C. I. SPRAY FOR CRAWLING INSECTS

DIRECTIONS

For use in industrial plants, warehouses and commercial buildings.
TO KILL ROACHES, WATER BUGS AND SILVERFISH, spray with force into all cracks and crevices in moldings and woodwork, pipe openings in walls and floors, or wherever these insects are likely to hide, hitting as many insects as possible. Repeat the treatment as often as necessary.
Apply with hand or electric type spray gun onto surface in infested areas. This spray is a contact killer, but when properly applied, will also form a residual toxic film which is very effective in the control of roaches. Applications should be repeated as often as necessary.

CAUTION

Do not use in edible products areas of food processing plants, restaurants or other areas where food is commercially prepared or processed. Do not use in serving areas while food is exposed.

CAUTION

This solution, if brought into contact with skin, can cause toxic symptoms. Avoid inhalation and skin contact. In case of spillage on the skin, wash with soap and water. In case of swallowing, induce vomiting by administering an emetic. Call a physician. Avoid contamination of foodstuffs. Do not use on humans or household pets, or spray near fish bowls and birds. Keep away from open flame, store away from heat. This spray is not recommended for use on plants.

CAUTION

Do not reuse container. Destroy when empty.
