DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling

FOR USE IN INDUSTRIAL RECIRCULATING WATER COOLING TOWERS AND AIR WASHERS

ANCOCIDE 4010 is a highly effective fungicide, bactericide and algacide for use in controlling the growth of fungi, bacteria and algae found in industrial recirculating water cooling towers and air washers that maintain effective mist eliminating components.

Dosage for industrial recirculating water cooling towers or air washers will depend on the condition of the system prior to treatment initiation. Systems which are heavily contaminated should be cleaned first. Apply **ANCOCIDE 4010** to the cleaned system or when growth is first noticed, according to the following schedule.

Initial Dose: Apply 1 - 2 quarts of product per each 1000 gallons of water in the system. This dose may be repeated once, twice or three times weekly or as required to control the growth of slime forming organisms. Slug addition should be made in the sump of water cooling towers.

Subsequent Dose: When microbial control is evident add 1 quart of **ANCOCIDE 4010** per 1000 gallons of water in the system every three days or as needed.
