Keep away from humans, domestic animals, or pets. Protect children, pets and domestic animals from bait. If swallowed by humans, domestic animals, or pets, the material may reduce the clotting ability of the blood and cause bleeding. In such cases, intravenous and oral administration of Vitamin K combined with blood transfusions are indicated as in the case of hemorrhage caused by overdose of heparin or coumatel.

NOTE FOR PHYSICIANS

When a human has been known to have received this material, blood transfusion combined with intravenous or injection of oral doses of Vitamin K are indicated as in the case of hemorrhage caused by overdose of heparin or coumatel.

USDA Reg. No. 1-19-0001

Economy
RAT-WAR
WARFARIN
RAT and MOUSE
KILLER

ACTIVE INGREDIENTS:

Warfarin [5-(3-methyl-4-benzyl-4-hydroxy-5-oxo-1-phenyl-1H-tetrazol-5-yl)-1,3-dimethyl-1H-tetrazol-5-one]

INERT INGREDIENTS:

CAUTION

KEEP OUT OF THE REACH OF CHILDREN

See side panel for additional cautions.

NET WEIGHT 1 LB.
