

U.S.D.A. Reg. No.....

RIGHT-A-WAY BRUSH-KILLER SEMI-CONCENTRATE

3797-3

Containing Powerful Low VOLATILE ESTERS of 2, 4, 5-T
READ DIRECTIONS ON THE LABEL AND FOLLOW THEM AT ALL TIMES
EASY TO USE — Apply with Sprinkler, Knapsack Sprayer or Power Sprayer
FOR THE CONTROL OF TREES AND BRUSH

Weight per gallon	6.9 pounds
Active Ingredient	
2, 4, 5 — Trichlorophenoxyacetic acid,	
Propylene Glycol (C ₃ H ₈ O to C ₃ H _{7.5} O ₂)	
Butyl Ether Esters	7.4
2, 4, 5-Trichlorophenoxyacetic Acid Equivalent 4.70	
Inert Ingredients	92.6

DIRECTIONS

RIGHT-A-WAY BRUSH KILLER is recommended for use in controlling herbaceous and woody plants growing in fence rows, ditch banks, farmyards and right-a-way, including certain 2, 4-D resistant plants such as ash, brambles, ground cherry, hawthorn, horse nettle, maple, mesquite, oak, osage, orange, palmetto, poison ivy, prickly pear cactus, salmonberry, wild blackberry, wild rose, and certain species of Ribes.

SPOT TREATMENT: Use 3 to 4 quarts of Right-A-Way Brush Killer in 5 gallons of Diesel fuel or Kerosene. Wetting all foliage, shoot stems, and bark thoroughly.

FOLIAGE TREATMENT: Use 3 to 4 gallons of Right-A-Way Brush Killer in 30 gallon of Diesel fuel or Kerosene. Spray woody growth up to 6 to 8 feet tall after foliage is well developed, using a drenching spray. Poison ivy, most brambles, and some other species may be controlled by thoroughly wetting the plants. Coverage should be complete, and all parts of the plants, including foliage, shoot stems and bark, should be wet with the spray. For best results, make application soon after maximum foliage development in the spring. Less effective control may result during prolonged hot dry weather. Under good growing conditions, in humid areas, applications made up to three weeks before fall frost are usually effective. (Application in late summer and fall in some areas, including Texas and Oklahoma, is not recommended.) Spraying after leaves have lost their normal green color and vigor may not give satisfactory control. Repeat applications may be necessary if new growth develops, but a single treatment in any one year is usually sufficient.

For prickly pear cactus: During hot summer periods, apply spray thoroughly to both sides of pads (leaves) and to joints and trunks.

BASAL BARK TREATMENT: Mix equal parts of Right-A-Way Brush Killer with equal parts of Diesel fuel or Kerosene. Brush and small trees can be controlled by spraying the basal parts of brush stems and tree trunks to a height of 12 to 15 inches from the ground line, using RIGHT-A-WAY BRUSH KILLER. Knapsack or power equipment may be used but complete wetting of the indicated area is necessary, particularly at the ground line. This means spraying until run-down or run-off to the ground line is noticeable. Old and rough bark requires more spray volume than young or smooth bark. Low pressures are desirable. Apply at any time, including the winter months, except when snow or water prevents spraying to the ground line. Often delayed response and killing can be expected. Preferably, treated brush or trees should not be cut for a period of one year, following application.

STUMP TREATMENT: Mix equal parts of Right-A-Way Brush Killer with equal parts of Diesel fuel or Kerosene. Where growth is more than 6 to 8 feet tall, cut it close to the ground and spray the freshly cut stumps and stubs with RIGHT-A-WAY BRUSH KILLER. Wet thoroughly all exposed bark, as well as cut surfaces. This means spraying until run-down or run-off to the ground line is noticeable. Old and rough bark requires more spray volume than young or smooth bark. Apply at any time, including the winter months, except when snow or water prevents spraying to the ground line. Best results are obtained on freshly cut stumps two inches across or larger.

"FRILL" TREATMENT: Mix equal parts of Right-A-Way Brush Killer with equal parts of Diesel fuel or Kerosene. For larger trees, make a single-hack girdle or "frill" of overlapping axe cuts completely around the tree as close to the ground as possible. Treat the the injured area thoroughly with RIGHT-A-WAY BRUSH KILLER.

WARNING

Do not apply RIGHT-A-WAY BRUSH KILLER directly to, or otherwise permit it to come into contact with, vegetables, flowers, grapes, fruit trees, ornamentals, cotton, black locust or other desirable plants which are sensitive to 2, 4, 5-T and do not permit spray mists containing it to drift onto them, since even minute quantities of the spray may cause severe injury during both growing and dormant periods. (Coarse sprays are less likely to drift.) Accordingly, applications by airplane, ground rigs, and hand dispensers should be carried out only when there is no hazard from drift. Do not apply by airplane in the vicinity of cotton, grapes or other desirable 2, 4, 5-T susceptible vegetation. At higher temperatures vaporization may cause injury to susceptible plants growing nearby.

Do not use on lawns of creeping grasses, such as bent, except from spot spraying, nor on freshly seeded turf until grass has become well established. (Most legumes are usually damaged or killed.) Do not contaminate irrigation ditches or water used for domestic purposes. Do not store near fertilizers, seeds, insecticides or fungicides. Avoid contamination of feed and foodstuffs. To avoid injury to desirable plants, do not store, handle or apply other agricultural chemicals with the same containers or equipment used with RIGHT-A-WAY BRUSH KILLER.

Local conditions may affect the use of herbicides. State agricultural authorities in many states issue recommendations to fit local conditions.

Be sure that use of this product conforms to all applicable regulations.

CAUTION: MAY CAUSE SKIN IRRITATION
Avoid Contact with Eyes, Skin and Clothing

POISON

DANGER

KEEP OUT OF REACH OF CHILDREN:

This Herbicide is Toxic to fish. Keep out of lakes, ponds and streams. Do not apply to any area not specified on the label
SEE BACK PANEL FOR ADDITIONAL CAUTIONS AND ANTI-DOTE STATEMENT
